

Contents

1	Energy Revolution and Hydrogen Economy	1
1.1	Vision	1
1.2	Motivation	2
1.2.1	Population, Energy Demand and Resources	2
1.2.2	Emission, Immission and Health	5
1.2.3	Greenhouse Effect, Global Warming and the Environment	7
1.3	Implementation	10
1.3.1	Technological Approaches	10
1.3.2	Electro Mobility	11
1.3.3	Energy Revolution and Hydrogen Economy in Austria	19
2	Historical Notes	29
3	Fundamentals	43
3.1	Occurrence	43
3.2	Thermodynamic State	44
3.3	Substance Properties	51
3.4	Chemical Properties	53
3.4.1	Isotopes	53
3.4.2	Atomic Spin	54
3.4.3	Spectral Lines	56
3.5	Chemical Compounds	56
3.5.1	Hydrides	57
3.5.2	Compounds with Carbon	59
3.5.3	Decomposition of Hydrogen	60
3.6	Combustion	61
3.6.1	Gross Reaction Equation	62
3.6.2	Chemical Equilibrium	64
3.6.3	Reaction Kinetics	66

4	Production	69
4.1	Overview	69
4.2	Electrolytic Splitting of Water	70
4.2.1	Fundamentals	70
4.2.2	Electrolysis Systems	79
4.2.3	Power-to-Gas	87
4.3	Reforming	89
4.3.1	Steam Reforming	90
4.3.2	Partial Oxidation	91
4.3.3	Autothermal Reforming	92
4.4	Gasification	93
4.5	Purification	95
4.5.1	Purification of Feedstock	96
4.5.2	Purification of the Final Product	97
4.6	Direct Cracking of Hydrocarbons	98
4.7	Chemical Splitting of Water	99
4.8	Biological Production Processes	102
4.8.1	Enzymes for Hydrogen Production	102
4.8.2	Photolysis	103
4.8.3	Fermentation	104
4.9	Hydrogen as a By-product	105
4.9.1	Chlorine-Alkali Electrolysis	105
4.9.2	Gasoline Reforming	106
4.9.3	Ethene Production	106
5	Storage and Transport	107
5.1	Overview	107
5.2	Gaseous Storage	112
5.2.1	Compression and Expansion	112
5.2.2	Tank Systems and Infrastructure	114
5.3	Liquid Storage	118
5.3.1	Liquefaction and Compression	119
5.3.2	Tank Systems and Infrastructure	123
5.4	Hybrid Storage	129
5.5	Storage in Physical and Chemical Compounds	131
5.5.1	Physical and Chemical Adsorption	132
5.5.2	Chemical Absorption	133
6	Fuel Cells	137
6.1	Principle and Characteristics of the Fuel Cell	139
6.2	Types of Fuel Cells	147
6.3	Design of Fuel Cells	158

6.3.1	Single Cell	158
6.3.2	Cell Stack	161
6.3.3	Fuel Cell System	163
6.4	Application in Automotive Engineering	172
6.4.1	Powertrain Types	172
6.4.2	Vehicles	174
6.5	Other Applications	183
6.5.1	Portable Fuel Cells	184
6.5.2	Stationary Fuel Cells	185
6.5.3	Mobile Fuel Cells on Water	188
6.5.4	Mobile Fuel Cells on Air	189
7	Internal Combustion Engines	193
7.1	Relevant Properties of Hydrogen in Internal Combustion Engines	194
7.2	Classification and Outline Characteristics	197
7.3	Hydrogen Operation with External Mixture Formation	202
7.4	Internal Mixture Formation or Direct Hydrogen Injection	204
7.4.1	Combustion Behavior with Hydrogen Direct Injection	208
7.4.2	Charge Stratification	210
7.4.3	Combustion Control	213
7.4.4	Combustion with Auto-Ignition	215
7.5	Vehicles with Hydrogen Engines	216
7.6	Operation with Mixtures of Hydrogen and Methane	229
7.6.1	Effects on Combustion	235
7.6.2	Operating Strategies	240
7.6.3	Construction of a Prototype Vehicle	241
8	Further Applications	251
8.1	Haber-Bosch Process	251
8.2	Hydrofining	254
8.3	Hydrocracking	254
8.4	Fischer-Tropsch Process	255
8.5	Methanol Production	255
8.6	Semiconductor Industry	256
8.7	Analytical Chemistry	257
8.8	Food Chemistry	257
8.9	Water Treatment	258
8.10	Reduction and Treatment of Metals	258
8.11	Welding and Cutting	259
8.12	Energy Technology and Automotive Engineering	259

9	Materials, Law and Safety	263
9.1	Materials	263
9.2	Law and Safety	265
9.2.1	Regulations and Directives in the EU	266
9.2.2	Approval of Motor Vehicles in the EU	272
9.2.3	Standards and Technical Rules	275
9.2.4	Comparative Fire Test for Vehicle Tanks	277
9.2.5	Test Stands for Hydrogen Applications	278
9.2.6	Safety at HyCentA	284
	Literature	291
