Glossaries	xvii
1 Introduction	1
1.1 Motivation	1
1.2 State of the art and state of research	2
1.2.1 Load bearing behaviour of intact laminated safety glass	2
1.2.2 Load bearing behaviour of fractured laminated safety glass	7
1.3 Objectives	10
1.4 Outline	11
2 Theoretical background	13
2.1 Polymers	13
2.1.1 Molecular and intermolecular structures	13
2.1.2 Classification based on thermo-mechanical behaviour	18
2.1.3 Thermodynamics and kinetics	23
2.1.4 Thermal transitions and relaxations in polymers	28
2.1.5 Laminated glass interlayers	33
2.2 Crystallization	39
2.2.1 Crystallization from the melt	40
2.2.2 Degree of crystallization	43
2.2.3 Morphology	44
2.2.4 Crystallization kinetics	46
2.3 Viscoelasticity	61
2.3.1 Linear viscoelasticity - generalized Maxwell model	62
2.3.2 Linearity limits	66
2.3.3 Nonlinear viscoelasticity - Schapery model	69
2.4 Time-superposition principles	73
2.4.1 Time-temperature-superposition	73
2.4.2 Time-crystallinity-superposition	78
2.4.3 Time-stress / strain-superposition	81
3 General description of the experimental methods	85
3.1 Overview of tested materials	85

3.2	Differential Scanning Calorimetry	88
3.2.1	Functionality	88
3.2.2	Test set-up	89
3.2.3	Interpretation of the results	89
3.3	Dynamic-Mechanical-Thermal-Analysis	95
3.3.1	Different sweeps	96
3.3.2	Test set-up	98
3.3.3	Interpretation of the results	98
3.4	X-Ray Diffraction	106
3.4.1	Functionality	106
3.4.2	Test set-up	108
3.4.3	Interpretation of the results	109
3.5	Relaxation tests in uniaxial tensile mode	111
3.5.1	Functionality	111
3.5.2	Test set-up	111
3.5.3	Interpretation of the results	112
3.6	Overview of the performed tests	115
4	Investigation of the semicrystalline structure of EVA and ionoplastic interlayers	117
4.1	Crystalline regions and initial crystallinity	117
4.1.1	Differential Scanning Calorimetry	117
4.1.2	X-Ray Diffraction	122
4.2	Characteristic temperatures, melting and fusion enthalpies, and crystallinities	124
4.2.1	Differential Scanning Calorimetry	124
4.2.2	DMTA - temperature sweeps	131
4.3	Crystallization kinetics	139
4.4	Influence of physical aging	149
4.4.1	Differential Scanning Calorimetry and DMTA - temperature sweeps	149
4.4.2	DMTA - time sweeps	151
4.5	Summary and comparison with literature	151
5	Identification of time-superposition principles for EVA and ionoplastic interlayers	163
5.1	Temperature-frequency and frequency-temperature sweeps	163
5.1.1	Frequency- and temperature-dependent material behaviour	164
5.1.2	Comparison with temperature-sweep data	169
5.2	Creation of mastercurves	173
5.2.1	Mastercurves for SG	173
5.2.2	Mastercurves for cEVA	180
5.3	Decomposition of the horizontal shift factor	183

5.3.1	Time-superposition principles for SG	183
5.3.2	Time-superposition principles for cEVA	187
5.4	Determination of Prony series	189
5.5	Summary and comparison with literature	193
6	Determination of the linear viscoelastic behaviour and linearity limits for PVB	201
6.1	Linear viscoelastic material behaviour	201
6.1.1	Temperature-frequency sweeps	201
6.1.2	Glass transition temperatures	202
6.1.3	Mastercurves and Prony parameters	202
6.2	Linearity limits	207
6.3	Comparison of two different PVBs	211
6.4	Summary and comparison with literature	212
7	Characterization of the nonlinear viscoelastic behaviour of PVB	215
7.1	Uniaxial tensile relaxation tests	215
7.2	Comparison with Prony series	219
7.3	Introduction of the nonlinearity degree	221
7.4	Determination of Schapery model parameters	223
7.5	Summary and outlook	224
8	Application to engineering practice	231
8.1	Linear viscoelastic material parameters and glass design	231
8.1.1	Material type 1: amorphous polymers	234
8.1.2	Material type 2: semicrystalline polymers	237
8.1.3	Material type 3: chemically crosslinked polymers	239
8.1.4	Material type 4: unknown thermo-mechanical behaviour	240
8.2	Nonlinear viscoelastic material behaviour	240
8.3	Laminated glass design examples	241
8.3.1	Linear viscoelastic behaviour of semicrystalline interlayers	242
8.3.2	Linearity limit in intact laminated glass	252
9	Summary and outlook	257
	Bibliography	261
	Appendix	277
A	Additional data	281
B	List of publications, presentations and workshops	339
