|----------|---------------------------------------------------------------------------------------------------------------------|-----------|
| <b>1</b> | <b>Introduction: Climate Policy Goals of Sustainable Energy Supply . . . . .</b>                                    | <b>1</b>  |
| 1.1      | Why Do We Need a General Energy System (GES)? . . . . .                                                             | 1         |
| 1.1.1    | World Population, Energy Resources and the “Full World” . . . . .                                                   | 1         |
| 1.1.2    | Energy Consumption and CO <sub>2</sub> Emissions: From Kyoto<br>Protocol to Paris Agreement to Green Deal . . . . . | 6         |
| 1.1.3    | Sector Coupling: What Is It? . . . . .                                                                              | 14        |
| 1.2      | Paradigm Shift in Electrical Energy Supply Due to Regenerative<br>Generation . . . . .                              | 21        |
| 1.2.1    | Power, Energy and Efficiency . . . . .                                                                              | 21        |
| 1.2.2    | Potentials of Renewable Generation . . . . .                                                                        | 27        |
| 1.2.3    | Dunkelflaute and Other Special Features . . . . .                                                                   | 31        |
|          | References . . . . .                                                                                                | 41        |
| <b>2</b> | <b>Methodology and Model Design for Sector Coupling in the General<br/>Energy System (GES) . . . . .</b>            | <b>45</b> |
| 2.1      | Modelling of a GES . . . . .                                                                                        | 45        |
| 2.1.1    | Energy Hub Model . . . . .                                                                                          | 45        |
| 2.1.2    | Temporal Resolution of Energy Flows . . . . .                                                                       | 52        |
| 2.1.3    | Substitution of Energy Sources . . . . .                                                                            | 55        |
| 2.2      | Optimisation of a GES . . . . .                                                                                     | 57        |
| 2.2.1    | General Comments . . . . .                                                                                          | 57        |
| 2.2.2    | Approaches to System Optimisation . . . . .                                                                         | 60        |
| 2.2.3    | Dynamic Programming According to Bellmann . . . . .                                                                 | 68        |
|          | References . . . . .                                                                                                | 74        |
| <b>3</b> | <b>Energy Use Sectors and Their Energy Consumption . . . . .</b>                                                    | <b>77</b> |
| 3.1      | General Remarks . . . . .                                                                                           | 77        |
| 3.2      | Energy Supply (Gas, Electricity, Heat) and the Role of Hydrogen<br>(H <sub>2</sub> ) . . . . .                      | 82        |
| 3.3      | Industry: Net Zero Factory . . . . .                                                                                | 84        |
| 3.4      | Households . . . . .                                                                                                | 89        |
