Contents

1 An Introduction to the Econometrics of Program Evaluation 1
1.1 Introduction 1
1.2 Statistical Setup, Notation, and Assumptions 7
1.2.1 Identification Under Random Assignment 13
1.2.2 A Bayesian Interpretation of ATE Under Randomization 14
1.2.3 Consequences of Nonrandom Assignment and *Selection Bias* 16
1.3 Selection on Observables and Selection on Unobservables 18
1.3.1 Selection on Observables (or *Overt Bias*) and Conditional Independence Assumption 19
1.3.2 Selection on Unobservables (or *Hidden Bias*) 21
1.3.3 The Overlap Assumption 22
1.4 Characterizing Selection Bias 24
1.4.1 Decomposing Selection Bias 26
1.5 The Rationale for Choosing the Variables to Control for 28
1.6 Partial Identification of ATEs: The Bounding Approach 32
1.7 A Guiding Taxonomy of the Econometric Methods for Program Evaluation 36
1.8 Policy Framework and the Statistical Design for Counterfactual Evaluation 38
1.9 Available Econometric Software 41
1.10 A Brief Outline of the Book 43
References 44

2 Methods Based on Selection on Observables 47
2.1 Introduction 48
2.2 Regression-Adjustment 48
2.2.1 Regression-Adjustment as Unifying Approach Under Observable Selection 49

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

2.2.2 Linear Parametric Regression-Adjustment: The Control-Function Regression 54
2.2.3 Nonlinear Parametric Regression-Adjustment 59
2.2.4 Nonparametric and Semi-parametric Regression-Adjustment 61
2.3 Matching 65
2.3.1 Covariates and Propensity-Score Matching 66
2.3.2 Identification of ATEs Under Matching 68
2.3.3 Large Sample Properties of Matching Estimator(s) 70
2.3.4 Common Support 74
2.3.5 Exact Matching and the "Dimensionality Problem" 74
2.3.6 The Properties of the Propensity-Score 76
2.3.7 Quasi-exact Matching Using the Propensity-Score 77
2.3.8 Methods for Propensity-Score Matching 81
2.3.9 Inference for Matching Methods 86
2.3.10 Assessing the Reliability of CMI by Sensitivity Analysis 91
2.3.11 Assessing Overlap 94
2.3.12 Coarsened-Exact Matching 96
2.4 Reweighting 98
2.4.1 Reweighting and Weighted Least Squares 98
2.4.2 Reweighting on the Propensity-Score Inverse-Probability 102
2.4.3 Sample Estimation and Standard Errors for ATEs 107
2.5 Doubly-Robust Estimation 110
2.6 Implementation and Application of Regression-Adjustment 111
2.7 Implementation and Application of Matching 127
2.7.1 Covariates Matching 127
2.7.2 Propensity-Score Matching 130
2.7.3 An Example of Coarsened-Exact Matching Using `cem` 149
2.8 Implementation and Application of Reweighting 154
2.8.1 The Stata Routine `treatrew` 154
2.8.2 The Relation Between `treatrew` and Stata's `teffects ipw` 161
2.8.3 An Application of the Doubly-Robust Estimator 164

3 Methods Based on Selection on Unobservables 173
3.1 Introduction 173
3.2 Instrumental-Variables 175
3.2.1 IV Solution to Hidden Bias 176
3.2.2 IV Estimation of ATEs 178
3.2.3 IV with Observable and Unobservable Heterogeneities 184

3.2.4 Problems with IV Estimation 187
3.3 Selection-Model 192
3.3.1 Characterizing OLS Bias within a Selection-Model 193
3.3.2 A Technical Exposition of the Selection-Model 195
3.3.3 Selection-Model with a Binary Outcome 199
3.4 Difference-in-Differences 200
3.4.1 DID with Repeated Cross Sections 201
3.4.2 DID with Panel Data 206
3.4.3 DID with Matching 210
3.5 Implementation and Application of IV and Selection-Model 211
3.5.1 The Stata Command `ivtreatreg` 212
3.5.2 A Monte Carlo Experiment 215
3.5.3 An Application to Determine the Effect of Education on Fertility 218
3.5.4 Applying the Selection-Model Using `etregress` 223
3.6 Implementation and Application of DID 227
3.6.1 DID with Repeated Cross Sections 228
3.6.2 DID Application with Panel Data 234
References 240

4 Local Average Treatment Effect and Regression-Discontinuity-Design 243
4.1 Introduction 243
4.2 Local Average Treatment Effect 246
4.2.1 Randomization Under Imperfect Compliance 246
4.2.2 Wald Estimator and LATE 247
4.2.3 LATE Estimation 252
4.2.4 Estimating Average Response for Compliers 253
4.2.5 Characterizing Compliers 256
4.2.6 LATE with Multiple Instruments and Multiple Treatment 257
4.3 Regression-Discontinuity-Design 261
4.3.1 *Sharp* RDD 262
4.3.2 *Fuzzy* RDD 268
4.3.3 The Choice of the Bandwidth and Polynomial Order 272
4.3.4 Accounting for Additional Covariates 280
4.3.5 Testing RDD Reliability 280
4.3.6 A Protocol for Practical Implementation of RDD 283
4.4 Application and Implementation 284
4.4.1 An Application of LATE 285
4.4.2 An Application of RDD by Simulation 302
4.4.3 An Application of RDD to Real Data 333
References 338

5 Difference-in-Differences with Many Pre- and Post-Treatment Times 341
5.1 Introduction 341
5.2 The TVDIFF Model 342
5.2.1 Testing the "Common Trend" Assumption 345
5.2.2 An Application of the TVDIFF Model 347
5.3 The TFDIFF Model 351
5.3.1 Generalization to More Than Three Times 353
5.3.2 Testing the Parallel-Trend Assumption 354
5.3.3 An Application of the TFDIFF Model 354
5.4 Parallel-Trend Test in the Presence of Effect Anticipation 359
5.5 Conclusion 361
