Vorwort	vii
Kurzfassung	ix
Abstract	xi
Nomenclature	xx
1 Introduction	1
1.1 Motivation	1
1.2 State of the art	3
1.3 Scope of the work	13
2 Theoretical background	17
2.1 Macromechanics of laminae	17
2.2 Classical laminated plate theory (CLPT)	20
2.3 Structural stability	25
2.3.1 Equilibrium conditions	26
2.3.2 Linear buckling	27
2.3.3 Postbuckling	27
2.3.4 Approximate solutions based on the principle of the stationary value of the total elastic potential	29
3 Buckling of omega-stringer-stiffened panels under uniaxial compression	33
3.1 Idealised model	34
3.1.1 Boundary and continuity conditions	35
3.1.2 Stringer foot modelling	36
3.2 Lévy-type solution	41
3.2.1 Derivation of the transcendental equation	42
3.2.2 Robust and reliable evaluation	43
3.3 Closed-form solution	48
3.3.1 Buckling shape functions	48
3.3.2 Principle of the minimum of the total elastic potential	51
3.3.3 Closed-form analytical expression	54

3.4	Results and discussion	54
3.4.1	Finite element analysis	55
3.4.2	Verification	55
3.4.3	Parameter studies	56
3.5	Approximate modelling of the global-stability behaviour	66
4	Buckling of omega-stringer-stiffened panels under shear loading	71
4.1	Idealised model	73
4.1.1	Boundary and continuity conditions	74
4.1.2	Stringer foot modelling	75
4.1.3	Load factors	78
4.2	Closed-form solution	79
4.2.1	Buckling shape functions	79
4.2.2	Principle of the minimum of the total elastic potential	80
4.2.3	Closed-form analytical solution of the eigenvalue problem	82
4.3	Results and discussion	82
4.3.1	Finite element analysis	83
4.3.2	Verification	83
4.3.3	Parameter studies	84
5	Buckling of omega-stringer-stiffened panels under multiaxial loading conditions	97
5.1	Idealised model	99
5.1.1	Lagrange multiplier method	100
5.1.2	Stringer foot modelling	101
5.2	Semi-analytical solution	102
5.2.1	Trial functions	102
5.2.2	Ritz method	104
5.3	Results and discussion	110
5.3.1	Determination of number of evaluation points for the Lagrange multiplier method	111
5.3.2	Convergence behaviour of superposed trial functions	111
5.3.3	Comparative convergenve study of all investigated trial functions	114
5.3.4	Parameter studies	115
6	Local postbuckling of uniaxially compressed omega-stringer-stiffened panels	123
6.1	Idealised model	125
6.2	Closed-form analytical solution	128
6.2.1	Buckling shape functions	128
6.2.2	Airy stress function	132
6.2.3	Total elastic potential	138
6.2.4	Linear buckling solution	139
6.2.5	Nonlinear postbuckling solution	141

6.3	Results and discussion	143
6.3.1	Finite element model	144
6.3.2	Imperfections	145
6.3.3	Linear local buckling	146
6.3.4	Local postbuckling	150
7	Concluding remarks	163
7.1	Summary	163
7.2	Outlook	165
	Bibliography	167
	List of Figures	183
	List of Tables	189
A	Publications and supervised theses	191
B	Buckling coefficients	195
B.1	Entries of coefficient matrix of the transcendental problem	195
B.2	Elements of linear system of equations for the buckling shape functions	196
B.3	Coefficients of the approximate buckling shape functions for the shear loaded panel	198
C	Quantitative results	201
D	Additional definitions	203
D.1	Matrices of the eigenvalue problem	203
E	Postbuckling coefficients	205
E.1	Coefficients of the buckling shape functions	205
E.1.1	Model AB (web)	205
E.1.2	Model AB (floor)	206
E.1.3	Model ABC	208
E.2	Coefficient functions of the Ariy stress fuction	210
E.3	Coefficients of the total elastic potential	210
E.4	Results postbuckling analysis	216
