Acknowledgements	iii
Abstract	iv
Kurzfassung	vii
Extended Abstract	xvii
1 Introduction	1
2 State of the art	3
2.1 Ultra pure metals and their applications	3
2.1.1 Ultra-pure aluminum	5
2.1.2 Market size and major producers of high-purity aluminum	5
2.1.3 Uses and application	7
2.2 Refining methodologies for ultra-purity aluminum production	11
2.2.1 Three-layer electrolytic refining	12
2.2.2 Vacuum distillation	14
2.2.3 Fractional crystallization	16
2.2.4 Comparison between the described methodologies	20
2.3 Methods for aluminum fractional crystallization	22
2.3.1 Zone melting	22
2.3.2 Pechiney	28
2.3.3 Alcoa process	30
2.3.4 Cooling Body	32
2.4 The theoretical principles and influencing parameters of fractional crystallization	40
2.4.1 Distribution coefficient	40
2.4.2 Temperature gradient	41

2.4.3	Growth mechanisms	42
2.4.4	Effect of fluid flow in the fractional crystallization	43
2.4.5	Mass flux driven by convection	45
2.4.6	Solute segregation mechanisms	48
2.4.7	Fractional crystallization mechanism applied to a rotating cylinder in the melt	52
3	Research needs and hypothesis	55
4	Construction and simulation of the cooled finger process	57
4.1	Cooled finger prototype construction in an open resistance furnace	57
4.1.1	Collection of experimental data for the thermal model	59
4.1.2	Simulation of the cooled finger installed in an open resistance furnace	64
5	Process investigations on aluminum fractional crystallization	67
5.1	Theoretical investigation on the equilibrium distribution coefficient of impu- rities in aluminum	67
5.2	Experimental setup and analytical procedure used in these investigations . .	68
5.2.1	Equipment setup	69
5.2.2	Sampling and chemical analysis	71
5.2.3	SEM	73
5.2.4	Experimental determination of growth rate	74
5.3	Determination of the main process parameters in the cooled finger process .	75
5.4	Influence of process parameters on the growth rate	76
5.4.1	Influence of heat input	76
5.4.2	Influence of rotation and cooling gas flow rate	79
5.4.3	Summary of the investigation on the growth rate	81
5.5	Influence of process parameters on purification rate	82
5.5.1	Influence of impurity type and concentration	82
5.5.2	Influence of growth rate and rotation	91
5.5.3	Summary of the investigation on purification rate	93
5.6	The role of convection on the purification rate	95
5.6.1	Experimental design	95
5.6.2	Analytical approach	96
5.6.3	Results	97
5.6.4	Summary of the investigation on convection	111

6	Germanium refining via a cooled finger installed in a vacuum resistance furnace	115
6.1	High purity germanium and its application	115
6.1.1	Purification of germanium by fractional crystallization	116
6.1.2	Cooled finger installed in a vacuum resistance furnace	117
6.2	Modeling via CrysVUn software	118
6.3	Experimental setup and process parameters investigated	119
6.3.1	Experimental investigation for the purification of germanium	122
6.4	Conclusions	125
7	Summary and outlook	127
