

Table of Contents

1 Introduction	1
2 Constructing simple tensegrity models	5
2.1 Tensegrity tripod	5
2.1.1 Materials	6
2.1.2 Construction	7
2.2 Three-level 'Needle Tower'	22
2.2.1 Materials	22
2.2.2 Construction variation 1	23
2.2.3 Construction variation 2	30
2.3 Six-strut spherical tensegrity structure ('tensegrity icosahedron')	34
2.3.1 Materials	34
2.3.2 Construction	35
3 Reflections upon tensegrity	43
3.1 Forces: the interplay of tension and compression	43
3.1.1 Traditional versus tensegral	43
3.1.2 Tensegrity maximises the advantages of tension and minimises the drawbacks of compression	46
3.1.3 Tensegrity structures are elastic and highly responsive	47
3.1.4 Tensegrity structures are synergic	47
3.1.5 The spiralling and volume-maintaining response of tensegrity structures to loads	49
3.1.6 Glossary	52
3.2 Forms: a geometry for thinking and feeling	57
3.2.1 Space in art and architecture	57
Shaping the space with innovative organic geometry	57
A short stroll through art history	59
3.2.2 Energetic geometry	60
Polyhedral shapes materialise energy states of space	60
'Jitterbug' and the icosahedron	62
The special status of the icosahedron among the other polyhedra	66
3.2.3 A critique of 'cubic thinking'	68
What is a cube really?	68
The cube cannot be chosen as the primary reference for the description of space	72
Some more thoughts on the cubic perspective	73
3.2.4 Part-whole relationship: inescapable complexity	74
Complexity is given à priori, irreducible and independent of size	74

3.2.5 Tensegrity: the epitome of <i>Fuller's</i> concept	77
The 'tensegrity icosahedron'	77
Two familiar tensegrity structures	79
Tensegrity: a playful approach to complexity	80
<i>Fuller</i> and architecture	83
3.3 The body: a biotensegral heterarchy	85
3.3.1 Tensegrity at the organism level.	85
Bones are islands of compression.	85
The significance of the compressional discontinuity	87
3.3.2 Tensegrity from the subcellular to the tissue level.	87
The place of water in biotensegral structures.	89
Biotensegrity and the organs.	90
3.3.3 A unifying approach to anatomy and biomechanics	90
Steps towards unity.	91
The 'mesokinetic organ'	92
Putting things together: which mechanical model best fits body function and our perception of it?	94
4 Inspirations	95
4.1 Biotensegral-body awareness	95
4.2 Creative thoughts by contributors sharing the spirit of biotensegrity	104
4.2.1 Dance and biotensegrity (Liane Simmel)	104
4.2.2 Osteo Awareness and biotensegrity (Michèle Tarento)	105
4.2.3 Biotensegrity and manual fascia therapy: the importance of the bones' structure (Nadine Quéré)	107
4.2.4 Reflections of a cardiologist inspired by the concept of biotensegrity (Bernard Payrau)	108
4.2.5 Exploring the biotensegral response potential with special needs children and adults – advanced biomechanical rehabilitation (Diane Drake Vincentz)	112
4.2.6 Towards a tensegral grammar (Marc Nürnberger)	117
4.3 Further realisations and projects involving tensegrity	120
From bird flocks formation	120
... to virus' self-assembly and motion	120
... to innovative human-designed structures	121
5 Concluding words	123
6 Appendix	124
Bibliography	124
Index	130
