

Chihiro Hamaguchi

Basic Semiconductor Physics

With 168 Figures and 25 Tables

Springer

Contents

1. Energy Band Structures of Semiconductors	1
1.1 Free-Electron Model	1
1.2 Bloch Theorem	3
1.3 Nearly Free Electron Approximation	4
1.4 Reduced Zone Scheme	8
1.5 Free-Electron Bands (Empty-Lattice Bands)	9
1.6 Pseudopotential Method	12
1.7 $\mathbf{k} \cdot \mathbf{p}$ Perturbation	17
2. Cyclotron Resonance and Energy Band Structures	25
2.1 Cyclotron Resonance	25
2.2 Analysis of Valence Bands	33
2.3 Spin-Orbit Interaction	37
2.4 Non-parabolicity of the Conduction Band	46
2.5 Electron Motion in a Magnetic Field and Landau Levels	48
2.5.1 Landau Levels	48
2.5.2 Landau Levels of a Non-parabolic Band	55
2.5.3 Landau Levels of the Valence Bands	59
3. Wannier Function and Effective Mass Approximation	65
3.1 Wannier Function	65
3.2 Effective-mass Approximation	67
3.3 Shallow Impurity Levels	71
3.4 Impurity Levels in Ge and Si	74
3.4.1 Valley-Orbit Interaction	77
3.4.2 Central Cell Correction	79
4. Optical Properties 1	81
4.1 Reflection and Absorption	81
4.2 Direct Transition and Absorption Coefficient	85
4.3 Joint Density of States	87
4.4 Indirect Transition	92
4.5 Exciton	97
4.5.1 Direct Exciton	97

4.5.2	Indirect Exciton	106
4.6	Dielectric Function	108
4.6.1	E_0 , $E_0 + \Delta_0$ Edge	111
4.6.2	E_1 and $E_1 + \Delta_1$ Edge	113
4.6.3	E_2 Edge	113
4.6.4	Exciton	114
4.7	Piezobirefringence	116
4.7.1	Phenomenological Theory of Piezobirefringence	116
4.7.2	Deformation Potential Theory	117
4.7.3	Stress-Induced Change in Energy Band Structure	120
5.	Optical Properties 2	125
5.1	Modulation Spectroscopy	125
5.1.1	Electro-optic Effect	125
5.1.2	Franz-Keldysh Effect	126
5.1.3	Modulation Spectroscopy	130
5.1.4	Theory of Electoreflectance and Third-Derivative Form of Aspnes	134
5.2	Raman Scattering	139
5.2.1	Selection Rule of Raman Scattering	144
5.2.2	Quantum Mechanical Theory of Raman Scattering ...	149
5.2.3	Resonant Raman Scattering	154
5.3	Brillouin Scattering	158
5.3.1	Scattering Angle	159
5.3.2	Brillouin Scattering Experiments	163
5.3.3	Resonant Brillouin Scattering	167
5.4	Polaritons	170
5.4.1	Phonon Polaritons	170
5.4.2	Exciton Polaritons	174
5.5	Free-Carrier Absorption and Plasmon	177
6.	Electron-Phonon Interaction and Electron Transport	183
6.1	Lattice Vibrations	183
6.1.1	Acoustic Mode and Optical Mode	183
6.1.2	Harmonic Approximation	187
6.2	Boltzmann Transport Equation	196
6.2.1	Collision Term and Relaxation Time	198
6.2.2	Mobility and Electrical Conductivity	201
6.3	Scattering Probability and Transition Matrix Element	205
6.3.1	Transition Matrix Element	205
6.3.2	Deformation Potential Scattering (Acoustic Phonon Scattering)	208
6.3.3	Ionized Impurity Scattering	210
6.3.4	Piezoelectric Potential Scattering	214
6.3.5	Non-polar Optical Phonon Scattering	216

6.3.6	Polar Optical Phonon Scattering	217
6.3.7	Inter-Valley Phonon Scattering.....	222
6.3.8	Deformation Potential in Degenerate Bands.....	223
6.3.9	Theoretical Calculation of Deformation Potentials	225
6.3.10	Electron-Electron Interaction and Plasmon Scattering	230
6.3.11	Alloy Scattering.....	237
6.4	Scattering Rate and Relaxation Time	238
6.4.1	Acoustic Phonon Scattering	242
6.4.2	Non-polar Optical Phonon Scattering	245
6.4.3	Polar Optical Phonon Scattering	246
6.4.4	Piezoelectric Potential Scattering	248
6.4.5	Inter-Valley Phonon Scattering.....	248
6.4.6	Ionized Impurity Scattering.....	250
6.4.7	Neutral Impurity Scattering	251
6.4.8	Plasmon Scattering	252
6.4.9	Alloy Scattering.....	252
6.5	Mobility.....	252
6.5.1	Acoustic Phonon Scattering	253
6.5.2	Non-Polar Optical Phonon Scattering	254
6.5.3	Polar Optical Phonon Scattering	256
6.5.4	Piezoelectric Potential Scattering.....	256
6.5.5	Inter-Valley Phonon Scattering.....	257
6.5.6	Ionized Impurity Scattering.....	258
6.5.7	Neutral Impurity Scattering	259
6.5.8	Alloy Scattering.....	259
7.	Magnetotransport Phenomena.....	261
7.1	Phenomenological Theory of the Hall Effect.....	261
7.2	Magnetoresistance Effects	267
7.2.1	Theory of Magnetoresistance.....	267
7.2.2	General Solutions for a Weak Magnetic Field	268
7.2.3	Case of Scalar Effective Mass	269
7.2.4	Magnetoresistance	271
7.3	Shubnikov-de Haas Effect	275
7.3.1	Theory of Shubnikov-de Haas Effect	275
7.3.2	Longitudinal Magnetoresistance Configuration	279
7.3.3	Transverse Magnetoresistance Configuration	281
7.4	Magnetophonon Resonance	285
7.4.1	Experiments and Theory of Magnetophonon Resonance	285
7.4.2	Various Types of Magnetophonon Resonance.....	292
7.4.3	Magnetophonon Resonance under High Electric and High Magnetic Fields	297
7.4.4	Polaron Effect	302

8. Quantum Structures	307
8.1 Historical Background	307
8.2 Two-Dimensional Electron Gas Systems	308
8.2.1 Two-Dimensional Electron Gas in MOS Inversion Layer	308
8.2.2 Quantum Wells and HEMT	317
8.3 Transport Phenomena in a Two-Dimensional Electron Gas	324
8.3.1 Fundamental Equations	324
8.3.2 Scattering Rate	327
8.3.3 Mobility of a Two-Dimensional Electron Gas	342
8.4 Superlattices	347
8.4.1 Kronig-Penney Model	347
8.4.2 Effect of Brillouin Zone Folding	349
8.4.3 Tight Binding Approximation	351
8.4.4 sp^3s^* Tight Binding Approximation	354
8.4.5 Energy Band Calculations for Superlattices	355
8.4.6 Second Nearest-Neighbor sp^3 Tight Binding Approximation	361
8.5 Mesoscopic Phenomena	368
8.5.1 Mesoscopic Region	368
8.5.2 Definition of Mesoscopic Region	370
8.5.3 Landauer Formula and Büttiker-Landauer Formula	372
8.6 Research in the Mesoscopic Region	378
8.7 Aharonov-Bohm Effect (AB Effect)	378
8.8 Ballistic Electron Transport	379
8.9 Quantum Hall Effect	381
8.10 Coulomb Blockade and Single Electron Transistor	393
Appendices	401
A Delta Function and Fourier Transform	401
A.1 Dirac Delta Function	401
A.2 Cyclic Boundary Condition and Delta Function	403
A.3 Fourier Transform	405
B Uniaxial Stress and Strain Components in Cubic Crystals	407
C Boson Operators	410
D Random Phase Approximation and Rindhard Dielectric Function	414
E Density Matrix	416
References	419
Index	429
