

1	Cell Architecture	1
1.1	Cells and Their Biochemical Composition	2
1.2	The Cell's Skeleton	4
1.2.1	Actin Filaments Form Flexible Meshes	5
1.2.2	Intermediate Filaments for Robustness	5
1.2.3	Microtubules as Tracks for Intracellular Transportation	6
1.2.4	Motor Proteins to Position Cellular Cargo	7
1.3	Organelles of a Cell	7
1.4	Cell-To-Cell Contacts	8
1.4.1	Occluding Junctions as Diffusion Barriers	9
1.4.2	Anchoring Junctions for Adhesion	9
1.4.3	Gap Junctions for Communication	9
2	DNA & RNA & Associated Proteins	11
2.1	Structural Elements	12
2.2	Organization of Genetic Information	14
2.2.1	Gene Elements, Histones and Chromatin	14
2.2.2	Chromosomes, Genes and Heredity	15
2.3	The Genetic Code	17
2.4	DNA Replication	18
2.4.1	Molecular Components Involved in DNA Replication	19
2.4.2	DNA Recombination to Secure Integrity and Diversity	21
3	Transcription and Translation	25
3.1	The Genome is Read and Transcribed	26
3.1.1	Start the Transcription	27
3.1.2	Quality Control During Transcription	28
3.2	Processing of Transcripts	28
3.2.1	Stop the Transcription	28
3.2.2	Splice the Transcript	29
3.3	Transcripts are Translated into Polypeptides	30
3.3.1	Initiation of Translation	31
3.3.2	Ribosomal Structure and Function	32
3.3.3	Protein Folding	33

3.4	Measuring Cellular Content	34
3.4.1	DNA Sequence Variants	34
3.4.2	Omics Data	36
4	Regulation of Gene Expression	39
4.1	Transcriptional Regulation	40
4.2	Regulatory RNAs	41
4.3	Protein Control	42
4.3.1	Post-Translational Modifications	42
4.3.2	Protein Decay	44
4.4	Epigenetics	45
4.4.1	Mechanisms of Epigenetic Regulation	45
4.4.2	Causes and Consequences of Epigenetic Regulation	48
5	Membranes and Intracellular Transport	49
5.1	Composition and Assembly of Cellular Membranes	50
5.2	Targeted Protein Transport	51
5.2.1	Protein Transport through Nuclear Pores	52
5.2.2	Unfolding of Proteins for Mitochondria and Chloroplasts	53
5.2.3	Co-Translational Import into the Endoplasmatic Reticulum	54
5.3	Vesicular Transport	55
5.3.1	Glycosylation of Proteins and Quality Control	55
5.3.2	Exo- and Endocytosis	57
6	Signalling	61
6.1	Molecular Switches between On- and Off-State	62
6.2	Molecules and Physicochemical Properties as Input from the Sender	64
6.3	Receiving Cues via Cellular Receptors	64
6.3.1	Ion Channels Maintain the Flow of Ions and Thus Information	64
6.3.2	G-Protein Coupled Receptors Enable Switching Mechanisms	65
6.3.3	Enzyme-Coupled Receptors Regulate Complex Processes	65
6.4	Signal Conversion in Protein Networks	66
6.4.1	Second Messengers to Spread Information Rapidly	66
6.4.2	Kinase Cascades for Signal Relay	67
6.4.3	Transcription Factors Control Gene Expression	67
6.5	Characteristic Motifs and Behaviours	68
6.5.1	Signal-Response Curves	69
6.5.2	Time-Course Curves	70
6.5.3	Complex Interactions	72

6.6	Emergent Properties as Output	73
6.7	Signal Input, Processing and Output Happens on Various Levels	73
7	Cell Cycle	75
7.1	Cell-Cycle Model Systems	76
7.1.1	Cellular Contexts to Study the Cell Cycle	77
7.1.2	Discovery of Core Cell-Cycle Components	78
7.2	Checkpoints Regulating the Cell Cycle	79
7.2.1	The Restriction Point Mediated by Rb and E2F	79
7.2.2	The DNA-Damage Response	81
7.2.3	Hyperproliferative Stress	82
7.3	Conceptual Views on Cell-Cycle Phenomena	83
7.3.1	Cell Growth as Biomass Acquisition	83
7.3.2	Cell Division as Biomass Distribution	84
7.3.3	Find a Balance: Divide et cresce!	85
7.3.4	A Molecular Cell-Cycle Set-up for Oscillations	86
7.3.5	The Cell-Cycle Programme	86
8	Immunology	89
8.1	Components of the Immune System	90
8.1.1	Sites and Non-Cellular Substances of Immune Reactions	90
8.1.2	The Hematopoiesis Tree and Its Branches	91
8.2	Innate Immunity as First Line of Host Defence	94
8.2.1	Inflammation and the Complement System	94
8.2.2	Pattern Recognition: Know Your Enemy	95
8.3	Adaptive Immunity as Ability to Strike Back	96
8.3.1	Clonal Selection of Special Forces	96
8.3.2	Antibodies	97
8.3.3	Regulation of T Cells for Killing, Help, Memory and Balance	98
8.3.4	(Auto-)immune Disease	100
9	Cancer	103
9.1	Different Types of Cancer	104
9.1.1	Phenotypic Tumour Development	105
9.1.2	Causes of Cancer Development	106
9.2	<i>Pro et Contra</i> Cancer	107
9.2.1	Immortality and Programmed Cell Death	108
9.2.2	Molecular Complexity Underlying Cancer	109
9.2.3	Hallmarks of Cancer	110
9.3	Combat Cancer	113
9.3.1	Current Therapeutic Approaches	113
9.3.2	the Future of Personalized Medicine	113

Glossary	115
