## Preface for Volume 1 — V

### Chapter 1

#### Historical introduction — 1

- 1.1 Introduction — 1
- 1.2 Sound waves and some basic elements of acoustics — 2
- 1.3 A note on the physiology of hearing — 5
- 1.4 Cavitation – some background information — 7
- 1.5 Sonochemistry – the first uses of the term — 10
- 1.6 Sonochemistry: some personal reflections from Tim Mason — 13
  - 1.6.1 The beginnings of sonochemistry in Coventry — 16
  - 1.6.2 The first international meeting on sonochemistry — 21
  - 1.6.3 Textbooks produced by the Coventry Sonochemistry Group — 22
- 1.7 The development of sonochemistry — 24
  - 1.7.1 The European Society of Sonochemistry — 24
  - 1.7.2 Meetings and conferences of importance to the development of sonochemistry — 28
  - 1.7.3 International conference series involving sonochemistry — 36
- 1.8 European Union research programmes involving sonochemistry — 40
  - 1.8.1 European research programmes — 40
  - 1.8.2 European research projects to support Eastern Europe and the Soviet Union (1997–2001) — 46
  - 1.8.3 European Framework Programmes (2005–2013) — 47
- 1.9 Origins of the journal *Ultrasonics Sonochemistry* — 48
- 1.10 The Sonochemistry Centre at Coventry University — 49
  - 1.10.1 Sonochemistry in Coventry University after closure of the Sonochemistry Centre in 2015 — 51
- 1.11 Sonochemistry some personal reflections from Mircea Vinatoru — 52
  - 1.11.1 EU COPERNICUS and COST D10 programmes involving ultrasonic extraction from renewable natural resources — 55
  - 1.11.2 The “ordering effects” mechanism in sonochemistry — 58
  - 1.11.3 Work in Japan — 61
  - 1.11.4 Work in Canada (2001 and 2005) — 62
  - 1.11.5 Work in Texas (2007–2009) — 64
  - 1.11.6 Work in the Coventry Sonochemistry Group (2009–2015) — 65
  - 1.11.7 Return to Romania and ULTRAMINT — 67
- 1.12 Some comments on the links between sonochemistry and nuclear fusion — 68

1.12.1	Energy derived from nuclear fusion —	68
1.12.2	Cold fusion —	69
1.12.3	The film <i>Chain Reaction</i> —	69
1.12.4	Nuclear fusion in a cavitation bubble —	70
1.13	Concluding remarks —	71
	References —	72

## Chapter 2

### Fundamental aspects of sonochemistry — 79

2.1	Introduction to acoustic waves —	79
2.2	Acoustic waves and their propagation —	79
2.3	Ultrasound parameters: velocity, wavelength and frequency —	85
2.4	Sound attenuation —	86
2.5	Ultrasound power measurements and dosimetry —	87
2.6	The importance of power distribution and power density —	89
2.7	Sonochemistry reaction conditions and scale-up —	91
2.7.1	Scaling up; a note of caution about computer optimization —	92
2.7.2	Continuous and loop reactors —	93
2.8	Bubble collapse —	96
2.8.1	Symmetric collapse of cavitation bubbles —	98
2.8.2	Asymmetric collapse of cavitation bubbles —	99
2.8.3	Some comments about sonoluminescence —	100
2.9	Concluding remarks —	101
	References —	101

## Chapter 3

### Ultrasonically assisted extraction (UAE) — 105

3.1	Introduction to the extraction of natural medicinal compounds —	105
3.2	A brief history of medicinal plants —	109
3.2.1	Notes on the Romanian Pharmacopoeia —	111
3.2.2	Some information about allelopathy —	112
3.3	Classical extraction procedures for vegetal materials —	113
3.3.1	Distillation —	113
3.3.2	Solvent extraction —	114
3.4	Non-conventional extraction procedures (excluding UAE) —	116
3.4.1	Supercritical fluid extraction (SFE) —	116
3.4.2	Microwave-assisted extraction (MAE) —	117
3.4.3	Pulsed-electric field extraction (PEF) —	117
3.4.4	Enzyme-assisted extraction (EAE) —	118
3.4.5	Pressurized liquid extraction (PLE) —	118
3.5	The origins of ultrasonically assisted extraction (UAE) —	118

3.6	The development of UAE from the 1990s in Coventry and Bucharest —	120
3.6.1	UAE research projects supported by the European Union —	121
3.6.2	Programmes supported by the UK —	138
3.6.3	UAE applied to the valorization (increasing the value) of edible oils —	147
3.6.4	UAE and links with non-classical extraction procedures —	147
3.7	Some important parameters to consider in UAE —	152
3.7.1	Swelling index (SI) —	152
3.7.2	Extractive value – EV —	153
3.8	The way in which UAE works with associated mechanisms —	155
3.9	Practical aspects of UAE —	159
3.9.1	Some guidance for good practice in UAE —	160
3.9.2	Laboratory equipment for UAE —	161
3.9.3	Larger scale systems for UAE —	164
3.10	Concluding remarks —	168
	References —	169

## Chapter 4

### Environmental protection — 177

4.1	Historical introduction —	177
4.1.1	Biological effects of ultrasound —	177
4.1.2	Chemical effects of ultrasound —	181
4.2	Studies in Coventry —	185
4.2.1	Water disinfection with chlorine —	188
4.2.2	Cryptosporidium —	189
4.2.3	Report from the Foundation for Water Research —	190
4.3	Environmental protection – microbiology —	191
4.3.1	INCO-COPERNICUS project 1999–2001 —	191
4.3.2	Flow systems for the treatment of suspensions of bacteria —	194
4.3.3	Ultrasound treatment of bacteria in conjunction with other methods —	198
4.3.4	Ultrasound for the control of algae —	204
4.4	Environmental protection – chemical —	217
4.4.1	Sonoelectrochemical methods —	217
4.4.2	Removal of volatile and non-volatile pollutants —	223
4.4.3	Removal of endocrine disruptor chemicals (EDCS) —	225
4.4.4	Removal of dyes —	226
4.4.5	Decontamination of soil —	231
4.5	Large-scale low-frequency sound —	236
4.5.1	Low-frequency sound plus ozone for dye destruction —	238
4.5.2	Low-frequency sound for soil remediation —	240

4.5.3	Hydration (slaking) of ash waste from fluidized bed combustors (FBC) — <b>241</b>
4.6	Environmental involvement of Mircea (in Japan and Romania) — <b>243</b>
4.6.1	Dioxin degradation — <b>243</b>
4.6.2	Chlorobenzene decomposition using Fenton-type aqueous systems — <b>244</b>
4.6.3	Removal of heavy metals with alginate beads — <b>245</b>
4.7	Concluding remarks — <b>247</b>
	References — <b>247</b>

<b>Index — 255</b>
