Preface — V

1 Introduction — 1

2 Structure and Properties of Water — 8

- 2.1 Structure of Water — 8
- 2.2 Properties of Water — 11
 - 2.2.1 Density — 11
 - 2.2.2 Phase Diagram – Melting Point and Boiling Point — 14
 - 2.2.3 Energetic Quantities — 17
 - 2.2.4 Viscosity — 19
 - 2.2.5 Surface Tension — 20
 - 2.2.6 Relative Permittivity — 25
- 2.3 Water as a Solvent — 26
- 2.4 Problems — 29

3 Concentrations and Activities — 31

- 3.1 Introduction — 31
- 3.2 Concentrations — 31
- 3.3 Conversion of Concentration Units — 36
 - 3.3.1 Introduction and Basic Equations — 36
 - 3.3.2 Conversion of Mass Concentration — 36
 - 3.3.3 Conversion of Molar Concentration — 37
 - 3.3.4 Conversion of Molality — 38
 - 3.3.5 Conversion of Mole Fraction — 39
 - 3.3.6 Conversion of Mass Fraction — 39
- 3.4 Element-Related Concentrations — 40
- 3.5 Gas-Phase Concentrations — 42
- 3.6 Electroneutrality Condition and Ion Balance — 43
- 3.7 Hardness as a Specific Concentration Measure — 44
- 3.8 Activities and Activity Coefficients — 49
- 3.9 Problems — 55

4 Colligative Properties — 56

- 4.1 Introduction — 56
- 4.2 Vapor Pressure Lowering — 56
- 4.3 Boiling Point Elevation and Freezing Point Depression — 58
- 4.4 Osmotic Pressure — 60
- 4.5 Colligative Properties of Real Solutions — 62
- 4.6 Problems — 63

5 The Chemical Equilibrium: Some General Aspects — 64

- 5.1 Introduction — 64
- 5.2 Law of Mass Action and Equilibrium Constants — 64
- 5.3 Conventions on the Use of Concentration Measures in the Law of Mass Action — 66
- 5.4 Gibbs Energy of Reaction, Equilibrium Constants, and Reaction Quotients — 67
- 5.5 Estimation of Equilibrium Constants — 68
- 5.6 Temperature Dependence of Equilibrium Constants — 69
- 5.7 Equilibrium Constants of Reverse and Overall Reactions — 71
- 5.8 Problems — 72

6 Gas–Water Partitioning — 74

- 6.1 Introduction — 74
- 6.2 Henry's Law — 75
- 6.3 Alternative Formulations of Henry's Law — 77
- 6.4 Estimation of Henry's Law Constants for Volatile Substances — 79
- 6.5 Open and Closed Systems — 79
- 6.6 Solubilities of Atmospheric Gases in Water — 81
- 6.7 Calculation of Equilibrium Concentrations in Closed Systems — 82
- 6.8 Coupling of Gas–Water Partitioning and Chemical Reaction — 84
- 6.9 Problems — 86

7 Acid/Base Equilibria — 88

- 7.1 Introduction — 88
- 7.2 Brønsted's Acid/Base Theory — 88
- 7.3 Water as an Acid/Base System — 91
- 7.4 Protolysis of Acids and Bases — 93
- 7.5 pH of Aqueous Solutions of Acids, Bases, and Salts — 97
 - 7.5.1 pH of Acid Solutions — 97
 - 7.5.2 pH of Base Solutions — 100
 - 7.5.3 pH of Salt Solutions — 100
 - 7.5.4 Buffer Systems — 105
- 7.6 Degree of Protolysis and Acid/Base Speciation — 107
 - 7.6.1 Monoprotic Acids — 107
 - 7.6.2 Polyprotic Acids — 110
- 7.7 Carbonic Acid — 112
 - 7.7.1 Relevance — 112
 - 7.7.2 Speciation of Carbonic Acid — 112
 - 7.7.3 Determination of the Carbonic Acid Species by Acid/Base Titrations — 114

7.7.4	General Definitions of the Alkalinities and Acidities on the Basis of Proton Balances — 121
7.7.5	The Conservative Character of Alkalinity — 122
7.7.6	Determination of Dissolved Inorganic Carbon — 123
7.7.7	pH of Pristine Rain Water — 125
7.7.8	Photosynthesis and Carbonic Acid System — 126
7.8	Problems — 128
8	Precipitation/Dissolution Equilibria — 130
8.1	Introduction — 130
8.2	The Solubility Product — 130
8.3	Solubility Product and Solubility — 132
8.3.1	Relationship Between Solubility Product and Solubility — 132
8.3.2	Influence of the Ionic Strength on the Solubility — 134
8.3.3	Influence of Side Reactions on the Solubility — 136
8.4	Assessment of the Saturation State of a Solution — 138
8.5	Problems — 139
9	Calco-Carbonic Equilibrium — 141
9.1	Introduction — 141
9.2	Basic Equations — 142
9.3	Graphical Representation of the Calco-Carbonic Equilibrium: Tillmans Curve — 144
9.4	Assessment of the Calcite Saturation State — 148
9.5	Outlook: Assessment of the Calcite Saturation State Under Consideration of Complex Formation — 153
9.6	Special Case: Fixed CO ₂ Partial Pressure — 154
9.7	Problems — 158
10	Redox Equilibria — 159
10.1	Introduction — 159
10.2	Estimation of Oxidation Numbers (Oxidation States) — 159
10.3	Redox Equilibria: Definitions and Basic Concepts — 162
10.4	Half-Reactions — 163
10.4.1	Writing Equations for Redox Half-Reactions — 163
10.4.2	Law of Mass Action and Redox Intensity — 165
10.4.3	Redox Intensity Versus Redox Potential — 171
10.4.4	Special Case: Redox Reactions with Dissolved Gases — 172
10.4.5	Crossover Points Between Predominance Areas of Reduced and Oxidized Species — 174
10.4.6	Speciation as a Function of p_e — 176
10.4.7	Water as a Redox System — 178

10.5	Construction of pe–pH Diagrams —	180
10.5.1	Introduction —	180
10.5.2	Boundary Lines for Pure Acid/Base Systems —	181
10.5.3	Boundary Lines for Complex Acid/Base Systems —	181
10.5.4	Boundary Lines for Pure Redox Systems with Oxidant and Reductant in Dissolved Form —	182
10.5.5	Boundary Lines for pH-Dependent Redox Systems with Oxidant and Reductant in Dissolved Form —	183
10.5.6	Boundary Lines for pH-Dependent Redox Systems Where Only One Partner Occurs in Dissolved Form —	183
10.5.7	Example: The pe–pH Diagram of Iron —	184
10.5.8	Example: The pe–pH Diagram of Sulfur —	191
10.6	Complete Redox Reactions —	193
10.6.1	Basic Relationships —	193
10.6.2	Redox Reactions Within the Global Carbon Cycle —	200
10.6.3	Further Oxidation Reactions Mediated by Microorganisms —	203
10.7	Problems —	204
11	Complex Formation —	206
11.1	Introduction —	206
11.2	Ligands in Aquatic Systems —	208
11.3	Equilibrium Relationships and Constants —	210
11.4	Strength of Complexation: Monodentate Versus Polydentate Ligands —	212
11.5	Complex Formation and Solubility —	214
11.6	Hydrolysis of Hydrated Metal Ions —	215
11.7	Speciation of Metal Ions —	217
11.7.1	Introduction —	217
11.7.2	Speciation of Dissolved Metal Ions at Constant Total Metal Concentration —	218
11.7.3	Speciation in the Presence of a Solid That Determines the Liquid-Phase Concentrations —	223
11.8	Problems —	226
12	Sorption —	229
12.1	Introduction —	229
12.2	Geosorbents —	230
12.3	Sorption Isotherms —	231
12.3.1	General Considerations —	231
12.3.2	Isotherm Equations —	232
12.3.3	Distribution Between Liquid and Solid Phase —	236
12.4	Sorption Onto Charged Surfaces —	237

12.4.1	Introduction —	237
12.4.2	Mathematical Description of the Surface Protonation/ Deprotonation —	239
12.4.3	Modeling of Ion Sorption —	245
12.5	Sorption of Organic Species Onto Organic Material —	248
12.6	Sorption-Influenced Subsurface Transport of Dissolved Substances —	253
12.7	Problems —	255

13 Solutions to the Problems — 256

A Appendix — 311

A.1	Some Important Constants —	311
A.2	Some Important Logarithm Rules —	311
A.3	List of Important Equations —	312

Nomenclature — 327

Bibliography — 333

Index — 335
