Preface of the 2nd edition — V

Preface — VII

1 Time series analysis — 1

- 1.1 Stationary time series — 1
- 1.2 Prediction of time series — 6
- 1.3 Spectral analysis — 13
- 1.4 Autoregressive moving average models — 19
- 1.5 Prediction and modeling of ARMA processes — 28
- 1.6 Multivariate ARMA processes — 37
- 1.7 State-space models — 43
- Further reading — 47

2 Chaos and dynamical systems — 49

- 2.1 Dynamical systems — 49
- 2.2 Henon and logistic maps — 50
- 2.3 Lyapunov exponents — 54
- 2.4 Fractal dimension — 56
- 2.5 Prediction — 60
- 2.6 Delay embedding vectors — 61
- 2.7 Singular spectrum analysis — 62
- 2.8 Recurrence networks — 63
- Further reading — 66

3 Approximation — 68

- 3.1 Deterministic and stochastic approximations — 68
- 3.2 Dimensionality reduction — 77
- 3.3 Polynomial approximation — 82
- 3.4 Spline and rational approximations — 88
- 3.5 Wavelet approximation — 93
- 3.6 Greedy algorithms — 105
- Further reading — 108

4 Interpolation — 110

- 4.1 Curve fitting — 110
- 4.2 Lagrange interpolation — 114
- 4.3 Hermite interpolation — 119
- 4.4 Spline interpolation — 121
- 4.5 Trigonometric interpolation — 125

- 4.6 Planar interpolation — 127
- Further reading — 129

5 Patterns — 132

- 5.1 Linear and nonlinear regressions — 132
- 5.2 High-dimensional regression — 136
- 5.3 Tree-ring-based climate reconstructions — 139
- 5.4 Covariance analysis — 141
- 5.5 Discriminant analysis — 143
- 5.6 Cluster analysis — 148
- 5.7 Principal component analysis — 150
- 5.8 Canonical correlation analysis — 153
- 5.9 Factor analysis — 154
- Further reading — 158

6 Estimates — 160

- 6.1 Numerical integration — 160
- 6.2 Numerical differentiation — 164
- 6.3 Iterative methods — 168
- 6.4 Difference methods — 176
- 6.5 Finite element methods — 181
- 6.6 Wavelet methods — 190
- Further reading — 199

7 Optimization — 200

- 7.1 Unconstrained optimization — 200
- 7.2 The variational method — 208
- 7.3 The simplex method — 215
- 7.4 Fermat rules — 239
- 7.5 Karush–Kuhn–Tucker optimality conditions — 243
- 7.6 Primal-dual pairs of optimization — 252
- 7.7 Case studies — 259
- Further reading — 260

8 Data envelopment analysis — 262

- 8.1 Charnes–Cooper–Rhodes DEA models — 262
- 8.2 Banker–Charnes–Cooper DEA models — 272
- 8.3 One-stage and two-stage methods — 274
- 8.4 Advanced DEA models — 276
- 8.5 Software and case studies — 284
- Further reading — 285

9 Risk assessments — 287

- 9.1 Decision rules under uncertainty — **287**
- 9.2 Decision trees — **291**
- 9.3 Fractile and triangular methods — **294**
- 9.4 The ε -constraint method — **303**
- 9.5 The uncertainty sensitivity index method — **308**
- 9.6 The partitioned multiobjective risk method — **313**
- 9.7 The multiobjective multistage impact analysis method — **316**
- 9.8 Multiobjective risk impact analysis method — **317**
- 9.9 The Leslie model — **327**
- 9.10 Leontief's and inoperability input-output models — **331**
- Further reading — **334**

10 Life cycle assessments — 336

- 10.1 Classic life cycle assessment — **336**
- 10.2 Exergetic life cycle assessment — **339**
- 10.3 Ecologically-based life cycle assessment — **340**
- 10.4 Case studies — **342**
- Further reading — **343**

11 Networks — 345

- 11.1 Neural networks — **345**
- 11.2 Complex networks — **352**
- 11.3 Downscaling analysis — **373**
- 11.4 Streaming data on networks — **376**
- Further reading — **383**

Index — 385
