1	Introduction	1
2	Theoretical Background	9
2.1	Groups as intermediaries	9
2.2	Financial intermediation and signalling	12
2.3	Financial intermediation and reputation	14
2.4	The potential of sorting behaviour	16
2.5	The vitality of incentives	17
3	Data	23
3.1	Credit profile	25
3.2	Loan-specific variables	27
3.3	Social collateral and self-disclosure	27
3.4	Group characteristics	29

4	Probit Models of Loan Performance	33
4.1	Single-equation probit models	33
4.2	Potential omitted variable bias	35
4.3	Group selectivity or self-selection?	38
5	Bivariate Probit Models	45
5.1	Why not a matching method?	45
5.2	Bivariate probit with sample selection	47
5.3	Results	52
5.4	Validity of the instruments	57
5.5	Robustness check with alternative measures of the dependent variable	59
5.6	Heterogeneity in the group effect	60
5.7	Methodological shortcomings	67
6	Conclusion	73
	Bibliography	85
