List of Abbreviations *xi*

1	The Emergence of “Redox Polymers” in the Field of Energy-Storage Applications	1
	Study Goals	1
1.1	An Introduction to Battery Systems	1
1.2	Redox Polymers: A Short View on Their Long History	3
1.2.1	The First Era of Redox Polymers	4
1.2.2	The Second Era of Redox Polymers	5
1.2.3	The Third Era of Redox Polymers	9
	References	10
2	Polymer-Containing Batteries	17
	Study Goals	17
2.1	Introduction	17
2.2	Working Principles	21
2.3	Characterization of Energy-Storage Devices	23
2.3.1	Performance Parameters	23
2.3.2	Charging/Discharging Characteristics	25
2.4	Battery Housing	27
2.5	Solid-State Batteries Incorporating Polymers, as Active Materials	30
2.5.1	Working Principle	31
2.5.2	Material Requirements	33
2.6	Capacitors Incorporating Polymers, as Active Materials	37
2.6.1	Historic Development and Working Principle	37
2.6.2	Material Requirements	41
2.7	Redox-Flow Batteries Incorporating Polymers as Active Materials	44
2.7.1	Working Principle	46
2.7.2	Materials Requirements	47
2.7.3	Aqueous pRFBs	50
2.7.4	Organic pRFBs	51
2.7.5	Suspension RFBs	53
2.8	Concluding Remarks	58
	References	59

3	Redox Polymers: Architectures, Synthesis, and Characterization	69
	Study Goals	69
3.1	Introduction	69
3.2	Polymer Architecture vs. Battery Cell Performance	70
3.3	Polymer Architectures	72
3.3.1	Homopolymers	72
3.3.2	Copolymers	73
3.3.2.1	Alternating Copolymers	74
3.3.2.2	Statistical and Gradient Copolymers	76
3.3.2.3	Block Copolymers	77
3.3.3	Miscellaneous Polymer Architectures	80
3.4	Polymerization Methods	88
3.4.1	Step-Growth Polymerizations	89
3.4.2	Chain-Growth Polymerizations	91
3.4.2.1	Free-Radical Polymerization	91
3.4.2.2	Controlled Radical Polymerization	92
3.4.2.3	Anionic Polymerization	100
3.4.2.4	Cationic Polymerizations	102
3.4.2.5	Ring-Opening Metathesis Polymerizations (ROMP)	102
3.4.3	Redox Polymerizations	103
3.5	TEMPO-Containing Redox Polymers: A Case Study on How the Backbone Structure Influences the Polymeric Properties	105
3.6	Characterization of Redox Polymers	109
3.6.1	Cyclic Voltammetry (CV)	109
3.6.2	Electrochemical Impedance Spectroscopy (EIS)	115
3.6.3	Electrochemical Methods Coupled to Other Analytical Techniques	117
3.7	Concluding Remarks	120
	References	121
4	Conjugated Polymers in the Context of Energy-Storage Applications	133
	Study Goals	133
4.1	Introduction	133
4.2	The Classic Conjugated Polymers at a Glance	137
4.2.1	Polyaniline (Pani)	137
4.2.2	Polypyrrole (PPy)	141
4.2.3	Polythiophene (PT) and PEDOT:PSS	144
4.2.4	Conjugated Polymers for Energy-Storage Applications: General Considerations	147
4.3	Conjugated Polymers, as Active Materials for Battery Systems	150
4.3.1	Polyacetylene	151
4.3.2	Polyaniline	156
4.3.3	Polypyrrole	164
4.3.4	Polythiophene, PEDOT, and Related Polymers	175
4.3.5	Beyond the “Big Three”: Miscellaneous Conjugated Polymers	182
4.3.5.1	Poly(<i>p</i> -phenylene)	182

4.3.5.2	Polyindole	184
4.4	Concluding Remarks	187
	References	188
5	Redox-Active, Sulfur-Containing Polymers	203
	Study Goals	203
5.1	Introduction	203
5.2	Fundamentals of Sulfur-Containing Batteries	204
5.3	Composite Electrodes Incorporating Sulfur and Conductive Polymers	206
5.3.1	Polypyrrole, as the Matrix Polymer	207
5.3.2	Polyaniline, as the Matrix Polymer	210
5.3.3	Polythiophene, as the Matrix Polymer	214
5.3.4	Miscellaneous Matrix Polymers	216
5.4	Sulfur-Containing Polymers in Battery Applications	220
5.4.1	Polymers Containing Disulfide Moieties	220
5.4.2	Polymers Containing Oligosulfide or Polysulfide Moieties	226
5.4.3	Beyond Sulfides: Polymers Containing Other Redox-Active Organosulfur Moieties	237
5.5	Concluding Remarks	245
	References	246
6	Radical-Containing Polymers for Energy-Storage Applications	255
	Study Goals	255
6.1	Introduction	255
6.2	Organic Radical Polymers	258
6.2.1	Free-Radical Moieties Used in ORPs	258
6.2.2	Influence of the Backbone Structure on the ORP Properties	262
6.2.3	Influence of the Polymer Architecture on the ORP Properties	263
6.3	TEMPO-Containing Polymers for Energy-Storage Applications	272
6.3.1	TEMPO-Containing Polymers in Solid-State Batteries	272
6.3.1.1	The Success Story of PTMA	272
6.3.1.2	Beyond PTMA: Polymers with Various Backbone Structures	279
6.3.2	TEMPO-Containing Polymers in Flow-Cell Applications	286
6.4	Beyond TEMPO: Other Nitroxyl Moieties in ORPs	292
6.5	Miscellaneous Free-Radical Moieties in ORPs	295
6.6	Concluding Remarks	299
	References	301
7	Polymers Equipped with Redox-Active Quinone Moieties	309
	Study Goals	309
7.1	Introduction	309
7.2	General Considerations Regarding Carbonyl Compounds, as Active Electrode Materials	312
7.3	Quinone-Containing Polymers for Energy-Storage Applications	313

7.3.1	Polymers with Quinone Moieties Within the Backbone	315
7.3.2	Polymers with Quinone Moieties, as Side Chains	326
7.4	Polyketone-Containing Polymers for Energy-Storage Applications	330
7.5	Polymers, Which Contain Miscellaneous Redox-Active Carbonyl Moieties	334
7.5.1	Side-Chain Polymers, Which Contain Redox-Active Carbonyl Moieties	334
7.5.2	Main-Chain Polymers, Which Contain Redox-Active Carbonyl Moieties	338
7.6	Concluding Remarks	343
	References	344
8	Polyimides and Related Polymers in Battery Applications	349
	Study Goals	349
8.1	Introduction	349
8.2	Conventional PIs, as Active Materials	353
8.3	Non-conventional PIs, as Active Materials	363
8.3.1	Polyimides with Non-innocent Moieties Within the Spacer	363
8.3.2	Polyimides with Substituents on the Diimide Core	371
8.4	Conjugated Polymers Incorporating the Core of Diimide Moieties	374
8.5	Multidimensional Polyimides	377
8.6	Miscellaneous Polymer Structures Incorporating Redox-Active Imide Moieties	380
8.7	Concluding Remarks	383
	References	384
9	Polymers Containing Redox-Active Viologen-Type Moieties	391
	Study Goals	391
9.1	Introduction	391
9.2	Viologen-Containing Polymers for Solid-State Batteries	393
9.3	Viologen-Containing Polymers for Supercapacitors	403
9.4	Viologen-Containing Polymers for Redox-Flow Batteries	406
9.4.1	Aqueous Redox-Flow Batteries	407
9.4.2	Nonaqueous Redox-Flow Batteries	409
9.5	Concluding Remarks	413
	References	414
10	Polymers: Containing Redox-Active <i>N</i>-Heterocyclic Moieties	419
10.1	Introduction	419
10.2	Polymers: Containing Triphenylamine Moieties	421
10.3	Polymers: Containing Redox-Active Carbazole Moieties	435
10.4	Polymers: Containing Redox-Active 5,10-Dihydrophenazine Moieties	443

10.5	Polymers: Containing Redox-Active Phenazine Moieties	450
10.6	Polymers: Containing Redox-Active Phenothiazine or Phenoxazine Moieties	462
10.7	Concluding Remarks	470
	References	471
11	Redox-Active Metallopolymers	479
	Study Goals	479
11.1	Introduction	479
11.2	Applications Related to Redox-Active Metallopolymers	481
11.3	Ferrocene-Containing Polymers for Energy-Storage Applications	482
11.4	Beyond Ferrocene: Other Types of Redox-Active Metallopolymers	493
11.5	Concluding Remarks	502
	References	502
12	Students' Section: Representative Exercises on Redox Polymers and Their Usage in Energy-Storage Applications	509
12.1	Introduction	509
12.2	Problems	509
	References	519
	Index	521
