Preface *ix*

1	Calibration Fundamentals	1
1.1	Analytical Context	1
1.2	Principles of Analytical Calibration	2
1.3	Calibration Standards and Models	5
1.4	Calibration Procedures and Methods	7
1.5	Calibration in the Context of Measurement Errors	8
1.5.1	Uncontrolled Analytical Effects	9
1.5.2	Elimination and Compensation of Uncontrolled Effects	11
1.6	Calibration in Qualitative Analysis	14
1.7	Calibration in Quantitative Analysis	18
1.8	General Rules for Correct Calibration	22
	References	24
2	"Calibration-Free" Analysis	25
2.1	Novel Approach	25
2.2	Empirical Calibration	26
2.3	Theoretical Calibration	30
2.3.1	Fixed Models	30
2.3.2	Flexible Models	36
	References	45
3	Calibration Methods in Qualitative Analysis	47
3.1	Classification	47
3.2	External Calibration Methods	49
3.2.1	External Standard Method	49
3.2.2	Reference Sample Method	59
3.3	Internal Calibration Methods	71
3.3.1	Internal Standard Method	71
3.3.2	Indirect Method	75
3.4	Standard Addition Method	80
	References	83

4	Introduction to Empirical Calibration in Quantitative Analysis	85
4.1	Classification	85
4.2	Formulation of Model Functions	86
4.3	Examination of Interference Effect	93
4.4	Mathematical Modeling of Real Function	98
	References	100
5	Comparative Calibration Methods	103
5.1	External Calibration Methods	103
5.1.1	External Standard Method	103
5.1.1.1	Modified Procedures	110
5.1.2	Dilution Method	115
5.2	Internal Calibration Methods	125
5.2.1	Internal Standard Method	125
5.2.2	Indirect Method	133
	References	141
6	Additive Calibration Methods	143
6.1	Basic Aspects	143
6.2	Standard Addition Method	144
6.2.1	Extrapolative Variant	144
6.2.1.1	Modified Procedures	155
6.2.2	Interpolative Variants	162
6.2.3	Indicative Variant	167
6.3	Titration	172
6.4	Isotope Dilution Method	180
6.4.1	Radiometric Isotope Dilution	182
6.4.2	Isotope Dilution Mass Spectrometry	189
6.4.2.1	Modified Procedures	197
	References	199
7	Calibration in Nonequilibrium Conditions	203
7.1	Flow Injection Analysis	203
7.1.1	Manipulation Techniques	205
7.1.2	Gradient Technique	212
7.2	Kinetic Analysis	220
	References	231
8	Complex Calibration Approaches	233
8.1	Extrapolative Methods	233
8.1.1	Extrapolative Indirect Method	234
8.1.2	Extrapolative Internal Standard Method	239
8.1.3	Extrapolative Dilution Method	244
8.2	Mixed Methods	252

8.3	Combined Methods	256
8.3.1	Integrated Calibration Methods	256
8.3.1.1	Simple Integrated Method	256
8.3.1.2	Complementary Dilution Method	261
8.3.2	Generalized Calibration Strategy	270
8.3.2.1	Versatile Flow Injection Calibration Module	276
8.3.3	Standard Dilution Analysis	280
	References	286

9 Calibration Approaches for Detection and Examination of Interference Effects 289

9.1	Introduction	289
9.2	Simple Procedures for Detection and Examination of Interference Effects	290
9.3	Detection and Compensation of Additive Interference Effect	295
9.3.1	Interpolative Procedure	297
9.3.2	Extrapolative Procedure	301
9.3.3	Integrated Procedure	308
	References	311

10 Calibration-Based Procedures for Correction of Preparative Effects 313

10.1	Introduction	313
10.2	Specific Procedures	314
10.3	Surrogate Recovery Method	316
10.3.1	Reliability of the Method	318
10.3.2	Interpretations of the Method	321
10.3.3	Recovery vs. Interference Effect	324
10.3.4	Recovery vs. Speciation Effect	329
	References	333

11 Calibration-Related Applications of Experimental Plans 335

11.1	Introduction	335
11.2	Examination of Interference Effects	337
11.3	Modeling of Real Functions	342
11.4	Multicomponent Analysis	347
	References	356

12 Final Remarks 359
