Preface *xi*

1	Calibration of DEM Parameters	1
	<i>Corné Coetzee and André Katterfeld</i>	
	Abbreviations and Acronyms	1
1.1	Introduction	1
1.2	Basic DEM Theory	2
1.2.1	The Calculation Cycle	3
1.2.2	Contact Models	4
1.3	DEM Application and Calibration Philosophies	5
1.4	Physical Bulk Properties	6
1.4.1	Bulk Density and Porosity	6
1.4.2	Bulk Friction	6
1.4.3	Dissipation of Energy	7
1.4.4	Bulk Stiffness	7
1.4.5	Bulk Cohesion and Adhesion	7
1.5	DEM Parameters and Their Relation to Bulk Properties	8
1.5.1	Particle Shape	8
1.5.1.1	Non-spherical Particles	8
1.5.1.2	Spherical Particles	13
1.5.1.3	Shape Selection	13
1.5.2	Particle Size Distribution and Scale	13
1.5.3	Particle Density	14
1.5.4	Contact Damping	15
1.5.5	Contact Stiffness	15
1.5.6	Particle–Particle Sliding Friction	15
1.5.7	Particle–Wall Sliding Friction	16
1.5.8	Contact Rolling Friction	16
1.6	Overview of Calibration Tests	16
1.6.1	Basic Requirements for Calibration Tests	17
1.6.2	Calibration Tests	17
1.7	Recommended Calibration Procedure for Non-cohesive and Slightly Cohesive Materials	24

1.7.1	Ambiguous Parameter Combinations	24
1.7.2	Solving for an Unambiguous Parameter Combination	24
1.8	Outlook on the Calibration of Cohesive Materials	29
1.9	Optimisation Approaches Applied to the Calibration Process	31
1.10	Conclusion	34
	Glossary	34
	References	35
2	Simulation of Transfer Chutes	41
	<i>Dusan Ilic and André Katterfeld</i>	
2.1	Introduction	41
2.2	Practicalities – Balancing Conflicting Objectives	42
2.3	The Suggested Approach	43
2.4	Basic Design Principles – The Continuum Approach	44
2.5	DEM Simulation of Transfer Chutes – General Comments	48
2.6	General Flow Analysis and Validation	50
2.6.1	Discharge and Trajectory	51
2.6.2	Accelerated Flow	52
2.6.3	Internal Shearing Flow	53
2.7	Quantitative Validation of Forces in DEM Simulation	54
2.8	Belt Mistracking	55
2.9	Simulation of Build-Up and Blockage of Cohesive Material	57
2.10	Prediction of Wear	61
2.11	Prediction of Dust	67
2.12	Interrelationships Between Wear, Build-Up, and Flow	70
2.13	Conclusion	71
	Nomenclature	72
	References	73
3	Belt Conveyor Design and Troubleshooting	79
	<i>Craig A. Wheeler, Peter W. Robinson, Paul J. Munzenberger, Jiahe Shen, Michael J. Carr, Jayne I. O'Shea, and Shaun C. Reid</i>	
	Abbreviations	79
3.1	Introduction	79
3.2	Belt Conveyor Design	80
3.2.1	Static Analysis Design Methods	80
3.2.1.1	Numerical Analysis of Indentation Rolling Resistance	81
3.2.1.2	Simulation of Indentation Rolling Resistance with the Finite Element Method	82
3.2.1.3	Numerical Analysis of Belt and Bulk Solid Flexure Resistance	86
3.2.2	Dynamic Analysis Design Methods	89
3.2.2.1	Modelling of the Conveyor Belt Using Finite Elements	91
3.2.2.2	Starting Sequences of a Conveyor System	94
3.2.2.3	Outcomes of Dynamic Analysis	95
3.2.3	Belt Conveyor Component Design	95
3.2.3.1	Conveyor Belt Pulley Design and Analysis	96

3.2.3.2	Idler Roll Seal Design and Analysis	98
3.3	Belt Conveyor Troubleshooting	99
3.3.1	Belt Wear	100
3.3.2	Belt Tracking	102
3.3.3	Spillage and Dust	103
	References	104
4	Multibody Dynamics and Discrete Element Method Co-Simulations for Large-Scale Industrial Equipment	107
	<i>Dingena L. Schott and Javad Mohajeri</i>	
4.1	Introduction	107
4.2	Categorisation and Publications on DEM-MBD	109
4.2.1	Load-Bearing Terramechanics	116
4.2.2	Load-Loosening Terramechanics	117
4.2.3	Bulk Material Processing	118
4.2.4	Bulk Material Handling	120
4.2.5	Vibration Attenuation	122
4.3	Developing a DEM and MBD Coupling	123
4.3.1	Verification Tests	124
4.3.1.1	Particle-Wall Collision	125
4.3.1.2	Pendulum	125
4.3.1.3	Translating Spring Damper System	127
4.3.1.4	Torsional Spring Damper System	127
4.3.2	Coupling Stability	129
4.4	How DEM-MBD Models Can be Used	129
4.4.1	DEM Calibration	130
4.4.2	Model Validation	132
4.4.3	Experimenting with a Validated Model	134
4.5	Outlook	136
	References	137
5	Simulation of Pneumatic Conveying	145
	<i>Don McGlinchey</i>	
5.1	Introduction	145
5.1.1	Pneumatic Conveying – Modes of Flow	145
5.1.2	Definition of Pneumatic Conveying Terms	146
5.1.2.1	Solids Loading Ratio	146
5.1.2.2	Density Ratio	146
5.1.2.3	Volume Fraction	147
5.1.2.4	Conveying Characteristics	147
5.1.3	Pressure Drop Prediction Versus Material Behaviour	148
5.2	Single Fluid Model	150
5.2.1	Commonly Available Models in Commercial and Open-Source Software	152
5.3	Two Fluid Models	153

5.3.1	CFD TFM in Commercial (ANSYS Fluent) and Open Source (MFiX) Codes	154
5.3.2	Particle Trajectory Models	155
5.3.3	Granular Kinetic Theory (GKT)	156
5.3.3.1	The Frictional Regime	158
5.3.3.2	The Kinetic Regime	160
5.4	Coupled DEM–CFD Models	161
5.4.1	Forces on Particles	161
5.4.2	Fluid–Particle Dynamics	162
5.4.3	Single Particle Moving in an Infinite Fluid	162
5.4.3.1	Fluid-Particle Drag	162
5.4.3.2	Lift Forces	163
5.4.4	Fluid Drag in Multi-Particle System	164
5.4.4.1	Effect of Voidage/Solid Concentration	164
5.4.4.2	Non-Spherical Particles	166
5.4.5	Particle–Particle Interaction	166
5.4.6	Contact Force	167
5.4.6.1	Normal Contact Force	167
5.4.6.2	Tangential Force	167
5.5	Summary	168
	Nomenclature	168
	References	169
	Further Reading	171
6	Modelling and Simulation of Erosive Wear and Particle Breakage in Pneumatic Conveying	177
	<i>Rahul Tarodiya and Avi Levy</i>	
6.1	Introduction	177
6.1.1	Erosive Wear	177
6.1.2	Particle Breakage	178
6.1.3	Modelling Approaches to Simulate Pneumatic Conveying Pipeline	179
6.2	One-dimensional Particle Breakage Modelling of the Conveying Pipeline	180
6.2.1	One-dimensional Two-phase Flow Model	181
6.2.2	One-dimensional Breakage Algorithm (ODBA)	182
6.2.2.1	Machine Functions	185
6.2.3	Comminution Functions	189
6.2.3.1	Initial Strength Distribution Function	189
6.2.3.2	Equivalence Function	190
6.2.3.3	Fatigue Function	191
6.2.3.4	Breakage Function	191
6.2.4	Results and Discussion	192
6.3	One-dimensional Surface Erosion Modelling of the Conveying Pipeline	193
6.3.1	Erosion Models	194

6.3.2	Results and Discussion	195
6.4	Conclusion	196
	References	197
7	Discrete Element Modelling of Pharmaceutical Powder Handling Processes	199
	<i>Chao Zheng, Mohammadreza Alizadeh Behjani, Jiawei Hu, and Chuan-Yu Wu</i>	
	Abbreviations	199
7.1	Introduction	199
7.2	Discrete Element Method	201
7.2.1	DEM principles	201
7.2.2	DEM Calibration	204
7.2.3	DEM Validation	206
7.3	DEM Modelling of Powder Mixing/Segregation	207
7.3.1	DEM Modelling of Powder Mixing	207
7.3.2	DEM Modelling of Segregation	208
7.4	DEM Modelling of Continuous Blending	210
7.5	DEM Modelling of Powder Filling and Hopper Discharging	212
7.6	DEM Modelling of Twin Screw Granulation	217
7.7	DEM Modelling of Milling	220
7.8	DEM Modelling of Dry Powder Inhalation	220
7.9	Summary and Perspectives	223
	Nomenclature	223
	References	224
8	Algorithms and Capabilities of Solidity to Simulate Interactions and Packing of Complex Shapes	231
	<i>Jiansheng Xiang and John-Paul Latham</i>	
	Abbreviation	231
8.1	Introduction	231
8.2	Mathematical Models	232
8.2.1	Governing Equations	233
8.2.1.1	Y3D-D: Deformable Solid	233
8.2.1.2	Y3D-R: Rigid Solid	233
8.2.2	Contact Force	234
8.2.3	Code Optimisation and Parallelization	234
8.3	Application of Cube Packing	236
8.3.1	Numerical Simulation Set-up	236
8.3.2	Results and Discussion	237
8.4	Application of the Packing of Platonic and Archimedean Solids	240
8.4.1	Numerical Simulation Set-up	240
8.4.2	Results and Discussion	241
8.4.2.1	Packing Density	241
8.4.2.2	Contact Forces	242
8.4.2.3	Coordination Number	243

8.5	Conclusions	244
	Acknowledgements	245
	References	245
