Preface — VII

1	Fundamentals of functional analysis — 1
1.1	Topological spaces — 1
1.1.1	Topology and base for a topology — 1
1.1.2	Continuity of mappings — 3
1.1.3	Compact spaces — 4
1.2	Metric spaces — 5
1.2.1	Generalities — 5
1.2.2	Completeness — 6
1.2.3	Compactness and completeness — 6
1.2.4	Baire theorem — 8
1.3	Topological vector spaces — 9
1.3.1	Vector spaces — 9
1.3.2	Topology on a vector space — 10
1.3.3	Separation properties — 11
1.3.4	Metrizable topological vector spaces — 12
1.3.5	Seminorms and local convexity — 13
1.4	Normed vector spaces — 14
1.4.1	Generalities — 14
1.4.2	Finite-dimensional normed spaces — 15
1.5	Linear operators — 16
1.5.1	Generalities — 16
1.5.2	Continuity of linear operators — 17
1.5.3	Uniform boundedness principle — 18
1.5.4	The open mapping theorem — 20
1.5.5	The closed graph theorem — 21
1.5.6	Linear functionals — 22
1.5.7	The adjoint of a linear operator — 23
1.6	Hahn–Banach theorem — 24
1.6.1	The analytic form of Hahn–Banach theorem — 24
1.6.2	Geometric forms of Hahn–Banach theorem — 25
1.7	Weak topology — 27
1.8	Weak* topology — 31
1.9	Some classes of Banach spaces — 35
1.9.1	Reflexive spaces — 35
1.9.2	Uniformly convex Banach spaces — 35
1.9.3	Strictly convex Banach spaces — 37
1.9.4	Smooth Banach spaces — 38
1.9.5	Banach spaces with Dunford–Pettis property — 38

1.10	Duality mapping — 41
1.11	Convex function and its subdifferentials — 45
1.11.1	Convex functions — 45
1.11.2	Lower semicontinuous functions — 46
1.11.3	Subdifferentials — 46
1.12	Retracts of normed spaces — 47
1.13	Banach algebras — 48
1.14	Bochner integral — 50
1.14.1	Measurable functions — 50
1.14.2	Bochner integrable functions — 52
1.14.3	Komura theorem — 54
1.15	Superposition operators — 58
1.15.1	Scalar-valued functions — 58
1.15.2	Vector-valued functions — 58
1.15.3	The case of weighed Lebesgue spaces — 59
1.16	Sobolev functions — 60
1.17	Sobolev spaces — 61
1.17.1	Sobolev space in dimension one — 61
1.17.2	Sobolev spaces in higher dimension — 63
1.18	Bibliographical remarks — 65
2	A short introduction to semigroups of linear operators — 66
2.1	Strongly continuous semigroups — 66
2.2	Uniformly continuous semigroups — 70
2.3	The infinitesimal generator of a semigroup — 72
2.4	Generation results — 74
2.4.1	Hille–Yosida theorem — 75
2.4.2	Lumer–Phillips theorem — 79
2.5	Hille–Yosida exponential formula — 81
2.6	Bibliographical remarks — 83
3	Accretive operators in Banach spaces — 84
3.1	Introduction — 84
3.1.1	Linear case — 84
3.1.2	Nonlinear case — 88
3.2	Accretive operators — 90
3.3	Examples of accretive operators — 91
3.4	Properties of accretive operators — 94
3.5	m -accretive operators — 97
3.6	Examples of m -accretive operators — 100
3.7	Properties of m -accretive operators — 105
3.8	Domains of m -accretive operators — 110

3.9	Perturbation of m -accretive operators —	115
3.10	Crandall–Liggett exponential formula —	120
3.11	Quasiaccretive operators —	128
3.12	Bibliographical remarks —	128
4	Abstract Cauchy problem —	129
4.1	Introduction —	129
4.2	Strong solutions for the Cauchy problem —	131
4.3	The homogeneous problem for accretive operators —	133
4.4	Integral solutions —	138
4.5	The inhomogeneous problem for accretive operators —	152
4.5.1	Linear case —	160
4.5.2	Regularization of solutions —	164
4.6	The abstract Cauchy problem for quasiaccretive operators —	168
4.6.1	Regularization —	175
4.6.2	Lipschitz perturbations of m -quasiaccretive operators —	179
4.6.3	Local Lipschitz perturbations —	180
4.7	Bibliographical remarks —	182
5	Solvability of nonlinear evolution equations —	183
5.1	Lebowitz–Rubinow model —	183
5.1.1	Lebowitz–Rubinow model for finite maximum cell cycle length —	184
5.1.2	Lebowitz–Rubinow model for infinite maximum cell cycle length —	200
5.2	Rotenberg’s model —	217
5.2.1	The functional setting of the problem and preliminaries —	219
5.2.2	Local boundary conditions —	222
5.2.3	Nonlocal boundary conditions —	229
5.3	A transport equation with delayed neutrons —	240
5.3.1	The functional setting of the problem and preliminaries —	241
5.3.2	Existence and uniqueness results —	243
5.3.3	Some lemmas —	246
5.3.4	Proofs —	252
5.4	Bibliographical remarks —	255
6	Metric fixed point theorems —	256
6.1	Introduction —	256
6.2	The Banach contraction principle —	256
6.3	Some generalizations of the BCP —	261
6.3.1	Nonlinear contraction mappings —	261
6.3.2	Separate contraction mappings —	262
6.3.3	Expansive mappings —	263
6.4	Nonlinear expansive mappings —	264

6.5	Nonexpansive mappings —	266
6.5.1	Generalities —	266
6.5.2	Hilbert spaces —	268
6.5.3	Uniformly convex Banach spaces —	269
6.5.4	Normal structure —	271
6.5.5	Fixed points in unbounded sets —	274
6.6	Fixed points for ϕ -expansive mappings —	276
6.7	Zeros of m -accretive operators —	281
6.8	Zeros of m -accretive and ϕ -expansive operators —	288
6.9	Bibliographical remarks —	292
7	Topological fixed point theorems —	293
7.1	Introduction —	293
7.2	Brouwer and Schauder fixed point theorems —	295
7.2.1	Brouwer fixed point theorem —	295
7.2.2	Schauder fixed point theorem —	297
7.3	Set contractive mappings —	301
7.3.1	Measure of noncompactness —	301
7.3.2	Darbo-type fixed point theorems —	306
7.3.3	Sadovskii-type fixed point theorems —	309
7.4	On maps f such that $I - f$ is ϕ -expansive —	315
7.5	Tychonoff-type fixed point theorems —	320
7.5.1	Tychonoff fixed point theorem —	320
7.5.2	Weakly sequentially continuous maps —	323
7.6	ws-compact and ww-compact mappings —	324
7.7	Measure of weak noncompactness —	329
7.7.1	Axiomatic approach —	329
7.7.2	De Blasi measure of weak noncompactness —	330
7.7.3	Banaś-Knap measure of weak noncompactness —	335
7.8	Darbo-Sadovskii-type fixed point theorems —	337
7.9	A Schaefer-type fixed point theorem —	346
7.10	Convex-power condensing mappings —	347
7.11	Leray-Schauder-type fixed point theorems —	349
7.12	Fixed point theorems for a sum of mappings —	354
7.12.1	Krasnosel'skii-type fixed point theorems —	354
7.12.2	Krasnosel'skii-Leray-Schauder-type fixed point theorems —	379
7.12.3	Krasnosel'skii-Schaefer-type fixed point theorems —	382
7.13	Bibliographical notes —	386
8	Solvability of nonlinear boundary value problems —	388
8.1	A Dirichlet problem —	388
8.2	Existence results for a nonlinear functional integral equation —	391

8.3	A nonlinear transport equation with delayed neutrons —	397
8.3.1	Introduction —	397
8.3.2	Notations and preliminaries —	397
8.3.3	Regular collision operators —	400
8.3.4	Compactness —	405
8.3.5	A measure of weak noncompactness —	410
8.3.6	Existence results —	412
8.4	A nonlinear singular neutron transport equation —	416
8.4.1	Introduction —	416
8.4.2	Notations and preliminaries —	416
8.4.3	Preparatory results —	419
8.4.4	Existence results —	426
8.5	Bibliographical remarks —	430

Bibliography — 431

Index — 441
