Introduction — VII

1	DN-systems: theory — 1
1.1	Preliminaries — 1
1.1.1	Electrical circuits with ideal diode — 1
1.1.2	A special case — 3
1.1.3	Equations with discontinuous right hand side — 4
1.2	Convex sets, cones, and projections — 5
1.2.1	Definitions and examples — 5
1.2.2	Projections onto closed convex sets — 11
1.2.3	The normal cone — 16
1.2.4	The adjoint cone — 19
1.2.5	The tangent cone — 24
1.2.6	Bound cones and faces — 28
1.3	Existence and uniqueness of solutions — 31
1.3.1	Statement of the problem — 31
1.3.2	Continuation of the right hand side — 34
1.3.3	Euler polygons — 39
1.3.4	Solvability in the original set — 41
1.3.5	Uniqueness and continuous dependence — 41
1.4	Oscillations in DN-systems — 46
1.4.1	Forced oscillations — 46
1.4.2	Closed trajectories of 2D systems — 49
1.4.3	Proof of the main theorem — 56
1.4.4	Conditions for orbital stability — 66
1.4.5	Orbitally stable trajectories — 73
2	DN-systems: applications — 81
2.1	Electrical circuits with diode converters — 81
2.1.1	Examples of diode voltage converters — 81
2.1.2	Diode nonlinearities as operators — 85
2.1.3	The outer characteristic of a diode converter — 86
2.1.4	An example — 88
2.1.5	Numerical experiments — 90
2.1.6	Electrical diode circuits as DN-systems — 92
2.2	Convex programming and DN-systems — 101
2.2.1	Statement of the problem — 101
2.2.2	Some differentiability properties — 102
2.2.3	An upper limit estimate — 104
2.2.4	Numerical experiments — 105

2.3	Biological systems with size constraints —	107
2.3.1	The classical predator-prey model —	107
2.3.2	Autooscillations in a predator-prey model —	111
2.3.3	Two examples —	114
3	Equations with nonlinear differentials —	123
3.1	Locally explicit models of hysteresis elements —	124
3.1.1	Locally explicit equations: basic notions —	124
3.1.2	Locally explicit equations: basic properties —	125
3.1.3	An example —	129
3.2	Equations with relay —	131
3.2.1	Hysteresis relays: heuristic description —	131
3.2.2	Relays as locally explicit models —	133
3.2.3	Hysteresis relays: basic properties —	134
3.2.4	Generalized relays: basic properties —	146
3.3	Stops and plays —	153
3.3.1	The stop operator —	153
3.3.2	The play operator —	156
3.3.3	An alternative model for stop operators —	163
3.3.4	M-switches —	165
3.3.5	A control-correction system —	170
3.4	Systems with locally explicit equations —	172
3.4.1	Closed systems with relay —	172
3.4.2	Systems with M-switch —	175
3.4.3	Closed systems with stop-type hysteresis element —	185
3.4.4	On ψ -stable solutions of dynamical systems —	187
3.4.5	The ψ -stable behaviour of a temperature regulator —	198
3.5	Linear systems with non-smooth action —	209
3.5.1	Statement of the problem —	209
3.5.2	Unique solvability —	210
3.5.3	An example —	213
4	Smooth approximating models —	215
4.1	Smooth relay models with hysteresis —	215
4.1.1	Equivalence of models —	216
4.1.2	A smooth model —	216
4.1.3	The nearness theorem: formulation —	220
4.1.4	Some estimates —	224
4.1.5	The nearness theorem: proof —	226
4.2	Planar systems with one relay —	232
4.2.1	Statement of the problem —	232
4.2.2	A periodicity criterion —	232

4.2.3	Numerical analysis —	235
4.2.4	Nearness estimates —	237
4.3	Smooth description of stops and plays —	238
4.3.1	Statement of the problem —	238
4.3.2	Smooth models —	239
4.3.3	Stops with smooth inputs —	240
4.3.4	Stops with continuous inputs —	241
4.3.5	Plays with continuous inputs —	243
4.3.6	Numerical analysis and nearness estimates —	244
4.4	Smooth description of DN models —	246
4.4.1	Statement of the problem —	246
4.4.2	Exactness of smooth descriptions —	246
4.4.3	A special case —	248
4.4.4	An example —	251
4.4.5	Numerical analysis and nearness estimates —	254

Appendix: Mathematica Procedures — 257
