

Contents

1	Introduction to Systems	1
1.1	System Concept	1
1.2	Systems Classification	2
1.2.1	Static/Dynamic	2
1.2.2	Stochastic/Deterministic	3
1.2.3	Continuous/Discrete/Event Discrete	3
1.2.4	Closed/Open Loop	4
1.3	Systems Description	5
1.3.1	External Description.....	6
1.3.2	Internal Description.....	8
2	System Modeling.....	13
2.1	System Model	13
2.2	System Dynamic Equations	15
2.3	Electrical Systems.....	19
2.4	Mechanical Systems	24
2.5	Hydraulic Systems	30
2.6	Thermal Systems	33
2.7	Hybrid Systems.....	36
3	System Description	43
3.1	Continuous Time Systems	43
3.2	Linear and Invariant Time Systems	45
3.3	Systems Linearization.....	46
3.4	Laplace Transform.....	51
3.4.1	Direct Laplace Transform	52
3.4.2	Inverse Laplace Transform.....	55
3.5	Transfer Function.....	62
3.6	The State Space Approach.....	67
3.6.1	Relation between Transfer Function and State Space Approaches.....	72
3.7	Block Diagrams	76
4	System Response Analysis.....	85
4.1	System Time Response.....	85
4.2	System Transient Response	86

4.3	Root Locus.....	107
4.3.1	Root Locus Recipe.....	109
4.3.2	Effects of Adding Poles/Zeros	117
4.4	Identification.....	121
4.4.1	First-Order System Identification.....	121
4.4.2	Second-Order System Identification	122
4.5	System Stability	126
4.6	System Stationary Response	131
4.6.1	Steady-State Error for Step Reference	133
4.6.2	Steady-State Error for Ramp Reference.....	134
5	Introduction to Control Systems	137
5.1	Control Systems.....	137
5.2	Basic Control Actions.....	140
5.3	PID Controller	142
5.3.1	Proportional Control.....	144
5.3.2	Integral Control	146
5.3.3	Derivative Control.....	148
5.3.4	PID Summary.....	150
5.4	Design of Controllers: Ziegler-Nichols Techniques	150
5.4.1	Ziegler-Nichols Technique in Open Loop.....	151
5.4.2	Ziegler-Nichols Technique in Close Loop	153
5.5	Applications.....	161
6	System Simulation	167
6.1	Simulation Objectives.....	167
6.2	Numerical Methods	169
6.2.1	Explicit Numerical Methods	169
6.2.2	Implicit Numerical Methods	170
6.2.3	Multistep Numerical Methods.....	174
6.2.4	Integration Step Selection	174
6.3	Systems Simulation in SIMULINK.....	177
6.4	Systems Simulation in SIMSCAPE.....	180
6.5	Applications.....	185
Appendix A:	The MATLAB System Control Toolbox	195
A.1	Creation of Models.....	195
A.2	Transfer Function	195
A.3	Zeros, Poles, and Gain.....	196
A.4	State Space	197
A.5	Access to Model Data	198
A.6	Building Complex Models	199
A.7	Conversion between Models	202
A.8	Time Response	202
Appendix B:	The <i>rltool</i> Interactive Tutorial	207

Appendix C: The SIMULINK Interactive Tutorial.....213

 C.1 Introduction213

 C.2 Creating a Model215

 C.3 SIMULINK Libraries218

 C.3.1 Continuous Library218

 C.3.2 Source Library220

 C.3.3 Sinks Library223

 C.3.4 Math Operations Library225

 C.3.5 Lookup Table Library.....228

 C.3.6 Discontinuities Library229

 C.3.7 Signal Routing Library231

 C.3.8 Ports and Subsystems Library232

 C.3.9 User-Defined Functions Library234

 C.3.10 Additional Linear Library.....235

Appendix D: The SIMSCAPE Modeling Environment Tutorial 239

 D.1 Introduction 239

 D.2 Creating a Model..... 241

 D.3 SIMSCAPE Libraries..... 244

 D.3.1 Electrical Library 245

 D.3.2 Hydraulic Library..... 246

 D.3.3 Mechanical Library 248

 D.3.4 Thermal Library 249

 D.3.5 Physical Signal Library 250

 D.3.6 Utilities Library 251
