Preface	vii
Literature Recommendations	ix
Acknowledgements	ix
1 Fundamentals of Nonlinear Systems	1
1.1 System Description and System Behavior	1
1.1.1 Linear and Nonlinear Systems.....	1
1.1.2 System Description and Nonlinear Control Loops	2
1.1.3 Equilibrium Points of Nonlinear Systems	5
1.1.4 Example: Satellite	7
1.1.5 Equilibrium Points of Linear Systems	9
1.1.6 Stability and Asymptotic Stability.....	11
1.1.7 Exponential Stability of Equilibrium Points	18
1.1.8 Instability of Equilibrium Points	20
1.1.9 Stability in the Case of Variable Input Signals	24
1.1.10 Limit Cycles	28
1.1.11 Sliding Modes.....	30
1.1.12 Chaos.....	32
1.1.13 Discrete-Time Systems	35
1.2 Solution of Nonlinear Differential Equations	37
1.2.1 Existence of Solutions.....	37
1.2.2 Numerical Solution and Euler Method	41
1.2.3 Accuracy of the Numerical Solution.....	43
1.2.4 The Modified Euler Method	44

1.2.5	The Heun and Simpson Methods	45
1.2.6	The Runge-Kutta Methods	47
1.2.7	Adaptation of the Step Size	49
1.2.8	The Adams-Bashforth Methods	50
1.2.9	The Adams-Moulton Predictor-Corrector Method	52
1.2.10	Stability of Numerical Integration Methods	53
1.2.11	Stiff Systems and Their Solutions	56
1.3	Exercises	58
2	Limit Cycles and Stability Criteria	69
2.1	The Describing Function Method	69
2.1.1	Idea behind the Method	69
2.1.2	Illustrative Example	73
2.1.3	Characteristic Curves and Their Describing Functions ..	75
2.1.4	Stability Analysis of Limit Cycles	82
2.1.5	Example: Power-Assisted Steering System	85
2.2	Absolute Stability	89
2.2.1	The Concept of Absolute Stability	89
2.2.2	The Popov Criterion and Its Application	91
2.2.3	The Aizerman and Kalman Conjectures	97
2.2.4	Example: Controlling a Ship	99
2.2.5	The Circle Criterion	103
2.2.6	The Tsytkin Criterion for Discrete-Time Systems	110
2.3	Lyapunov's Stability Theory	113
2.3.1	The Concept and the Direct Method	113
2.3.2	Illustrative Example	118
2.3.3	Quadratic Lyapunov Functions	119
2.3.4	Example: Mutualism	121
2.3.5	The Direct Method for Discrete-Time Systems	125
2.3.6	The Indirect Method	126
2.3.7	Determining Exponential Stability	127
2.3.8	Example: Underwater Glider	129
2.3.9	Catchment Regions	134
2.3.10	LaSalle's Invariance Principle	137
2.3.11	Instability Criterion	142
2.4	Passivity and Stability	143
2.4.1	Passive Systems	143
2.4.2	Stability of Passive Systems	146
2.4.3	Passivity of Connected Systems	148
2.4.4	Passivity of Linear Systems	151
2.4.5	Example: Transporting System for Material Webs	155
2.4.6	Positive Real Transfer Functions	158
2.4.7	Equivalence of Positive Realness and Passivity	163
2.4.8	Lossless Hamiltonian Systems	168
2.4.9	Example: Self-Balancing Vehicle	174

2.4.10 Dissipative Hamiltonian Systems 179

2.4.11 Example: Separately Excited Direct-Current Machine .. 181

2.4.12 Linear Hamiltonian Systems 184

2.5 Exercises 192

3 Controllability and Flatness 205

3.1 Controllability 205

3.1.1 Definition of Controllability 205

3.1.2 Global and Local Controllability 212

3.1.3 Proving Controllability 214

3.1.4 Example: Industrial Robot 218

3.1.5 Small-Time Local Controllability of Driftless Systems .. 223

3.1.6 Example: Motor Vehicle with Trailer 230

3.1.7 Omnidirectional Controllability 232

3.1.8 Example: Steam Generator 235

3.2 Flatness 238

3.2.1 Basic Concept and Definition of Flatness 238

3.2.2 The Lie-Bäcklund Transformation 243

3.2.3 Example: VTOL Aircraft 246

3.2.4 Flatness and Controllability 250

3.2.5 Flat Outputs of Linear Systems 251

3.2.6 Verification of Flatness 254

3.3 Nonlinear State Transformations 259

3.3.1 Transformations and Transformed System Equations ... 259

3.3.2 Illustrative Example 263

3.3.3 Example: Park Transformation 265

3.3.4 Determining the Transformation Rule 272

3.3.5 Illustration Using Linear Systems 273

3.4 Exercises 276

4 Nonlinear Control of Linear Systems 283

4.1 Control with Anti-Windup 283

4.1.1 The Windup Effect 283

4.1.2 PID Controller with Anti-Windup Element 285

4.1.3 Example: Direct-Current Motor 286

4.1.4 A General Anti-Windup Method 289

4.1.5 Dimensioning the General Anti-Windup Controller 293

4.1.6 Stability 296

4.2 Time-Optimal Control 297

4.2.1 Fundamentals and Fel'dbaum's Theorem 297

4.2.2 Computation of Time-Optimal Controls 299

4.2.3 Example $1/s^2$ 301

4.2.4 Time-Optimal Control of Low-Order Systems 305

4.2.5 Example: Submarine 307

4.2.6 Time-Optimal Pilot Control 311

4.3	Variable Structure Control Without Sliding Mode	312
4.3.1	Fundamentals of Variable Structure Control	312
4.3.2	Piecewise Linear Control	316
4.3.3	Example: Ship-to-Shore Gantry Crane	320
4.4	Saturation Controllers	325
4.4.1	Basics and Stability	325
4.4.2	Design in Multiple Steps	329
4.4.3	Example: Helicopter	331
4.5	Exercises	333
5	Nonlinear Control of Nonlinear Systems	343
5.1	Gain-Scheduling Control	343
5.1.1	Mode of Operation and Design	343
5.1.2	Illustrative Example	349
5.1.3	Example: Solar Power Plant	352
5.2	Input-Output Linearization	356
5.2.1	Basic Concept and Nonlinear Controller Canonical Form	356
5.2.2	Nonlinear Controller and Linear Control Loop	362
5.2.3	Example: Magnetic Bearing	365
5.2.4	Plants with Internal Dynamics	369
5.2.5	Design Procedure	375
5.2.6	Example: Lunar Module	377
5.2.7	Input-Output Linearization of General SISO Systems ..	382
5.2.8	Relative Degree and Internal Dynamics of Linear Systems	386
5.2.9	Control Law for the Linear Case	393
5.2.10	Stability of Internal and Zero Dynamics	396
5.2.11	Input-Output Linearization of MIMO Systems	398
5.2.12	MIMO Control Loops in State-Space Representation ...	403
5.2.13	Example: Combustion Engine	408
5.3	Full-State Linearization	411
5.3.1	Full-State Linearization of SISO Systems	411
5.3.2	Example: Drilling Rig	417
5.3.3	Full-State Linearization of MIMO Systems	423
5.3.4	Flatness of Full-State Linearizable Systems	427
5.3.5	Example: Rocket	429
5.4	Feedforward and Feedback Control of Flat Systems	433
5.4.1	Fundamentals	433
5.4.2	Feedforward Controls Using Fictitious Flat Outputs ...	434
5.4.3	Flatness-Based Feedforward Control of Linear Systems .	438
5.4.4	Example: Propulsion-Based Aircraft Control	441
5.4.5	Flatness-Based Feedback Control of Nonlinear Systems .	446
5.4.6	Example: Pneumatic Motor	451
5.4.7	Flat Inputs and Their Design	455
5.4.8	Flat Inputs of Linear Systems	459

5.4.9	Example: Economic Market Model.....	460
5.5	Control Lyapunov Functions	462
5.5.1	Fundamentals	462
5.5.2	Control Lyapunov Functions for Linear Systems	464
5.5.3	Control Lyapunov Functions for Control-Affine Systems	465
5.5.4	Illustrative Example	467
5.5.5	Example: Power Plant with Grid Feed-In	469
5.6	The Backstepping Method	475
5.6.1	Fundamentals	475
5.6.2	Recursive Scheme for the Controller Design	480
5.6.3	Illustrative Examples	482
5.6.4	Example: Fluid System with Chaotic Behavior	486
5.7	Exercises	490
6	Nonlinear Control of Linear and Nonlinear Systems	503
6.1	Model-Based Predictive Control	503
6.1.1	Basics and Functionality	503
6.1.2	Linear Model Predictive Control without Constraints ..	507
6.1.3	LMPC with Constraints	511
6.1.4	Example: Drainage System	514
6.1.5	Nonlinear Model Predictive Control.....	518
6.1.6	Example: Evaporation Plant	524
6.2	Variable Structure Control with Sliding Mode	528
6.2.1	Basics and Characteristics	528
6.2.2	Design for Linear Plants.....	530
6.2.3	Dynamics in the Sliding Mode	532
6.2.4	Verification of Robustness	533
6.2.5	Example: DC-to-DC Converter	534
6.2.6	Design for Nonlinear Plants.....	540
6.2.7	Example: Optical Switch	542
6.3	Passivity-Based Control	545
6.3.1	Control of Passive Systems Using Static Controllers....	545
6.3.2	Example: Damping of Seismic Building Vibrations....	548
6.3.3	Passivation of Non-Passive Linear Systems.....	556
6.3.4	Passivation of Non-Passive Control-Affine Systems....	561
6.3.5	Passivity-Based Control with IDA	563
6.3.6	Example: Paper Machine	568
6.4	Fuzzy Control.....	572
6.4.1	Introduction	572
6.4.2	Fuzzification	573
6.4.3	Inference	575
6.4.4	Defuzzification	582
6.4.5	Fuzzy Systems and Fuzzy Controllers	583
6.4.6	Example: Distance Control for Automobiles.....	586
6.5	Exercises	591

7 Observers for Nonlinear Systems 601

7.1 Observability of Nonlinear Systems 601

7.1.1 Definition of Observability 601

7.1.2 Observability of Autonomous Systems..... 605

7.1.3 Example: Synchronous Generator..... 608

7.1.4 Observability of General Nonlinear Systems 610

7.1.5 Nonlinear Observability Canonical Form..... 612

7.1.6 Observability of Control-Affine Systems 615

7.2 Canonical Forms and the Canonical Form Observer 618

7.3 Luenberger Observers for Nonlinear Control Loops..... 622

7.4 Observer Design Using Linearization 624

7.4.1 Basics and Design 624

7.4.2 Control Loop with Observer 628

7.4.3 Example: Bioreactor 629

7.5 The Extended Kalman Filter 633

7.5.1 Kalman Filter for Linear Systems 633

7.5.2 The EKF for Nonlinear Systems..... 635

7.5.3 Example: Jet Engine..... 638

7.6 High-Gain Observer 641

7.6.1 Concept and Design 641

7.6.2 High-Gain Observers in General Form..... 647

7.6.3 Example: Chemical Reactor 649

7.6.4 The Case of Control-Affine Systems..... 652

7.7 Exercises 656

8 Solutions to the Exercises 661

Correction to : Fundamentals of Nonlinear Systems..... C1

A Appendix 693

A.1 Proof of the General Circle Criterion..... 693

A.2 Parameters of the Container Crane Control 697

B List of Symbols 699
