1 Gasification process and fundamentals — 1

- 1.1 Gasification fundamentals — 1
 - 1.1.1 Gasification performance parameters — 2
 - 1.1.2 Parameters that influence the gasification performance — 5
 - 1.1.3 Gasification uses — 7
 - 1.1.4 Gasification process — 8
- 1.2 History of gasification — 10
- 1.3 Gasification reactors — 11
 - 1.3.1 Updraft fixed bed (UFB) — 11
 - 1.3.2 Downdraft fixed bed (DFB) — 12
 - 1.3.3 Bubbling fluidized bed (BFB) — 14
 - 1.3.4 Circulating fluidized bed (CFB) — 14
 - 1.3.5 Entrained flow (EF) — 14
- 1.4 Gasification versus other thermochemical technologies — 15
 - 1.4.1 Combustion — 17
 - 1.4.2 Pyrolysis — 20
- 1.5 Future of gasification — 24
- References — 26

2 Experimental setup — 33

- 2.1 Description of facilities and typical experimental conditions — 33
- 2.2 Biomass characterization — 36
 - 2.2.1 Thermogravimetric characterization of biomass properties — 38
- References — 40

3 Numerical modeling formulation — 43

- 3.1 Equilibrium models — 43
 - 3.1.1 Heterogeneous equilibrium — 44
 - 3.1.2 Homogeneous equilibrium — 47
 - 3.1.3 Calculation procedure — 48
- 3.2 Computational fluid dynamics (CFD) — 49
 - 3.2.1 2D Eulerian–Eulerian approach — 49
 - 3.2.2 Expansion to municipal solid waste (MSW) residues — 56
 - 3.2.3 3D Eulerian–Eulerian approach — 58
 - 3.2.4 Gasification optimization through CFD coupled with design of experiments (DoE) — 61
- References — 68

4	Co-gasification and waste-to-energy conversion — 71
4.1	Waste to energy — 71
4.2	Solid waste conversion — 72
4.3	Waste-to-energy thermochemical technologies — 75
4.3.1	Combustion — 75
4.3.2	Pyrolysis — 79
4.3.3	Co-gasification with refuse-derived fuels (RDF) — 81
	References — 87
5	Technoeconomic analysis of a biomass gasification power plant — 93
5.1	Methodology — 93
5.2	Economic model development — 99
5.2.1	Net present value — 100
5.2.2	Internal rate of return — 100
5.2.3	Payback period — 101
5.3	Economic model results and discussion — 101
5.4	Sensitivity analysis — 103
5.4.1	Monte Carlo simulation — 103
5.5	Technoeconomic analysis of biomass gasification for green ammonia production — 105
5.6	Technoeconomic assessment — 106
5.7	Biomass-to-ammonia economic model development — 110
5.7.1	Modified internal rate of return — 111
5.7.2	Discounted payback period — 111
5.8	Biomass-to-ammonia economic model results and discussion — 111
5.9	Monte Carlo sensitivity analysis — 113
	References — 115
6	Ammonia, coal, and biomass co-firing in a pilot-scale fluidized bed reactor — 119
6.1	Experimental conditions — 120
6.1.1	Combustion facility description and experimental conditions — 120
6.2	Ammonia–coal–biomass co-firing mathematical model — 123
6.2.1	Continuous gas phase — 123
6.2.2	Discrete solid phase — 125
6.2.3	Turbulence model — 126
6.2.4	Chemical reaction model — 126
6.3	Results and discussion — 128
6.3.1	Effect of NH_3 co-firing ratio on emission reduction — 128
6.3.2	Coal–biomass– NH_3 co-firing: effect on the emissions reduction — 131

6.4	Final remarks —	132
	References —	134

	Future prospects in gasification —	137
	References —	138

	Index —	141
