

1	Introduction	1
1.1	Challenges and state of the art solutions	2
1.2	Objectives of the thesis	6
1.3	Structure of the thesis	7
2	Mathematical Model	9
2.1	Machine design	9
2.2	Finite element analysis	10
2.3	Magnetic equivalent circuit model	13
2.3.1	Differential MEC network of the stator	16
2.3.2	Approximation of the differential MEC network	20
2.3.3	Validation of the differential MEC network	24
2.3.4	MEC network of the shuttle and the air gap	28
2.3.5	Full MEC network	31
2.4	Magnetic equivalent circuit for multiple shuttles	33
2.5	Stator segment transition	36
2.6	Conclusions	38
3	Model calibration	39
3.1	Calibration of the air gap permeances	39
3.1.1	Ansatz functions for the air gap permeances	41
3.1.2	Problem formulation and calibration results	43
3.2	Calibration for the stator segment transition	47
3.3	Calibration of the coupling permeances	49
3.4	Conclusions	51

4	Optimal control of the PMLSM	53
4.1	Optimal currents	54
4.1.1	Single shuttle operation	60
4.1.2	Dual shuttle operation	63
4.1.3	Stator segment transition	64
4.2	Motion controller	65
4.2.1	Current controller	67
4.2.2	Position controller	72
4.3	Conclusions	74
5	Implementation and measurement results	77
5.1	Test stand and implementation	78
5.2	Single shuttle operation	78
5.3	Dual shuttle operation	88
5.4	Stator segment transition	94
6	Conclusions and future work	101
6.1	Conclusions	101
6.2	Future work	105
A	Lumped approximation of the stator	107
B	Compensation of the inverter characteristic	111
C	Field oriented control design	115
D	Parameter values	117
	Bibliography	121
