

TABLE OF CONTENTS

Remarks to the text of the thesis and associated publications 1

PROBLEM DEFINITION.....2

CHAPTER 1: STATE OF THE ART3

 1.1 Introduction.....3

 1.2 Fracture mechanics of brittle disordered materials3

 1.2.1 Failure of quasi-brittle materials3

 1.2.2 Model for tensile fracture 7

 1.2.3 Fracture process zone - experimental and computational assessment.....8

 1.3 Wedge splitting test9

 1.3.1 Wedge splitting test as applied for refractories 9

 1.3.2 FEM simulation and inverse estimation of wedge splitting test results 11

 1.4 Digital image correlation (DIC).....12

 1.4.1 Digital image correlation technique 12

 1.4.2 Application of the digital image correlation for quasi-brittle materials 15

CHAPTER 2: APPLICATION OF DIGITAL IMAGE CORRELATION ON THE WEDGE SPLITTING TEST 16

 2.1 Introduction..... 16

 2.2 Materials and investigation method..... 16

 2.3 Uncertainty assessment of digital image correlation 19

 2.3.1 Influence of the speckle pattern on the DIC uncertainty 19

 2.3.2 Influence of the implementation on the DIC uncertainty 21

 2.4 Mechanical properties of refractories 25

 2.5 Investigation of fracture process zone using digital image correlation 26

 2.5.1 Determination of fracture process zone..... 26

 2.5.2 Development of fracture process zone 29

 2.6 Multi-cycle wedge splitting test using digital image correlation..... 33

 2.6.1 Results of cyclic wedge splitting test 33

 2.6.2 Investigation of crack propagation resistance 36

 2.7 Conclusion 42

CHAPTER 3: NUMERICAL SIMULATION AND INVERSE IDENTIFICATION.....44

3.1 Introduction.....44

3.2 Numerical investigation of finite element models44

3.2.1 Grain/matrix FE model.....44

3.2.2 Seam FE model.....46

3.2.3 Heterogeneous continuum FE model48

3.3 Simulation results51

3.3.1 WST simulation and inverse identification results.....51

3.3.2 Analysis of FEM simulated fracture process zone55

3.4 Conclusion57

General conclusion59
