

1	Introduction	1
1.1	The roughing process	2
1.2	Problem description and objectives of this work	4
1.3	State of the art and contributions of this work	6
1.4	Structure of this thesis	8
2	Mathematical model	9
2.1	Derivation of the force-input model	10
2.1.1	Dynamic model of the lateral plate motion	10
2.1.2	Mathematical model of the plate shape	14
2.2	Analysis of the force-input model	15
2.3	Derivation of the position-input model	16
2.3.1	Reduced Young’s modulus in the roll gap	16
2.3.2	Model assembly	18
2.4	Analysis of the position-input model	19
2.4.1	Lateral positions $w(-l_e^-)$ and $w(l_e^+)$ as model inputs	19
2.4.2	Roll gap tilt ΔH as additional control input	20
2.5	Computation of the outgoing plate centerline	21
2.6	Specialization of the model for the considered industrial rolling mill	23
2.7	Analysis of the specialized model	24
2.7.1	Lateral position u^- as model input	24
2.7.2	Initial lateral plate position W_0 in the roll gap	27
2.7.3	Analysis of the composition of the outgoing plate centerline	27
2.8	Asymmetric mill stretch	29
2.9	The dog-bone effect	30
2.10	Summary	33

3	Model parametrization and validation	35
3.1	Measurement system at the industrial plant	36
3.2	Identification of uncertain parameters	38
3.2.1	Friction forces during lateral adjustment of the edger rolls	39
3.2.2	Initial position W_0 of the plate in the roll gap	40
3.2.3	Parameter estimation	41
3.3	Validation of the lateral plate motion	44
3.4	Validation of the shape of the plate centerline	45
3.5	Summary	46
4	Control design	49
4.1	Optimal control of the force-input model	50
4.1.1	Admittance control (inner loop)	51
4.1.2	LQR (outer loop)	52
4.1.3	Simulation results	54
4.1.4	Results of the admittance control	54
4.1.5	Results of the LQR for the plate motion and camber . . .	55
4.2	Optimal control of the position-input model	57
4.2.1	Optimal feedforward control	57
4.2.2	Feedback control	61
4.2.3	Simulation results	62
4.3	Optimal multi-pass control of the lateral plate motion and shape .	67
4.3.1	Optimal multi-pass control	68
4.3.2	Simulation results	72
4.4	Summary	73
5	Results	77
5.1	Implementation at the industrial plant	77
5.2	Performance of the proposed control concept at the industrial plant	78
5.3	Summary	80
6	Conclusions	83
6.1	Summary	83
6.2	Outlook	85
A	Appendix	87
A.1	Coordinate transformation of plate centerline	87
A.2	Recurring adaptation of the uncertain parameters	88
A.3	Constraints for optimization-based feedforward control	89
A.4	Time-varying formulation of the optimal feedforward control . . .	91
A.5	Second derivative by matrix multiplication	92
	Bibliography	93
