

Contents

1	The Long Shadow of Early Trauma—Look!	1
1.1	Mental Illness	1
1.2	Pain in Childhood—and What Comes Later?	2
1.3	How can I Sleep While My Bed is Burning?	3
1.4	Teeth Suffer	4
1.5	Target Variable: Weight	4
1.6	Cardiovascular Diseases	6
1.7	Chronic Lung Problems	7
1.8	And then Chronic Inflammation	8
1.9	To the Point	9
	References	9
2	What is a Child’s Psychological Trauma?	13
2.1	Origins and Important Protagonists	13
2.1.1	Urie Bronfenbrenner, a Psychologist (1917–2005)	13
2.1.2	John Bowlby, a Child Psychiatrist (1907–1990)	14
2.1.3	Michael Rutter, Psychiatrist (1933–2021)	15
2.1.4	David Barker, Social Medicine and Epidemiologist (1938–2013)	16
2.1.5	Vincent J. Felitti, an Internist (Born 1938)	16
2.1.6	Robert J. Plomin, a Psychologist (Born 1948)	18
2.1.7	W. Thomas Boyce (Born 1943), a Pediatrician, and Jay Belsky (Born 1952), a Psychologist	18
2.1.8	Summary	19
2.2	The Different Types of Early Traumatic Experiences	19
2.3	Time Windows for Bad Childhood Experiences	22
2.4	Frequency of Bad Childhood Experiences	24
2.5	Compensating Positive Factors Against Trauma Experiences	26
2.5.1	Resilience	26
2.5.2	Unfavorable Versus Favorable Childhood Experiences	29

2.5.3	Orchid or Dandelion	32
2.5.4	Favorable or Unfavorable Genetic Predisposition	33
2.5.5	Favorable or Unfavorable Epigenetic Changes	41
2.6	Child Disadvantages and Stealing Effects	44
2.7	Transmission of Behavior from Generation to Generation	47
2.7.1	Genetic Transmission	47
2.7.2	Epigenetic Transmission	48
2.7.3	Transmission—without Genetic and Epigenetic Explanations	51
2.8	An Evolutionary Medicine Perspective	52
2.8.1	Historical Development	52
2.8.2	Childhood Trauma and Evolutionary Medicine—the Results	55
2.8.3	Gender Differences—an Evolutionary Medicine Perspective	57
2.9	To the Point	58
	References	59
3	Consequences of Early Traumatic Experiences	71
3.1	Many Places are Affected	71
3.2	The Brain Probably Suffers the Most	72
3.2.1	Alcohol, Nicotine and Drugs	72
3.2.2	Depression	75
3.2.3	Anxiety Disorders	79
3.2.4	Personality and Childhood Trauma	81
3.2.5	More Psycho- and Neuropathology	82
3.2.6	More Sleep Disorders as a Result of Previous Trauma	84
3.2.7	More Pain after Childhood Adversities	86
3.2.8	Summary	89
3.3	The Body Periphery Suffers as Well	90
3.3.1	High Body Weight	91
3.3.2	Heart Attack and Co.	96
3.3.3	Chronic Lung Diseases	98
3.3.4	The Stomach Aches and the Stool Consistency Bothers	100
3.3.5	And When We Get Old?.	101
3.4	And Finally the Immune System is Activated	108
3.4.1	Early Trauma and Autoimmunity	109
3.5	To the Point	111
	References	112
4	Chronic Immune System Activation	135
4.1	Egoistic Brain and Egoistic Immune System are Fourfold Interconnected	135
4.1.1	Areas in the Brain that Stimulate Direct and Indirect Connectors	137

4.2	Direct Connectors Chronically Activate the Immune System (No. 1)	140
4.2.1	The Sympathetic Nervous System	141
4.2.2	The Parasympathetic nervous system	153
4.2.3	The HPA Axis	154
4.2.4	Disruption of the Circadian Rhythm	164
4.2.5	Tone of the Pain Pathways	166
4.2.6	Tone of the Sex Hormone Axis	169
4.3	Indirect Connectors Activate the Immune System Chronically (No. 2)	174
4.3.1	Adipose Tissue is Pro-inflammatory	174
4.3.2	The Insulin from the Pancreas Promotes Inflammation.	177
4.3.3	Reduced Physical Activity—Anti-inflammatory Factors are Missing.	179
4.3.4	Microbiome and Inflammation.	180
4.3.5	The Permeability of the Gut is Pro-inflammatory	182
4.3.6	The Skin Itches Chronically and is Inflamed.	183
4.4	Environmental Factors Chronically Activate the Immune System (No. 3)	184
4.4.1	Where There’s Smoke, There’s Fire.	184
4.4.2	Where Fine Particles are Flying, It Gets Uncomfortable.	187
4.4.3	Asthma	189
4.4.4	Infections are Extra-corporeal Connectors	192
4.4.5	Risk Behavior.	195
4.5	Gene Mutations as Pleiotropic Connectors (No. 4)	196
4.5.1	The Search in the Gene Databases Leads to Pleiotropic Connectors	198
4.6	Summary	201
4.7	To the Point	203
	References.	204
5	Energy, Early Traumatic Experiences and Chronic Immune System Activation.	233
5.1	Brain and Immune System Define Energy Expenditure	234
