1 Introduction 1

1.1 Background and motivation 1

1.2 State of the art in the research field 2

1.2.1 Introduction of hydrothermal processes and the status quo of hydrothermal carbonization and liquefaction2

1.2.2 Fate of phosphate after hydrothermal carbonization and liquefaction 7

1.2.3 Strategies for phosphate recovery following hydrothermal carbonization and liquefaction 8

1.2.4 Potential of recycled phosphate for reuse in agriculture 11

1.3 Summary of the knowledge gaps 12

1.4 Research questions 14

1.5 Thesis structure 16

1.6 References 17

2 Experimental and thermodynamic studies of phosphate behavior during the hydrothermal carbonization of sewage sludge 25

2.1 Abstract 25

2.2 Graphical abstract 26

2.3	Highlights	26
2.4	Introduction	27
2.5	Materials and methods.....	28
2.5.1	Materials	28
2.5.1.1	Digested sewage sludge	28
2.5.1.2	Hydrochar and process water from the hydrothermal carbonization of digested sewage sludge	29
2.5.2	Methods	29
2.5.2.1	Characterization of the digested sewage sludge, hydrochar, and process water.....	29
2.5.2.2	Thermochemical equilibrium calculation.....	30
2.6	Results and discussion	31
2.6.1	Phosphate in digested sewage sludge.....	31
2.6.2	Fate of phosphate	32
2.6.2.1	Distribution of the elements P, Al, Ca, and Fe between hydrochar and process water	33
2.6.2.2	Distribution of the elements P, Al, Ca, and Fe within different species in hydrochar	35
2.6.2.3	Equilibrium composition	37
2.6.3	Possible transformation pathways of phosphate during hydrothermal carbonization..	40
2.7	Conclusion	42
2.8	Declaration of competing interest	42
2.9	Acknowledgment	42
2.10	References	43
3	Feedstock-dependent phosphate recovery in a pilot-scale hydrothermal liquefaction bio-crude production	47
3.1	Abstract.....	47
3.2	Introduction.....	48
3.3	Materials and methods.....	50
3.3.1	Hydrothermal liquefaction and its products.....	50
3.3.2	Phosphate recovery	52

3.3.2.1	Solubility experiments	52
3.3.2.2	Struvite production.....	52
3.3.3	Analyses.....	53
3.3.3.1	Solid and oil phase.....	53
3.3.3.2	Liquid phase	54
3.4	Results and discussion	54
3.4.1	Nutrient distribution in feedstocks and between HTL products	54
3.4.2	Strategy of phosphate recovery	58
3.4.3	Phosphate recovery	60
3.4.3.1	Release of phosphate from the HTL solid phase	60
3.4.3.2	Phosphate precipitation in the form of struvite.....	63
3.4.3.3	Overall consideration of process and mass flow of macronutrients	66
3.5	Conclusions.....	68
3.6	Author contributions	69
3.7	Funding.....	69
3.8	Acknowledgments.....	69
3.9	Conflicts of interest	69
3.10	References	69
4	Valorization of byproducts from hydrothermal liquefaction of sewage sludge and manure: the development of a struvite-producing unit for nutrient recovery	75
4.1	Abstract.....	75
4.2	Graphical abstract	76
4.3	Introduction.....	77
4.4	Materials and methods.....	79
4.4.1	HTL process water and leachate from HTL solids as well as their respective model solutions.....	79
4.4.2	Experimental procedure	80
4.4.2.1	Precipitation experiments on the laboratory scale.....	80
4.4.2.2	Precipitation experiments in the air-agitated system	82
4.4.3	Characterization of the precipitation process and its products	83
4.4.3.1	Analytics.....	83

4.4.3.2	Evaluation of the precipitation process	84
4.4.4	Estimation of experimental error.....	85
4.5	Results and discussion.....	86
4.5.1	Effect of inlet-mixed solution composition on HTL-based struvite precipitation....	86
4.5.1.1	Change the molar ratio of struvite-forming ions in the inlet-mixed solution....	89
4.5.1.2	Addition of complexing agent to the inlet-mixed solution to control the content of Al and Fe metal ions.....	90
4.5.1.3	pH setting and reaction time.....	91
4.5.1.4	Quality of the precipitate.....	91
4.5.2	Application of an air-agitated system for HTL-based struvite precipitation	95
4.5.2.1	Selection of favorable operating parameters for the evaluation of the air-agitated system	95
4.5.2.2	Effect of an air-agitated system on HTL-based struvite precipitation: a comparison of the precipitation process on the laboratory scale and in the air-agitated system	96
4.5.2.3	Insight into the effect of Al, Fe, and Ca ions and organics on HTL-based struvite precipitation in the air-agitated system: a comparison of the precipitation process using inlet-mixed solutions of different complexities.....	98
4.5.2.4	Integration of the struvite-producing unit in the HTL bio-crude oil production: challenges and prospects	102
4.6	Conclusions.....	103
4.7	Notes.....	104
4.8	Acknowledgments.....	104
4.9	References	104
5	Conclusion.....	110
6	Outlook.....	113
6.1	On the fate of the phosphate	113
6.2	On phosphate recovery for its reuse in agriculture.....	113
6.3	References	116
Curriculum vitae of Ekaterina Ovsyannikova		117

Total list of publications119

Appendix 1. Experimental and thermodynamic studies of phosphate behavior during the hydrothermal carbonization of sewage sludge 120

Appendix 2. Feedstock-dependent phosphate recovery in a pilot-scale hydrothermal liquefaction bio-crude production 125

Appendix 3. Valorization of byproducts from hydrothermal liquefaction of sewage sludge and manure: the development of a struvite-producing unit for nutrient recovery 129
