

# Contents

<b>Acronyms .....</b>	xv
<b>Introduction .....</b>	1
<b>1 Speech Quality in Telecommunications .....</b>	5
1.1 Speech .....	5
1.1.1 Speech production .....	5
1.1.2 Auditory system .....	7
1.1.3 Speech perception .....	9
1.2 Speech quality .....	12
1.2.1 Definition of the integral speech quality .....	12
1.2.2 Quality elements and quality features .....	15
1.2.3 Quality of Service (QoS) .....	16
1.3 Transmission systems .....	18
1.3.1 Telephone scenario .....	19
1.3.2 Telephony networks .....	19
1.3.3 User interfaces .....	21
1.3.4 Speech codecs .....	22
1.3.5 Speech enhancement .....	26
1.4 Perceptual quality space .....	27
1.4.1 Definition .....	27
1.4.2 Example studies .....	28
1.5 Summary and conclusions .....	34
<b>2 Speech Quality Measurement Methods .....</b>	37
2.1 Definitions .....	37
2.2 Auditory methods .....	40
2.2.1 Test subjects .....	42
2.2.2 Speech material .....	44
2.2.3 Utilitarian methods .....	44
2.2.4 Analytical methods .....	49

2.2.5	Relativity of subjects' judgments . . . . .	52
2.2.6	Reference conditions and normalization procedures . . . . .	56
2.3	Instrumental methods . . . . .	58
2.3.1	Parameter-based models . . . . .	60
2.3.2	Signal-based models . . . . .	64
2.3.3	Packet-layer models . . . . .	84
2.4	Summary and Conclusion . . . . .	84
<b>3</b>	<b>Optimization and Application of Integral Quality Estimation Models</b> . . . . .	87
3.1	Optimization of an intrusive quality model, the WB-PESQ . . . . .	88
3.1.1	WB-PESQ analysis . . . . .	88
3.1.2	The Modified WB-PESQ . . . . .	99
3.2	Application of WideBand intrusive quality models . . . . .	104
3.2.1	WideBand version of the E-model . . . . .	105
3.2.2	Methodology for the derivation of $I_{e,WB}$ and $B_{pl,WB}$ . . . . .	110
3.2.3	Derivation from WideBand intrusive models . . . . .	114
3.3	Summary and Conclusion . . . . .	130
<b>4</b>	<b>Diagnostic Instrumental Speech Quality Model</b> . . . . .	133
4.1	Scope . . . . .	134
4.2	Overview of the DIAL model . . . . .	135
4.3	Pre-processing . . . . .	137
4.3.1	Active Speech Level (ASL) . . . . .	137
4.3.2	Time-alignment . . . . .	138
4.3.3	Modeling of receiving terminals . . . . .	149
4.4	Core model . . . . .	150
4.4.1	Perceptual transformation . . . . .	151
4.4.2	Partial compensation of the transmission system . . . . .	153
4.4.3	Calculation of the loudness densities . . . . .	157
4.4.4	Short-term degradation measure . . . . .	159
4.4.5	Integration of the degradation over the time scale . . . . .	162
4.4.6	Computation of the core model quality score . . . . .	163
4.5	Dimension estimators . . . . .	164
4.5.1	Coloration . . . . .	164
4.5.2	Loudness . . . . .	168
4.5.3	Discontinuity . . . . .	172
4.5.4	Noisiness . . . . .	178
4.6	Judgment model . . . . .	182
4.6.1	Linear regression analysis . . . . .	182
4.6.2	$k$ -Nearest Neighbors . . . . .	183
4.7	Summary and Conclusion . . . . .	186

<b>Contents</b>	xiii
<b>5 Evaluation of DIAL . . . . .</b>	187
5.1 Experimental set-up . . . . .	187
5.1.1 Reference instrumental measures . . . . .	187
5.1.2 Databases . . . . .	190
5.1.3 Statistical measures . . . . .	192
5.2 Performance results . . . . .	197
5.2.1 Integral quality . . . . .	197
5.2.2 Perceptual dimensions . . . . .	204
5.3 Summary and Conclusion . . . . .	209
<b>6 Conclusions and Outlooks . . . . .</b>	213
6.1 Conclusions . . . . .	213
6.2 Outlook . . . . .	216
<b>A Modulated Noise Reference Unit (MNRU) . . . . .</b>	219
<b>B Databases test-plan . . . . .</b>	221
B.1 Narrow-Band databases . . . . .	221
B.2 WideBand and Super-WideBand databases . . . . .	224
B.3 Perceptual dimension databases . . . . .	228
<b>References . . . . .</b>	229
