

Vladimir Müller

# **Spectral Theory of Linear Operators**

and Spectral Systems in  
Banach Algebras

Second edition

Birkhäuser  
Basel · Boston · Berlin

# Contents

<b>Preface</b> . . . . .	vii
<b>Preface to the Second Edition</b> . . . . .	ix
<b>I Banach Algebras</b>	
1 Basic Concepts . . . . .	1
2 Commutative Banach algebras . . . . .	18
3 Approximate point spectrum in commutative Banach algebras . . .	26
4 Permanently singular elements and removability of spectrum . . .	34
5 Non-removable ideals . . . . .	42
6 Axiomatic theory of spectrum . . . . .	51
7 Spectral systems . . . . .	58
8 Basic spectral systems in Banach algebras . . . . .	68
Comments on Chapter I . . . . .	72
<b>II Operators</b>	
9 Spectrum of operators . . . . .	85
10 Operators with closed range . . . . .	97
11 Factorization of vector-valued functions . . . . .	106
12 Kato operators . . . . .	117
13 General inverses and Saphar operators . . . . .	130
14 Local spectrum . . . . .	135
Comments on Chapter II . . . . .	143
<b>III Essential Spectrum</b>	
15 Compact operators . . . . .	149
16 Fredholm and semi-Fredholm operators . . . . .	155
17 Construction of Sadosvskii/Buoni, Harte, Wickstead . . . . .	164
18 Perturbation properties of Fredholm and semi-Fredholm operators . . . . .	169
19 Essential spectra . . . . .	172
20 Ascent, descent and Browder operators . . . . .	178

21	Essentially Kato operators . . . . .	187
22	Classes of operators defined by means of kernels and ranges . . . .	197
23	Semiregularities and miscellaneous spectra . . . . .	211
24	Measures of non-compactness and other operator quantities . . . .	220
	Comments on Chapter III . . . . .	228
<b>IV Taylor Spectrum</b>		
25	Basic properties . . . . .	237
26	Split spectrum . . . . .	245
27	Some non-linear results . . . . .	252
28	Taylor functional calculus for the split spectrum . . . . .	260
29	Local spectrum for $n$ -tuples of operators . . . . .	266
30	Taylor functional calculus . . . . .	271
31	Taylor functional calculus in Banach algebras . . . . .	283
32	$k$ -regular functions . . . . .	285
33	Stability of index of complexes . . . . .	293
34	Essential Taylor spectrum . . . . .	299
	Comments on Chapter IV . . . . .	305
<b>V Orbits and Capacity</b>		
35	Joint spectral radius . . . . .	311
36	Capacity . . . . .	321
37	Invariant subset problem and large orbits . . . . .	327
38	Hypercyclic vectors . . . . .	341
39	Weak orbits . . . . .	348
40	Scott Brown technique . . . . .	359
41	Kaplansky's type theorems . . . . .	375
42	Polynomial orbits and local capacity . . . . .	378
	Comments on Chapter V . . . . .	387
	<b>Appendix</b> . . . . .	393
	A.1 Banach spaces . . . . .	393
	A.2 Analytic vector-valued functions . . . . .	398
	A.3 $C^\infty$ -functions . . . . .	401
	A.4 Semicontinuous set-valued functions . . . . .	403
	A.5 Some geometric properties of Banach spaces . . . . .	404
	A.6 Basic properties of $H^\infty$ . . . . .	405
	<b>Bibliography</b> . . . . .	407
	<b>Index</b> . . . . .	429
	<b>List of Symbols</b> . . . . .	437
