

Contents

Preface to the Fifth Edition — XI

1 Introduction — 1

- 1.1 Definition of geodesy — 1
- 1.2 The objective of geodesy — 2
- 1.3 Historical development of geodesy — 4
 - 1.3.1 The spherical Earth model — 4
 - 1.3.2 The ellipsoidal Earth model — 7
 - 1.3.3 The geoid, arc measurements, and national geodetic surveys — 10
 - 1.3.4 Three-dimensional geodesy — 12
 - 1.3.5 Four-dimensional geodesy — 13
- 1.4 Organization of geodesy, international collaboration — 15

2 Reference Systems and Reference Frames — 18

- 2.1 Basic units and constants — 19
- 2.2 Time systems — 21
 - 2.2.1 Atomic time, dynamical time systems — 22
 - 2.2.2 Sidereal and Universal Time — 23
- 2.3 Reference coordinate systems: fundamentals — 27
 - 2.3.1 Celestial Reference System — 27
 - 2.3.2 Precession, nutation — 30
 - 2.3.3 Terrestrial reference system — 32
 - 2.3.4 Polar motion, Earth rotation — 33
- 2.4 International reference systems and reference frames — 38
 - 2.4.1 International Celestial Reference System and Frame — 39
 - 2.4.2 International Terrestrial Reference System and Frame — 43
 - 2.4.3 Transformation between terrestrial and celestial reference systems, Earth orientation parameters — 49
 - 2.4.4 International Earth Rotation and Reference Systems Service — 52
- 2.5 Local level systems — 53
- 2.6 Geodetic datum — 59

3 The Gravity Field of the Earth — 65

- 3.1 Fundamentals of gravity field theory — 65
 - 3.1.1 Gravitation, gravitational potential — 65
 - 3.1.2 Gravitation of a spherically symmetric Earth — 68
 - 3.1.3 Properties of the gravitational potential — 71
 - 3.1.4 Centrifugal acceleration, centrifugal potential — 74
 - 3.1.5 Gravity acceleration, gravity potential — 76
- 3.2 Geometry of the gravity field — 78

- 3.2.1 Level surfaces and plumb lines — **78**
- 3.2.2 Local gravity field representation — **80**
- 3.2.3 Natural coordinates — **84**
- 3.3 Spherical harmonic expansion of the gravitational potential — **86**
- 3.3.1 Expansion of the reciprocal distance — **86**
- 3.3.2 Expansion of the gravitational potential — **90**
- 3.3.3 Geometrical interpretation of the surface spherical harmonics — **93**
- 3.3.4 Physical interpretation of the spherical harmonic coefficients — **96**
- 3.3.5 Degree variances — **98**
- 3.4 The geoid — **99**
- 3.4.1 Definition of the geoid — **99**
- 3.4.2 Mean sea level and mean dynamic topography — **101**
- 3.5 Heights — **105**
- 3.5.1 Geopotential number — **106**
- 3.5.2 Dynamic heights — **107**
- 3.5.3 Orthometric heights — **108**
- 3.5.4 Normal heights — **109**
- 3.5.5 Normal-orthometric heights — **110**
- 3.6 Alternatives for height determination — **111**
- 3.6.1 Trigonometric heights — **111**
- 3.6.2 Heights from GNSS — **113**
- 3.6.3 Height determination by high-precision clocks — **115**
- 3.7 Global unification of height systems — **117**
- 3.8 Temporal gravity variations — **119**
- 3.8.1 Gravitational constant, Earth rotation — **119**
- 3.8.2 Tidal acceleration, tidal potential — **120**
- 3.8.3 Earth tides and tidal loading — **125**
- 3.8.4 Non-tidal temporal gravity variations — **132**

4 The Geodetic Earth Model — 134

- 4.1 The rotational ellipsoid — **134**
- 4.1.1 Parameters and coordinate systems — **134**
- 4.1.2 Curvature — **138**
- 4.1.3 Spatial geodetic coordinates — **141**
- 4.2 The normal gravity field — **144**
- 4.2.1 The level ellipsoid, level spheroids — **144**
- 4.2.2 The normal gravity field of the level ellipsoid — **145**
- 4.2.3 Geometry of the normal gravity field — **151**
- 4.3 Geodetic reference systems, optimum Earth model — **154**

5	Measurement Methods — 158
5.1	Atmospheric refraction — 158
5.1.1	Fundamentals — 159
5.1.2	Tropospheric refraction — 163
5.1.3	Ionospheric refraction — 167
5.2	Satellite observations — 170
5.2.1	Observation equations for satellite and terrestrial measurements — 170
5.2.2	Undisturbed satellite motion — 178
5.2.3	Perturbed satellite motion — 180
5.2.4	Artificial Earth satellites — 183
5.2.5	Direction, range, and range-rate (Doppler, DORIS) measurements — 186
5.2.6	Global navigation satellite systems (GPS, GLONASS, Galileo, and others) — 189
5.2.7	Laser distance measurements — 204
5.2.8	Satellite altimetry — 208
5.2.9	Satellite gravity missions — 212
5.3	Geodetic astronomy — 224
5.3.1	Optical observation instruments — 224
5.3.2	Astronomic positioning and azimuth determination — 226
5.3.3	Reductions — 228
5.3.4	Very Long Baseline Interferometry — 230
5.4	Gravimetry — 235
5.4.1	Absolute gravity measurements — 236
5.4.2	Quantum gravimetry — 245
5.4.3	Relative gravity measurements — 247
5.4.4	Gravity reference systems and gravity standard — 254
5.4.5	Gravity measurements on moving platforms — 256
5.4.6	Gravity gradiometry — 263
5.4.7	Continuous gravity measurements — 265
5.5	Terrestrial geodetic measurements — 269
5.5.1	Horizontal and vertical angle measurements — 270
5.5.2	Distance measurements, total stations — 272
5.5.3	Inertial surveying, underwater acoustic positioning — 275
5.5.4	Leveling — 278
5.5.5	Tilt and strain measurements — 280
5.5.6	Laser gyroscopes — 282
6	Methods of Gravity Field Determination — 285
6.1	Residual gravity field — 285
6.1.1	Disturbing potential, height anomaly, geoid height — 285
6.1.2	Gravity disturbance, gravity anomaly, deflection of the vertical — 288
6.1.3	The geodetic boundary-value problem — 293

6.2	Spherical harmonic expansion of derived quantities —	296
6.3	Statistical description of the gravity field, interpolation —	298
6.4	Fundamentals of gravity field modeling —	304
6.4.1	Gravitation of topography, digital elevation models —	304
6.4.2	Gravity reductions to the geoid —	307
6.4.3	Orientation and scale of gravity field models —	313
6.5	Local and regional gravity field modeling —	316
6.5.1	Astrogeodetic geoid and quasigeoid determination —	316
6.5.2	Gravimetric geoid heights and deflections of the vertical: integral formulas —	321
6.5.3	Gravimetric height anomalies and surface deflections of the vertical —	329
6.5.4	Least-squares collocation —	332
6.5.5	Alternative regional gravity modeling methods —	337
6.6	Global gravity field modeling —	338
6.6.1	Global gravity field modeling methods —	338
6.6.2	“Satellite-only” gravity field models —	344
6.6.3	Combined (high-resolution) gravity field models —	346
6.6.4	Topographic gravity field models —	351
7	Geodetic and Gravimetric Networks —	353
7.1	Horizontal control networks —	354
7.2	Vertical control networks —	361
7.3	Three-dimensional networks —	366
7.4	Gravity networks —	375
8	Structure and Dynamics of the Earth —	378
8.1	The geophysical Earth model —	378
8.2	The upper layers of the Earth —	382
8.2.1	Structure of the Earth’s crust and upper mantle —	382
8.2.2	Isostasy —	384
8.2.3	Plate tectonics —	388
8.2.4	Interpretation of the gravity field —	390
8.3	Geodesy and recent geodynamics —	397
8.3.1	Geophysical processes and effects on geodetic products —	397
8.3.2	Changes in Earth rotation —	401
8.3.3	Sea-level variations —	404
8.3.4	Crustal deformation —	409
8.3.5	Temporal gravity field variations caused by geodynamic processes —	419

9	Geodesy: Challenges and Future Perspectives — 435
9.1	Challenges and goals — 435
9.2	Scientific challenges and future perspectives — 436
9.2.1	Technological development of observing systems — 437
9.2.2	Methodology, analysis, and modeling — 439
9.2.3	Data products and applications — 442
9.3	Conclusions and outlook — 445

References — 447

Index — 495
