Numerical Methods for Solving Inverse Problems of Mathematical Physics

Walter de Gruyter · Berlin · New York

Contents

Preface v

Main definitions and notations vii

1 Inverse mathematical physics problems 1
- 1.1 Boundary value problems . . . 1
  - 1.1.1 Stationary mathematical physics problems . . . 1
  - 1.1.2 Nonstationary mathematical physics problems . . . 2
- 1.2 Well-posed problems for partial differential equations . . . 4
  - 1.2.1 The notion of well-posedness . . . 4
  - 1.2.2 Boundary value problem for the parabolic equation . . . 4
  - 1.2.3 Boundary value problem for the elliptic equation . . . 8
- 1.3 Ill-posed problems . . . 9
  - 1.3.1 Example of an ill-posed problem . . . 10
  - 1.3.2 The notion of conditionally well-posed problems . . . 11
  - 1.3.3 Condition for well-posedness of the inverted-time problem . . . 11
- 1.4 Classification of inverse mathematical physics problems . . . 13
  - 1.4.1 Direct and inverse problems . . . 13
  - 1.4.2 Coefficient inverse problems . . . 14
  - 1.4.3 Boundary value inverse problems . . . 15
  - 1.4.4 Evolutionary inverse problems . . . 16
- 1.5 Exercises . . . 16

2 Boundary value problems for ordinary differential equations 19
- 2.1 Finite-difference problem . . . 19
  - 2.1.1 Model differential problem . . . 19
  - 2.1.2 Difference scheme . . . 20
  - 2.1.3 Finite element method schemes . . . 23
  - 2.1.4 Balance method . . . 25
- 2.2 Convergence of difference schemes . . . 26
  - 2.2.1 Difference identities . . . 27
  - 2.2.2 Properties of the operator A . . . 28
  - 2.2.3 Accuracy of difference schemes . . . 30
- 2.3 Solution of the difference problem . . . 31
  - 2.3.1 The sweep method . . . 32
  - 2.3.2 Correctness of the sweep algorithm . . . 33
  - 2.3.3 The Gauss method . . . 34
- 2.4 Program realization and computational examples . . . 35
  - 2.4.1 Problem statement . . . 35

2.4.2 Difference schemes 37
2.4.3 Program 39
2.4.4 Computational experiments 43
2.5 Exercises 45

3 Boundary value problems for elliptic equations **49**
3.1 The difference elliptic problem 49
3.1.1 Boundary value problems 49
3.1.2 Difference problem 50
3.1.3 Problems in irregular domains 52
3.2 Approximate-solution inaccuracy 54
3.2.1 Elliptic difference operators 54
3.2.2 Convergence of difference solution 56
3.2.3 Maximum principle 57
3.3 Iteration solution methods for difference problems 59
3.3.1 Direct solution methods for difference problems 59
3.3.2 Iteration methods 60
3.3.3 Examples of simplest iteration methods 62
3.3.4 Variation-type iteration methods 64
3.3.5 Iteration methods with diagonal reconditioner 66
3.3.6 Alternate-triangular iteration methods 67
3.4 Program realization and numerical examples 70
3.4.1 Statement of the problem and the difference scheme 70
3.4.2 A subroutine for solving difference equations 71
3.4.3 Program 79
3.4.4 Computational experiments 83
3.5 Exercises 85

4 Boundary value problems for parabolic equations **90**
4.1 Difference schemes 90
4.1.1 Boundary value problems 90
4.1.2 Approximation over space 92
4.1.3 Approximation over time 93
4.2 Stability of two-layer difference schemes 95
4.2.1 Basic notions 95
4.2.2 Stability with respect to initial data 97
4.2.3 Stability with respect to right-hand side 100
4.3 Three-layer operator-difference schemes 102
4.3.1 Stability with respect to initial data 102
4.3.2 Passage to an equivalent two-layer scheme 104
4.3.3 ρ-stability of three-layer schemes 106
4.3.4 Estimates in simpler norms 108
4.3.5 Stability with respect to right-hand side 110

4.4 Consideration of difference schemes for a model problem 110
4.4.1 Stability condition for a two-layer scheme 111
4.4.2 Convergence of difference schemes 112
4.4.3 Stability of weighted three-layer schemes 113
4.5 Program realization and computation examples 114
4.5.1 Problem statement 114
4.5.2 Linearized difference schemes 115
4.5.3 Program 118
4.5.4 Computational experiments 121
4.6 Exercises 124

5 Solution methods for ill-posed problems **127**
5.1 Tikhonov regularization method 127
5.1.1 Problem statement 127
5.1.2 Variational method 128
5.1.3 Convergence of the regularization method 129
5.2 The rate of convergence in the regularization method 131
5.2.1 Euler equation for the smoothing functional 131
5.2.2 Classes of a priori constraints imposed on the solution 132
5.2.3 Estimates of the rate of convergence 133
5.3 Choice of regularization parameter 134
5.3.1 The choice in the class of a priori constraints on the solution . 135
5.3.2 Discrepancy method 136
5.3.3 Other methods for choosing the regularization parameter . . . 137
5.4 Iterative solution methods for ill-posed problems 138
5.4.1 Specific features in the application of iteration methods 138
5.4.2 Iterative solution of ill-posed problems 139
5.4.3 Estimate of the convergence rate 141
5.4.4 Generalizations 143
5.5 Program implementation and computational experiments 144
5.5.1 Continuation of a potential 144
5.5.2 Integral equation 146
5.5.3 Computational realization 147
5.5.4 Program 148
5.5.5 Computational experiments 152
5.6 Exercises 154

6 Right-hand side identification **157**
6.1 Right-hand side reconstruction from known solution: stationary problems 157
6.1.1 Problem statement 157
6.1.2 Difference algorithms 158
6.1.3 Tikhonov regularization 161

6.1.4 Other algorithms . . . 163
6.1.5 Computational and program realization . . . 164
6.1.6 Examples . . . 172
6.2 Right-hand side identification in the case of parabolic equation . . . 175
6.2.1 Model problem . . . 175
6.2.2 Global regularization . . . 176
6.2.3 Local regularization . . . 178
6.2.4 Iterative solution of the identification problem . . . 180
6.2.5 Computational experiments . . . 189
6.3 Reconstruction of the time-dependent right-hand side . . . 191
6.3.1 Inverse problem . . . 192
6.3.2 Boundary value problem for the loaded equation . . . 192
6.3.3 Difference scheme . . . 194
6.3.4 Non-local difference problem and program realization . . . 194
6.3.5 Computational experiments . . . 199
6.4 Identification of time-independent right-hand side: parabolic equations 201
6.4.1 Statement of the problem . . . 201
6.4.2 Estimate of stability . . . 202
6.4.3 Difference problem . . . 204
6.4.4 Solution of the difference problem . . . 207
6.4.5 Computational experiments . . . 215
6.5 Right-hand side reconstruction from boundary data: elliptic equations 218
6.5.1 Statement of the inverse problem . . . 218
6.5.2 Uniqueness of the inverse-problem solution . . . 219
6.5.3 Difference problem . . . 220
6.5.4 Solution of the difference problem . . . 224
6.5.5 Program . . . 226
6.5.6 Computational experiments . . . 234
6.6 Exercises . . . 237

7 Evolutionary inverse problems **240**
7.1 Non-local perturbation of initial conditions . . . 240
7.1.1 Problem statement . . . 240
7.1.2 General methods for solving ill-posed evolutionary problems . 241
7.1.3 Perturbed initial conditions . . . 243
7.1.4 Convergence of approximate solution to the exact solution . . 246
7.1.5 Equivalence between the non-local problem and the optimal control problem . . . 250
7.1.6 Non-local difference problems . . . 252
7.1.7 Program realization . . . 256
7.1.8 Computational experiments . . . 260
7.2 Regularized difference schemes . . . 263
7.2.1 Regularization principle for difference schemes . . . 263

7.2.2 Inverted-time problem . . . 267
7.2.3 Generalized inverse method . . . 269
7.2.4 Regularized additive schemes . . . 277
7.2.5 Program . . . 281
7.2.6 Computational experiments . . . 288
7.3 Iterative solution of retrospective problems . . . 291
7.3.1 Statement of the problem . . . 291
7.3.2 Difference problem . . . 292
7.3.3 Iterative refinement of the initial condition . . . 292
7.3.4 Program . . . 295
7.3.5 Computational experiments . . . 302
7.4 Second-order evolution equation . . . 305
7.4.1 Model problem . . . 305
7.4.2 Equivalent first-order equation . . . 307
7.4.3 Perturbed initial conditions . . . 308
7.4.4 Perturbed equation . . . 311
7.4.5 Regularized difference schemes . . . 314
7.4.6 Program . . . 319
7.4.7 Computational experiments . . . 324
7.5 Continuation of non-stationary fields from point observation data . . . 326
7.5.1 Statement of the problem . . . 326
7.5.2 Variational problem . . . 327
7.5.3 Difference problem . . . 329
7.5.4 Numerical solution of the difference problem . . . 331
7.5.5 Program . . . 333
7.5.6 Computational experiments . . . 340
7.6 Exercises . . . 343

8 Other problems **345**
8.1 Continuation over spatial variable in boundary value inverse problems 345
8.1.1 Statement of the problem . . . 346
8.1.2 Generalized inverse method . . . 347
8.1.3 Difference schemes for the generalized inverse method . . . 350
8.1.4 Program . . . 354
8.1.5 Examples . . . 359
8.2 Non-local distribution of boundary conditions . . . 362
8.2.1 Model problem . . . 362
8.2.2 Non-local boundary value problem . . . 362
8.2.3 Local regularization . . . 363
8.2.4 Difference non-local problem . . . 365
8.2.5 Program . . . 367
8.2.6 Computational experiments . . . 372
8.3 Identification of the boundary condition in two-dimensional problems 374

8.3.1 Statement of the problem 374
8.3.2 Iteration method 376
8.3.3 Difference problem 378
8.3.4 Iterative refinement of the boundary condition 380
8.3.5 Program realization 383
8.3.6 Computational experiments 390
8.4 Coefficient inverse problem for the nonlinear parabolic equation . . . 394
8.4.1 Statement of the problem 395
8.4.2 Functional optimization 396
8.4.3 Parametric optimization 399
8.4.4 Difference problem 402
8.4.5 Program 405
8.4.6 Computational experiments 411
8.5 Coefficient inverse problem for elliptic equation 414
8.5.1 Statement of the problem 414
8.5.2 Solution uniqueness for the inverse problem 415
8.5.3 Difference inverse problem 417
8.5.4 Iterative solution of the inverse problem 419
8.5.5 Program 421
8.5.6 Computational experiments 427
8.6 Exercises 430
