
Part I Theory

1	Electromagnetic Radiation from a Charged Particle in Crystals: Qualitative Consideration	3
1.1	Optical and X-ray Cherenkov Radiation in Homogeneous Media	3
1.2	Pseudophoton Spectrum of a Relativistic Electron	5
1.3	Coherent Bremsstrahlung, Resonant Radiation and Parametric Radiation in Crystals	8
1.4	Pioneering Experiments on the Observation of PXR	12
	References	16
2	Radiation from a Charged Particle in Periodic Media: Classical Theory	19
2.1	Representation of Radiation Field via Solution of the Homogeneous Maxwell's Equations	19
2.2	PXR from Relativistic Electrons in Thin Crystals	25
2.3	Mosaicity of Crystals and Multiple Scattering of an Electron Beam	33
2.4	Parametric γ -Radiation in Thin Mössbauer Crystals	37
	References	40
3	Dynamical Theory of Parametric X-ray Radiation	43
3.1	Quantum Electrodynamics for Radiation Processes in Crystals	43
3.2	Analytical Expressions for the Electron Wavefunction and the Vector Potential of the X-ray Field in a Crystal	45
3.3	Calculation of the Parametric X-ray Radiation and Coherent Bremsstrahlung Intensities	48

3.4	Dynamical Diffraction Effects in High-Resolution Parametric X-ray Radiation	51
	References	55
4	PXR from Nonrelativistic Electrons	57
4.1	Qualitative Analysis	57
4.2	Spectral-Angular Distribution of the Radiation from Nonrelativistic Electrons in Crystals	60
4.3	Simulation of Real Radiation Spectra	65
	References	71
Part II Experiments and Applications		
5	Interpretation of Experimental Results	75
5.1	Experimental Observation of PXR	75
5.2	Spectral Distribution of PXR Peaks from Relativistic Electrons	78
5.3	Investigation of the Production Mechanism of PXR	85
5.4	Angular Distribution and Polarization of PXR	92
5.5	Observation of PXR from Protons	98
	References	101
6	High-Resolution PXR Experiments	105
6.1	Spectral Width of PXR Peaks	105
6.2	Forward Direction PXR	110
6.3	Multiwave PXR	115
6.4	PXR in the Degenerate Case of Two-Beam Diffraction	122
	References	125
7	Prospective Applications of PXR	129
7.1	PXR as a Tunable Source of Monochromatic X-rays	129
7.2	Anomalous Scattering Method for Crystallography	137
7.3	Parametric Beam Instability and PXR Free-Electron Laser	146
	References	152
A	Appendix	155
A.1	X-ray Polarizability and Eigenwaves for the Electromagnetic Field in a Crystal	155
A.2	Asymptotic for the Green Function and Boundary Conditions for the Electromagnetic Field	157

A.3 Accurate Calculation of PXR with Multiple Scattering of Electrons.....	160
