Preface	xi
Acknowledgements	xiii
List of figures	xv
List of tables	xxi
List of abbreviations and acronyms	xxiii
1 Introduction	1
1.1 The giant outer planets	1
1.2 Observed atmospheres of the giant planets	4
1.2.1 Jupiter	5
1.2.2 Saturn	8
1.2.3 Uranus	10
1.2.4 Neptune	12
1.3 Satellites of the outer planets	14
1.4 Exploration of the outer planets	14
1.5 Organization of the book	16
1.6 Bibliography	16
2 Formation of the giant planets	19
2.1 Formation of the universe and primordial constituents	19
2.2 Formation of the stars and evolution of the interstellar medium	20
2.3 Formation of the proto-solar nebula	22
2.3.1 Collapse of the interstellar cloud	22
2.3.2 Formation and evolution of circumstellar disks	24
2.4 Formation of the Jovian planets and comets	29
2.4.1 Core accretion model	30

2.4.2	Gravitational instability model	34
2.4.3	Migration	35
2.5	Formation of Jovian satellites	36
2.6	Bulk composition of the outer planets and isotope ratios	37
2.6.1	Constraints on formation: bulk composition X/H	37
2.6.2	Constraints on formation: D/H ratio	43
2.6.3	Constraints on formation: nitrogen $^{15}\text{N}/^{14}\text{N}$ ratio	46
2.6.4	Constraints on formation: carbon $^{12}\text{C}/^{13}\text{C}$ ratio	47
2.7	Interiors of the giant planets	47
2.7.1	Gravitational data	48
2.7.2	Magnetic field data	51
2.7.3	Internal structure of Jupiter and Saturn	51
2.7.4	Internal structure of Uranus and Neptune	54
2.8	Bibliography	56
3	Evolution processes in outer-planet atmospheres	59
3.1	Introduction	59
3.2	Thermal escape	59
3.2.1	Jeans' formula	59
3.2.2	Diffusion and limiting flux	61
3.2.3	Hydrodynamic escape	63
3.3	Impacts with comets and planetesimals	64
3.4	Internal differentiation processes	65
3.4.1	Effective radiating temperature of planets	65
3.5	Evolution of the giant planet atmospheres	67
3.5.1	Jupiter	67
3.5.2	Saturn	69
3.5.3	Uranus and Neptune	69
3.6	Bibliography	71
4	Vertical structure of temperature, composition, and clouds	73
4.1	Pressure and temperature profiles	73
4.1.1	Pressure	73
4.1.2	Temperature	74
4.1.3	Secondary effects on temperature/pressure profiles	79
4.1.4	Temperature/pressure profiles of the outer planets	82
4.2	Vertical mixing—eddy mixing coefficients	83
4.3	Composition profiles: general considerations	87
4.3.1	Disequilibrium species	87
4.3.2	Photolysis	89
4.3.3	Condensation	95
4.3.4	Extrplanetary sources	97
4.4	Composition and cloud profiles of the giant planets	98
4.4.1	Jupiter	98
4.4.2	Saturn	112

4.4.3	Uranus	121
4.4.4	Neptune	128
4.5	Bibliography	139
5	Dynamical processes	141
5.1	Introduction	141
5.2	Mean circulation of the giant planet atmospheres	141
5.2.1	Equations of motion	143
5.2.2	Mean zonal motions in the giant planet atmospheres	150
5.3	Eddy motion in the giant planet atmospheres	156
5.3.1	Turbulence in the giant planet atmospheres	157
5.3.2	Waves in the giant planet atmospheres	161
5.3.3	Vortices in the giant planet atmospheres	165
5.4	Mean and eddy circulation of the giant planet atmospheres	168
5.4.1	Tropospheric circulation and jets	168
5.4.2	Stratospheric and upper-tropospheric circulation	176
5.5	Meteorology of Jupiter	177
5.5.1	General circulation and zonal structure	177
5.5.2	Storms and vortices	180
5.5.3	Waves	185
5.6	Meteorology of Saturn	190
5.6.1	General circulation and zonal structure	190
5.6.2	Storms and vortices	196
5.6.3	Waves	198
5.7	Meteorology of Uranus	203
5.7.1	General circulation and zonal structure	203
5.7.2	Storms and vortices	206
5.7.3	Waves	206
5.8	Meteorology of Neptune	207
5.8.1	General circulation and zonal structure	207
5.8.2	Storms and vortices	209
5.8.3	Waves	212
5.9	Bibliography	213
6	Radiative transfer processes in outer-planetary atmospheres	215
6.1	Introduction	215
6.2	Interaction between electromagnetic radiation and particles	216
6.2.1	Fermi's golden rule	216
6.2.2	Electric and magnetic moments	217
6.3	Molecular spectroscopy: vibrational-rotational transitions	218
6.3.1	Molecular vibrational energy levels	218
6.3.2	Molecular rotational energy levels	219
6.3.3	Rotational transitions	221
6.3.4	Vibration-rotation bands	222
6.3.5	Inversion bands and inversion doubling	226

6.3.6	Diatomic homonuclear molecules	226
6.3.7	Line broadening	227
6.3.8	Giant planet gas transmission spectra	229
6.4	Radiative transfer in a gray atmosphere	230
6.4.1	Nadir viewing	231
6.4.2	Net flux and disk averaging	235
6.4.3	Limb viewing	237
6.4.4	Radiative balance	238
6.4.5	Local thermodynamic equilibrium	239
6.4.6	Transmission calculations	240
6.5	Scattering of light by particles	243
6.5.1	Rayleigh or dipole scattering	244
6.5.2	Mie theory	245
6.5.3	Nonspherical particles	247
6.5.4	Analytical forms of phase functions	247
6.6	Radiative transfer in scattering atmospheres	247
6.6.1	Plane-parallel approximation	248
6.6.2	Spherical atmospheres and limb viewing: Monte Carlo simulations	250
6.7	Giant planet spectra	251
6.7.1	General features of giant planet spectra: UV to microwave	251
6.7.2	Near-IR and visible reflectance spectra	252
6.7.3	Thermal-IR spectra	254
6.7.4	Microwave spectra	260
6.8	Appendix	261
6.8.1	Planck function	261
6.9	Bibliography	262
7	Sources of remotely sensed data on the giant planets	263
7.1	Introduction	263
7.2	Measurement of visible, IR, and microwave spectra	264
7.2.1	Detection of IR radiation	264
7.2.2	Radiometers/Photometers	265
7.2.3	Grating spectrometers	266
7.2.4	Michelson interferometers	267
7.2.5	Detection of microwave radiation	270
7.3	Ground-based observations of the giant planets	271
7.3.1	Terrestrial atmospheric absorption	272
7.3.2	Angular resolution	273
7.3.3	Brightness	278
7.4	Ground-based visible/IR observatories	279
7.4.1	European Southern Observatory (ESO); Very Large Telescope (VLT)	280
7.4.2	The Mauna Kea observatories	282
7.4.3	Other major observatories	285

7.5	Airborne visible/IR observations	286
7.5.1	Kuiper Airborne Observatory	286
7.6	Ground-based microwave observatories	287
7.6.1	The Institut de RadioAstronomie Millimétrique (IRAM)	288
7.6.2	Very Large Array (VLA)	289
7.6.3	Very Large Baseline Array (VLBA)	291
7.6.4	Combined Array for Research in Millimeter-wave Astronomy (CARMA)	291
7.6.5	Nobeyama Millimeter Array (NMA)	292
7.7	Space-based telescopes	292
7.7.1	HST	293
7.7.2	ISO	296
7.7.3	Submillimeter Wave Astronomy Satellite (SWAS)	300
7.7.4	<i>Spitzer</i>	300
7.7.5	AKARI	303
7.8	Flyby spacecraft	303
7.8.1	<i>Pioneer</i>	304
7.8.2	<i>Voyager</i>	308
7.8.3	<i>Ulysses</i>	312
7.8.4	<i>New Horizons</i>	313
7.9	Orbiting spacecraft	314
7.9.1	<i>Galileo</i>	314
7.9.2	<i>Cassini/Huygens</i>	320
7.10	Retrievals	329
7.10.1	Exact, least-squares, and Backus–Gilbert solutions	330
7.10.2	Linear optimal estimation	331
7.10.3	Nonlinear optimal estimation	333
7.10.4	Joint retrievals	335
7.11	Bibliography	335
8	Future of giant planet observations	337
8.1	Introduction	337
8.2	Ground-based visible/infrared (IR) observations	338
8.2.1	Very Large Telescope Interferometer (VLTI)	338
8.2.2	Keck Interferometer	339
8.2.3	Large Binocular Telescope (LBT)	340
8.2.4	Extremely large telescopes (ELTs)	341
8.3	Airborne visible/IR observations	343
8.3.1	SOFIA	343
8.4	Ground-based microwave observations	344
8.4.1	Atacama Large Millimeter Array Project (ALMA)	344
8.5	Space telescope observations	345
8.5.1	<i>Herschel</i>	345
8.5.2	James Webb Space Telescope (JWST)	347
8.6	Spacecraft missions to the giant planets	350

8.6.1	<i>Juno</i>	350
8.6.2	<i>Rosetta</i>	352
8.6.3	Future outer-planet missions	355
8.7	Extrasolar planet space missions	355
8.7.1	<i>Kepler</i>	356
8.7.2	Convection, Rotation and Transits (COROT) mission . .	358
8.7.3	Terrestrial Planet Finder (TPF) and Space Interferometry Mission (SIM)	359
8.7.4	<i>Darwin</i>	361
8.8	Conclusion	362
8.9	Bibliography.	365
