Contents

1 Introduction 1

References 4

2 Preliminaries 6

2.1 Sets and Relations 6

2.2 Problems, Algorithms, Complexity 8
2.2.1 Problems and their Encoding 8
2.2.2 Algorithms 10
2.2.3 Complexity 13

2.3 Graphs and Networks 17
2.3.1 Basic Notions 17
2.3.2 Special Classes of Digraphs 18
2.3.3 Networks 21

2.4 Enumerative Methods 27
2.4.1 Dynamic Programming 28
2.4.2 Branch and Bound 28

2.5 Heuristic and Approximation Algorithms 30

References 35

3 Formulation of Scheduling Problems 38

3.1 Definition of Scheduling Problems 38

3.2 Analysis of Scheduling Problems and Algorithms 42

3.3 Motivations for Deterministic Scheduling Problems 45

3.4 Classification of Deterministic Scheduling Problems 47

References 50

4 Single Processor Scheduling 52

4.1 Minimizing Schedule Length 52
4.1.1 Scheduling with Release Times and Deadlines 53
4.1.2 Scheduling with Release Times and Delivery Times 59

4.2 Minimizing Mean Weighted Flow Time 61

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

4.3 Minimizing Due Date Involving Criteria 74
4.3.1 Maximum Lateness 74
4.3.2 Number of Tardy Tasks 82
4.3.3 Tardiness Problems 87
4.3.4 Earliness and Lateness Problems 90

4.4 Other Criteria 91
4.4.1 Minimizing Maximum Cost 91
4.4.2 Minimizing Mean Cost 95

4.5 Minimizing Change-Over Cost 98
4.5.1 Setup Scheduling 99
4.5.2 Lot Size Scheduling 101

References 107

5 Parallel Processor Scheduling 113

5.1 Minimizing Schedule Length 113
5.1.1 Identical Processors 113
5.1.2 Uniform and Unrelated Processors 130

5.2 Minimizing Mean Flow Time 139
5.2.1 Identical Processors 139
5.2.2 Uniform and Unrelated Processors 140

5.3 Minimizing Due Date Involving Criteria 143
5.3.1 Identical Processors 143
5.3.2 Uniform and Unrelated Processors 148

5.4 Other Models 152
5.4.1 Semi-Identical Processors 152
5.4.2 Scheduling Multiprocessor Tasks 161

References 165

6 Static Shop Scheduling 172

6.1 Flow Shop Scheduling 172

6.2 Open Shop Scheduling 178

6.3 Job Shop Scheduling 179
6.3.1 Basic Ideas 179
6.3.2 Branch and Bound Algorithm 182
6.3.3 Simulated Annealing 185
6.3.4 Computational Results 187

References 190

7 Resource Constrained Scheduling 193

7.1 Classical Model 193

7.2 Scheduling Multiprocessor Tasks 202

7.3 Scheduling with Continuous Resources 216
7.3.1 Introductory Remarks 216
7.3.2 Processing Speed vs. Resource Amount Model 217
7.3.3 Processing Time vs. Resource Amount Model 225
7.3.4 Ready Time vs. Resource Amount Model 229

References 233

8 Scheduling in Flexible Manufacturing Systems 236

8.1 Introductory Remarks 236

8.2 Scheduling Flexible Flow Shops 238
8.2.1 Problem Formulation 238
8.2.2 Heuristics and their Performance 239
8.2.3 Branch and Bound Algorithm 241

8.3 Scheduling Dynamic Job Shops 246
8.3.1 Introductory Remarks 246
8.3.2 Heuristic Algorithm for the Static Problem 247
8.3.3 Computational Experiments 253

8.4 Simultaneous Scheduling and Routing in some FMS 254
8.4.1 Problem Formulation 254
8.4.2 Vehicle Scheduling for a Fixed Production Schedule 256
8.4.3 Simultaneous Job and Vehicle Scheduling 260

References 262

9 Knowledge-Based Scheduling 265

9.1 Scheduling in Computer Integrated Manufacturing 266

9.2 Solution Approaches Based on Artificial Intelligence 270
9.2.1 Interactive Scheduling 274
9.2.2 Knowledge-Based Systems 284

9.3 Integration of Knowledge and Algorithms 289
9.3.1 Intelligent Production Scheduling 290
9.3.2 Integrated Problem Solving 293
