

# Contents

<b>1. Introduction</b>	<b>1</b>
<b>2. Exchange Enhancement Effect During Phase Transitions in Magnetically Ordered Crystals</b>	<b>16</b>
2.1 Phase Transition in a Ferromagnet with Quadrupole Interaction	16
2.2 Phase Transition in an Antiferromagnet in a Strong Magnetic Field	24
2.3 Fluctuations and Spin Waves in Ferroelectro-antiferromagnets in a Strong Magnetic Field	35
2.4 Phase Transition in a Crystal with Dislocations in a Strong Magnetic Field	38
<b>3. Phase Lamination and the Exchange Enhancement Effect</b>	<b>45</b>
3.1 Phase Transitions in Complex Magnetic Structures and the Exchange Enhancement Effect in Spin-Orbit Interaction	45
3.2 Phase Diagrams of Complex Magnetic Structures: Phase Lamination	62
3.3 Phase Transitions in Ferroelectro-antiferromagnets	70
<b>4. Superconducting Phases in Rare-Earth Metal Compounds: Phenomenological Theory</b>	<b>75</b>
4.1 Superconducting Compounds of Rare-Earth Metals: Formulation of the Problem	75
4.2 Fluctuation Free Energy: Renormalization Group Equations	81
4.3 Phase Diagram of the Superconducting Compounds of Rare-Earth Metals	84
4.4 Topological Analysis of the Phase Diagram of Superconducting Compounds of Rare-Earth Metals	94
<b>5. Theory of High-Temperature Superconducting Phases in Rare-Earth Metal Compounds</b>	<b>100</b>
5.1 Lagrangian of the System near the Point of Phase Transition to Superconducting State	100

5.2	Electron-Phonon Interaction Parameter for the High-Temperature Superconducting Phase .....	106
<b>6.</b>	<b>Solitons in the Theory of Superconductivity of Magnetic Systems ..</b>	<b>112</b>
6.1	Generalized Order Parameter in Magnetic Superconductors: Equations for the Superconducting Phase .....	112
6.2	Soliton Mechanism for Emergence of Superconductivity Accompanying a Phase Transition from Superconducting to Paramagnetic States .....	116
6.3	Solitons in an Inhomogeneous Superconducting State and Topology .....	119
6.4	Solitons in the Phase of Coexistence of Superconductivity and Magnetism .....	127
<b>7.</b>	<b>Spin Glasses Based on Rare-Earth Metal Compounds .....</b>	<b>133</b>
7.1	Phase Transitions in Heavy Rare-Earth Metals .....	133
7.2	Modern Spin Glass Models .....	140
7.3	Peculiarities of Vector Fields in Heavy Rare-Earth Metals .....	146
7.4	Magnetic Susceptibility in the New Spin Glasses .....	155
7.5	Superconducting Phases in Spin Glasses .....	161
7.6	Peculiarities of Spin-Wave Dynamics in Spin Glasses .....	165
<b>8.</b>	<b>High-Temperature Superconducting Ceramics .....</b>	<b>169</b>
8.1	High-Temperature Superconducting Oxides .....	169
8.2	Spectrum of Quasi-Particles Exchanged by Electrons in HTS Ceramics .....	172
8.3	Possibility of Increasing the Critical Temperature: Properties of High-Temperature Superconductors .....	179
<b>9.</b>	<b>Theory of High-Temperature Superconductivity of Ceramic Systems .....</b>	<b>190</b>
9.1	Microscopic Equations for the Superconducting Phase .....	190
9.2	Separation of Many-Particle Averages in the Superconducting Phase Equations: Wick's Theorem .....	197
9.3	Electron-Phonon Interaction in Superconducting Phases: Superconducting Transition Temperature .....	208
9.4	Phase Lamination in Superconducting States .....	217
9.5	Microscopic Equations near the Phase Transition Point: Relation to the Phenomenological Theory .....	222
<b>10.</b>	<b>Theory of High-Temperature Superconductivity of Polymer Systems .....</b>	<b>234</b>
10.1	Quasi-One-Dimensional Organic Superconductors: Polyacetylene as a Possible Superconductor .....	234

10.2 Criterion for the Emergence of Superconductivity  
in Polyacetylene ..... 241

10.3 High-Frequency Properties of Polyacetylene in the  
Nonsuperconducting State ..... 245

**References** ..... 249

**Subject Index** ..... 257
