

Walter Gander · Jiří Hřebíček

Solving Problems in Scientific Computing Using Maple and MATLAB®

Second, Expanded Edition

With 106 Figures and 8 Tables

Springer

Contents

Chapter 1. The Tractrix and Similar Curves	1
1.1 Introduction	1
1.2 The Classical Tractrix	1
1.3 The Child and the Toy	3
1.4 The Jogger and the Dog	6
1.5 Showing the Motions with MATLAB	11
References	14
Chapter 2. Trajectory of a Spinning Tennis Ball . . .	15
2.1 Introduction	15
2.2 MAPLE Solution	17
2.3 MATLAB Solution	21
References	23
Chapter 3. The Illumination Problem	25
3.1 Introduction	25
3.2 Finding the Minimal Illumination Point on a Road	26
3.3 Varying h_2 to Maximize the Illumination	29
3.4 Optimal Illumination	31
3.5 Conclusion	36
References	36
Chapter 4. Orbits in the Planar Three-Body Problem . . .	37
4.1 Introduction	37
4.2 Equations of Motion in Physical Coordinates	38
4.3 Global Regularization	42
4.4 The Pythagorean Three-Body Problem	47
4.5 Conclusions	55
References	57
Chapter 5. The Internal Field in Semiconductors . . .	59
5.1 Introduction	59
5.2 Solving a Nonlinear Poisson Equation Using MAPLE	60
5.3 MATLAB Solution	66
References	67

Chapter 6. Some Least Squares Problems	69
6.1 Introduction	69
6.2 Fitting Lines, Rectangles and Squares in the Plane	69
6.3 Fitting Hyperplanes	81
References	87
 Chapter 7. The Generalized Billiard Problem	 89
7.1 Introduction	89
7.2 The Generalized Reflection Method	89
7.2.1 Line and Curve Reflection	90
7.2.2 Mathematical Description	91
7.2.3 MAPLE Solution	92
7.3 The Shortest Trajectory Method	93
7.3.1 MAPLE Solution	94
7.4 Examples	94
7.4.1 The Circular Billiard Table	94
7.4.2 The Elliptical Billiard Table	98
7.4.3 The Snail Billiard Table	100
7.4.4 The Star Billiard Table	102
7.5 Conclusions	105
References	107
 Chapter 8. Mirror Curves	 109
8.1 The Interesting Waste	109
8.2 The Mirror Curves Created by MAPLE	109
8.3 The Inverse Problem	110
8.3.1 Outflanking Manoeuvre	110
8.3.2 Geometrical Construction of a Point on the Pattern Curve	112
8.3.3 MAPLE Solution	113
8.3.4 Analytic Solution	114
8.4 Examples	114
8.4.1 The Circle as the Mirror Curve	114
8.4.2 The Line as the Mirror Curve	117
8.5 Conclusions	118
References	120
 Chapter 9. Smoothing Filters	 121
9.1 Introduction	121
9.2 Savitzky-Golay Filter	121
9.2.1 Filter Coefficients	122
9.2.2 Results	125
9.3 Least Squares Filter	126

9.3.1	Lagrange Equations	127
9.3.2	Zero Finder	129
9.3.3	Evaluation of the Secular Function	130
9.3.4	MEX-Files	133
9.3.5	Results	135
References		139
Chapter 10.	The Radar Problem	141
10.1	Introduction	141
10.2	Converting Degrees into Radians	142
10.3	Transformation of Geographical into Geocentric Co-ordinates	143
10.4	The Transformations	146
10.5	Final Algorithm	148
10.6	Practical Example	150
References		151
Chapter 11.	Conformal Mapping of a Circle	153
11.1	Introduction	153
11.2	Problem Outline	153
11.3	MAPLE Solution	154
References		159
Chapter 12.	The Spinning Top	161
12.1	Introduction	161
12.2	Formulation and Basic Analysis of the Solution	163
12.3	The Numerical Solution	168
References		171
Chapter 13.	The Calibration Problem	173
13.1	Introduction	173
13.2	The Physical Model Description	173
13.3	Approximation by Splitting the Solution	176
13.4	Conclusions	182
References		182
Chapter 14.	Heat Flow Problems	183
14.1	Introduction	183
14.2	Heat Flow through a Spherical Wall	183
14.2.1	A Steady State Heat Flow Model	184
14.2.2	Fourier Model for Steady State	185
14.2.3	MAPLE Plots	186
14.3	Non Stationary Heat Flow through an Agriculture Field	187
14.3.1	MAPLE Plots	191
References		191

Chapter 15. Modeling Penetration Phenomena . . .	193
15.1 Introduction	193
15.2 Short description of the penetration theory	193
15.3 The Tate - Alekseevskii model	195
15.3.1 Special case $R_t = Y_p$	197
15.3.2 Special case $\rho_p = \rho_t = \rho$	198
15.4 The eroding rod penetration model	200
15.5 Numerical Example	205
15.6 Conclusions	208
References	208
 Chapter 16. Heat Capacity of System of Bose Particles	211
16.1 Introduction	211
16.2 MAPLE Solution	213
References	218
 Chapter 17. Free Metal Compression	219
17.1 Introduction	219
17.2 Disk compression	219
17.2.1 Mathematical and Physical Model	219
17.2.2 Parabolic Perimeter	221
17.2.3 MAPLE Solution	221
17.2.4 Base Radius as Function of Friction	222
17.2.5 Simplification	223
17.2.6 Graphics	224
17.3 Compression of a metal prism	225
17.3.1 The basic functions	228
17.3.2 The lateral sides distortion	231
17.3.3 Graphics	233
17.4 Conclusions	236
References	236
 Chapter 18. Gauss Quadrature	237
18.1 Introduction	237
18.2 Orthogonal Polynomials	238
18.3 Quadrature Rule	252
18.4 Gauss Quadrature Rule	253
18.5 Gauss-Radau Quadrature Rule	254
18.6 Gauss-Lobatto Quadrature Rule	257
18.7 Weights	260
18.8 Quadrature Error	261
References	264

Chapter 19. Symbolic Computation of Explicit Runge-Kutta Formulas	267
19.1 Introduction	267
19.2 Derivation of the Equations for the Parameters	269
19.3 Solving the System of Equations	271
19.3.1 Gröbner Bases	273
19.3.2 Resultants	275
19.4 The Complete Algorithm	277
19.4.1 Example 1:	279
19.4.2 Example 2:	279
19.5 Conclusions	282
References	283
 Chapter 20. Transient Response of a Two-Phase Half-Wave Rectifier	285
20.1 Introduction	285
20.2 Problem Outline	285
20.3 Difficulties in Applying Conventional Codes and Software Packages	288
20.4 Solution by Means of Maple	290
References	296
 Chapter 21. Circuits in Power Electronics	299
21.1 Introduction	299
21.2 Linear Differential Equations with Piecewise Constant Coefficients	301
21.3 Periodic Solutions	304
21.4 A MATLAB Implementation	305
21.5 Conclusions	311
References	311
