|-------------------------------------------------------------------------------------------------------------------------------------------------|------|
| <b>Preface</b> .....                                                                                                                            | v    |
| <b>Contributors</b> .....                                                                                                                       | xvii |
| <b>GROUP SUMMARY: EXPERIMENTS</b>                                                                                                               |      |
| <i>Stephen P. Wilkinson</i> .....                                                                                                               | 1    |
| Controlled Experiments on Resonant Cross-Flow<br>Mode Interactions<br><i>Thomas C. Corke</i> .....                                              | 4    |
| High Speed Boundary Layer Transition on a<br>Blunt Nose Flare with Roughness<br><i>Steven P. Schneider and Ivan E. Beckwith</i> .....           | 18   |
| <b>SUMMARY: MINI-SYMPOSIUM ON TURBULENT<br/>FLOW OVER A BACKWARD-FACING STEP</b>                                                                |      |
| <i>Scott O. Kjeldgaard and Siva Thangam</i> .....                                                                                               | 28   |
| <b>GROUP SUMMARY: ADVANCED ASYMPTOTICS I</b>                                                                                                    |      |
| <i>Philip Hall</i> .....                                                                                                                        | 37   |
| The Inviscid Instability of a Nonlinear Görtler Vortex<br>State in a Large Mach Number Boundary Layer Flow<br><i>Nicholas D. Blackaby</i> ..... | 41   |
| On the Interaction of Görtler Vortices and<br>Tollmien-Schlichting Waves in Boundary Layer Flows<br><i>Andrew Bassom and Philip Hall</i> .....  | 51   |
| On the Nonlinear Evolution of Large Wavelength<br>Görtler Vortices<br><i>Meelan Choudhari and Philip Hall</i> .....                             | 61   |
| Vortex-Wave Interaction in a Strong Adverse<br>Pressure Gradient<br><i>A. G. Walton, R. I. Bowles, and F. T. Smith</i> .....                    | 79   |

**GROUP SUMMARY: ADVANCED ASYMPTOTICS II**

|                                                                                               |     |
|-----------------------------------------------------------------------------------------------|-----|
| <i>Manuel D. Salas</i> .....                                                                  | 93  |
| Ellipticity in the Vortex Breakdown Problem                                                   |     |
| <i>Stanley A. Berger</i> .....                                                                | 96  |
| Inviscid Stability of Hypersonic Strong Interaction<br>Flow Over a Flat Plate                 |     |
| <i>Norman D. Malmuth</i> .....                                                                | 107 |
| Nonseparable Eigenmodes of the Incompressible<br>Boundary Layer                               |     |
| <i>C. E. Grosch, T. L. Jackson, and A. K. Kapila</i> .....                                    | 127 |
| Spatially-Quasiperiodic States in Shear Flows                                                 |     |
| <i>Thomas J. Bridges</i> .....                                                                | 137 |
| <b>GROUP SUMMARY: ADVANCED STABILITY</b>                                                      |     |
| <i>Mujeeb R. Malik</i> .....                                                                  | 147 |
| Effect of Suction on the Stability of Flow on a<br>Rotating Disk                              |     |
| <i>Manhar R. Dhanak</i> .....                                                                 | 151 |
| Nonparallel Stability of Rotating Disk Flow Using PSE                                         |     |
| <i>M. R. Malik and P. Balakumar</i> .....                                                     | 168 |
| Local and Non-Local Stability Theory of Spatially<br>Varying Flows                            |     |
| <i>Martin Simen</i> .....                                                                     | 181 |
| Temperature Effects on the Instability of an<br>Infinite Swept Attachment Line                |     |
| <i>D. G. Lasseigne and T. L. Jackson</i> .....                                                | 202 |
| Stability of Velocity Profiles with Reverse Flow                                              |     |
| <i>M. Gaster</i> .....                                                                        | 212 |
| Boundary-Layer Transition: Critical-Layer<br>Nonlinearity in Fully Interactive Resonant Triad |     |
| <i>Reda R. Mankbadi</i> .....                                                                 | 216 |

|                                                                                                                                                                           |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Oblique Mode Breakdown in a Supersonic<br>Boundary Layer Using Nonlinear PSE<br><i>C.-L. Chang and M. R. Malik</i> .....                                                  | 231 |
| Discrete Modes and Continuous Spectra in a<br>Mach 2 Boundary Layer<br><i>P. Balakumar and M. R. Malik</i> .....                                                          | 242 |
| On the Stability of Normal Shock Waves<br><i>P. W. Duck and P. Balakumar</i> .....                                                                                        | 253 |
| <b>GROUP SUMMARY: SIMULATION I</b>                                                                                                                                        |     |
| <i>Craig L. Streett</i> .....                                                                                                                                             | 267 |
| Effects of Inflow Disturbances on Spatially-Evolving<br>Instability in Plane Channel Flow<br><i>E. M. Saiki and S. Biringen</i> .....                                     | 271 |
| A Spectral Multi-Domain Code for the Navier-Stokes<br>Equations<br><i>G. Danabasoglu, S. Biringen, and Craig L. Streett</i> .....                                         | 283 |
| A Preliminary Study of Crossflow Transition on a Swept<br>Wing by Spatial Direct Numerical Simulation<br><i>Ronald D. Joslin and Craig L. Streett</i> .....               | 294 |
| Oblique-Wave Breakdown in an Incompressible Boundary<br>Layer Computed by Spatial DNS and PSE Theory<br><i>Ronald D. Joslin, Craig L. Streett, and Chau-Lyan Chang</i> .. | 304 |
| Simulation of Nonlinear Tollmien-Schlichting Wave Growth<br>through a Laminar Separation Bubble<br><i>C. P. van Dam and S. Elli</i> .....                                 | 311 |
| <b>GROUP SUMMARY: SIMULATION II</b>                                                                                                                                       |     |
| <i>Thomas A. Zang</i> .....                                                                                                                                               | 323 |
| Reynolds Stress Budget in a Transitional Channel Flow<br><i>Surya P. G. Dinavahi and Thomas A. Zang</i> .....                                                             | 327 |

|                                                                                                                                                                            |     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Outgoing Acoustic Waves in an Unstable Supersonic<br>Laminar Boundary Layer over a Flexible Surface<br><i>Abdelkader Frendi, Lucio Maestrello, and Alvin Bayliss</i> ..... | 337 |
| On the Non-Uniqueness of the Parallel-Flow Approximation<br><i>C. David Pruett, Lian L. Ng, and Gordon Erlebacher</i> .....                                                | 344 |
| Channel Flow Transition Induced by a Pair of Oblique Waves<br><i>P. J. Schmid and D. S. Henningson</i> .....                                                               | 356 |
| The Formation and Growth of a Hairpin Vortex<br><i>Bart A. Singer</i> .....                                                                                                | 367 |
| Aspects of Laminar Breakdown in Boundary-Layer Transition<br><i>Thomas A. Zang</i> .....                                                                                   | 377 |
| <b>GROUP SUMMARY: SIMULATION III</b>                                                                                                                                       |     |
| <i>Gordon Erlebacher</i> .....                                                                                                                                             | 389 |
| Instability of Wall-Bounded Compressible Reacting<br>Mixing Layers<br><i>Dongshin Shin</i> .....                                                                           | 393 |
| Stability of High Speed Compressible Rotating Couette Flow<br><i>F. Hatay, S. Biringen, and G. Erlebacher</i> .....                                                        | 404 |
| <b>GROUP SUMMARY: RECEPTIVITY</b>                                                                                                                                          |     |
| <i>Michele G. Macaraeg</i> .....                                                                                                                                           | 417 |
| Effect of Leading-Edge Geometry on Boundary-Layer<br>Receptivity to Freestream Sound<br><i>N. Lin, H. L. Reed, and W. S. Saric</i> .....                                   | 421 |
| Effect of Nose Bluntness on Leading-Edge Receptivity<br><i>P. W. Hammerton and E. J. Kerschen</i> .....                                                                    | 441 |
| Leading-Edge Receptivity to a Vortical Freestream<br>Disturbance: A Numerical Analysis<br><i>Thomas A. Buter and Helen L. Reed</i> .....                                   | 452 |

|                                                                                                                                                                 |     |
