

Marc Baus Carlos F. Tejero

Equilibrium Statistical Physics

Phases of Matter and Phase Transitions

With 82 Figures and 8 Tables

 Springer

Contents

Part I Basics

1	Mechanics	3
1.1	Classical Mechanics	3
1.2	Hamilton's Equations	4
1.3	External Parameters	5
1.4	Dynamical Functions	7
1.5	Quantum Mechanics	9
1.6	Self-adjoint Operators	10
1.7	Eigenvalue Equation	11
1.8	Schrödinger's Equation	13
1.8.1	Free Particle	14
1.8.2	Harmonic Oscillator	16
1.8.3	Particle in a Magnetic Field	16
1.9	System of Identical Particles	18
	References	20
2	Thermodynamics	21
2.1	Fundamental Equation	21
2.2	Intensive Variables	23
2.3	Law of Entropy Increase	25
2.4	Thermodynamic Potentials	26
2.5	Equilibrium Conditions	28
2.6	Stability Conditions	29
2.7	Coexistence Conditions	32
2.8	Phase Diagrams	33
2.8.1	Gibbs Free Energy	33
2.8.2	Helmholtz Free Energy	37
2.8.3	van der Waals Loop	39
2.8.4	An Example of a Phase Diagram	41
	References	43

3	Statistical Physics	45
3.1	Dynamical Functions and Fields	46
3.2	Liouville's Equation	48
3.3	Systems in Equilibrium	49
3.4	Density Operator	51
3.5	Ergodicity	53
3.6	Thermodynamic Limit	55
3.7	Symmetry Breaking	61
	References	63

Part II Ideal Systems

4	Microcanonical Ensemble	67
4.1	Classical Microcanonical Ensemble	67
4.2	Classical Ideal Gas	69
4.3	Entropy and the Gibbs Paradox	71
4.4	Temperature and Thermal Equilibrium	75
4.5	Ideal Systems	77
4.6	Equipartition Theorem	78
4.7	Equation of State	79
4.8	Entropy and Irreversibility	81
4.9	Quantum Microcanonical Ensemble	83
4.10	Absolute Negative Temperatures	86
	References	88
5	Canonical Ensemble	89
5.1	Classical Canonical Ensemble	89
5.2	Mean Values and Fluctuations	91
5.3	Helmholtz Free Energy	93
5.4	Classical Ideal Gas	94
5.5	Ideal Gas in an External Potential	95
5.6	Equipartition Theorem	97
5.7	Classical Theory of Radiation	99
5.8	Classical Theory of Solids	101
5.9	Quantum Canonical Ensemble	103
5.10	Ideal Quantum Systems	105
5.11	Maxwell-Boltzmann Statistics	106
5.12	Maxwell-Boltzmann's Ideal Gas	108
5.13	Brillouin's Paramagnetism	109
5.14	Photon Gas	111
5.15	Phonon Gas	114
	References	119

6	Grand Canonical Ensemble	121
6.1	Classical Grand Canonical Ensemble	121
6.2	Mean Values and Fluctuations	125
6.3	Grand Potential	127
6.4	Classical Ideal Gas	128
6.5	Classical Ideal Gas in an External Potential	129
6.6	Two-Particle Distribution Function	131
6.7	Density Fluctuations	133
6.8	Correlations at the Critical Point	135
6.9	Quantum Grand Canonical Ensemble	138
6.10	Bose–Einstein and Fermi–Dirac Statistics	139
6.11	Virial Expansions in the Classical Limit	142
6.12	Boson Gas: Bose–Einstein Condensation	144
6.12.1	Specific Heat	147
6.12.2	Equation of State	150
6.13	Fermion Gas	152
	References	158
 Part III Non-ideal Systems		
7	Classical Systems with Interactions	163
7.1	Thermodynamic Integration	163
7.2	Thermodynamic Perturbation Theory	165
7.3	Virial Expansions	167
7.4	Direct Correlation Function	171
7.5	Density Functional Theory	173
7.6	Mean Field Theory	175
7.7	Numerical Simulations	177
7.7.1	Molecular Dynamics	178
7.7.2	Monte Carlo Method	179
	References	183
8	Phases of Matter	185
8.1	Crystals	186
8.1.1	Crystal Structure	186
8.1.2	Cell Theory	188
8.1.3	van der Waals Theory	191
8.1.4	Variational Theory	192
8.2	Fluids	196
8.2.1	Dense Fluids	196
8.2.2	Fluid Structure	199
8.2.3	Fluids and Glasses	203
8.2.4	Vapor and Liquid	206

8.3	Mixtures	209
8.3.1	Binary Mixtures	209
8.3.2	Colloidal Suspensions	211
8.3.3	Asakura–Oosawa Potential	213
8.3.4	DLVO Potential	215
8.4	Liquid Crystals	216
8.4.1	Maier–Saupe Theory	217
8.4.2	Onsager Theory	220
8.5	Polymers	223
8.5.1	Radius of Gyration	224
8.5.2	Flory–Huggins Theory	226
	References	231
9	Phase Transitions	233
9.1	Structural Transitions	233
9.1.1	Fluid–Solid Transition	234
9.1.2	Isotropic–Nematic Transition	237
9.2	Isostructural Transitions	239
9.2.1	Liquid–Vapor Transition	239
9.2.2	Solid–Solid Transition	241
9.3	Symmetry Breaking and Order Parameters	242
9.4	Landau Theory	245
9.4.1	Continuous Transitions	247
9.4.2	Discontinuous Transitions	247
9.5	Bifurcation Theory	248
9.6	Critical Points	251
9.6.1	Isolated Critical Points	251
9.6.2	Liquid–Vapor Critical Point	253
9.6.3	Solid–Solid Critical Point	254
9.6.4	Consolute Critical Point	256
9.6.5	Critical Lines	259
9.7	Summary	261
9.8	Triple Points	262
9.8.1	Ordinary Triple Point	262
9.8.2	Critical Endpoint	263
9.8.3	Bicritical Point	264
9.8.4	Tricritical Point	265
	References	265

Part IV More Advanced Topics

10 Critical Phenomena	269
10.1 Classical Theory	269
10.2 Critical Exponents	270
10.3 Scaling Hypothesis	273
10.4 Correlation Length and Universality	275
10.5 Renormalization Group (RG) Idea	278
10.6 Critical Exponents and the Flory Exponent	278
10.7 RG-Calculation of the Flory Exponent	280
10.7.1 RG-Transformations	280
10.7.2 Fixed-Points of the RG	281
10.7.3 Non-classical Flory Exponent	282
10.7.4 Critical Dimension	283
10.7.5 ε -Expansion	283
10.7.6 Differential RG-Equations	284
10.7.7 Stability of the Fixed Points	286
10.7.8 Numerical Value of the Flory Exponent	287
10.8 Numerical Values of the Critical Exponents	288
References	289
11 Interfaces	291
11.1 Non-uniform Systems	292
11.2 Density Profile	294
11.3 Pressure Profile	298
11.4 Surface Tension	303
References	306
12 Topological Defects	307
12.1 Frustration	308
12.2 Elastic Deformations	309
12.3 Schlieren Texture	310
References	313
13 Phase Transformation Kinetics	315
13.1 Homogeneous Nucleation	315
13.1.1 Becker–Döring Theory	316
13.1.2 Zeldovich–Frenkel Theory	322
13.1.3 Avrami Theory	327
13.2 Heterogeneous Nucleation	328
13.3 Spinodal Decomposition	330
13.4 Glass Transition	332
References	334

Part V Appendices

A	Legendre Transformations	337
A.1	Case of One Variable	337
A.2	Case of n Variables	340
A.2.1	Some Examples	341
	Reference	342
B	Random Variables	343
B.1	One-Dimensional Random Variable	343
B.1.1	Some Examples	344
B.2	Approximation Methods	345
B.3	n -Dimensional Random Variable	346
	Reference	349
C	Functional and Functional Derivative	351
C.1	Definition of a Functional	351
C.2	The Functional Derivative	351
C.3	Some Examples	352
	References	354
D	A Quasicrystalline Lattice	355
D.1	Forbidden Symmetries of Periodic 2D Lattices	355
D.2	A Quasiperiodic 2D Lattice	356
	References	358
	Index	359
