

Contents

- 1 Introduction1**
- 2 Gas Phase Synthesis.....7**
 - 2.1 Background8
 - 2.1.1 Chemical Vapor Synthesis8
 - 2.1.2 Silicon Carbide 11
 - 2.2 Experimental Methodology 12
 - 2.3 Experimental Results for Silicon Carbide..... 18
 - 2.3.1 Particle Size and Morphology 18
 - 2.3.2 Crystalline Phase, Grain Size and Crystallinity21
 - 2.3.3 Surface Area, Agglomerate Size and Morphology24
 - 2.3.4 Influence of Decomposition Temperature30
 - 2.3.5 Influence of Total Pressure30
 - 2.3.6 Influence of Precursor Partial Pressure32
 - 2.3.7 Influence of Reactor Length33
 - 2.4 Summary33
- 3 Modeling Particle Formation and Growth.....35**
 - 3.1 Background36
 - 3.2 Basic Physical Chemistry and Chemical Engineering Relations38
 - 3.2.1 Gas Kinetics39
 - 3.2.2 Chemical Reaction Kinetics40
 - 3.2.3 Hydrodynamics42
 - 3.2.4 Heat Transfer and Production.....43
 - 3.3 Reaction-Coagulation-Sintering Model45
 - 3.3.1 Particle Formation.....47
 - 3.3.2 Coagulation and Sintering47
 - 3.3.3 Heat Balance50
 - 3.3.4 Numerical Implementation51
 - 3.4 Results of Numerical Simulations.....54
 - 3.4.1 Time-Temperature-Profile54

3.4.2 Evolution of Particle Sizes and Specific Surface Area	56
3.4.3 Evolution of Number Densities	59
3.4.4 Characteristic Times	59
3.4.5 Gas Kinetic Parameters	62
3.4.6 Chemical Engineering Parameters	64
3.5 Comparison of Numerical Simulations and Experimental Results	65
3.5.1 Dependence on Reactor Temperature	66
3.5.2 Dependence on Reactor Length	70
3.5.3 Dependence on Reactor Diameter	70
3.5.4 Dependence on Precursor Partial Pressure	72
3.5.5 Dependence on Process Pressure	73
3.5.6 Dependence on the Shape of the Temperature Profile	73
3.5.7 Predicting Power	77
3.5.8 Considerations for Scale up	78
3.5.9 Crystallinity	81
3.5.10 From Films to Particles	84
3.6 Summary	87
4 Processing and Microstructure	91
4.1 Background	92
4.1.1 Microstructure in Nanocrystalline Materials	92
4.1.2 Sintering	93
4.1.3 Zirconia Based Ceramics	96
4.2 Experimental Methodology	98
4.2.1 Powder Characterization	98
4.2.2 Compaction and Sintering	99
4.2.3 Pellet Characterization	99
4.2.4 Zeta-potential and Particle Size Distribution in Aqueous Dispersion	100
4.3 Pure Zirconia	100
4.3.1 Powder Characterization	100
4.3.2 Compaction Behavior	105
4.3.3 Sintering	106
4.4 Zirconia Doped with Alumina	114
4.4.1 Compaction Behavior and Microstructure of Green Bodies	115
4.4.2 Sintering Behavior and Microstructural Evolution	120
4.4.3 Alumina as Grain Growth Inhibitor	126
4.5 Zirconia Coated with Alumina	128
4.5.1 Characteristics of Powders	129
4.5.2 Characteristics of Aqueous Dispersions	132

4.5.3 Compaction and Sintering Behavior	133
4.5.4 The Function of the Al_2O_3 Coating on ZrO_2	135
4.6 Zirconia Doped with Yttria	140
4.6.1 Powder Characterization	140
4.6.2 Sintering Behaviour	141
4.7 Summary	145
5 Local Structure and Long Range Order.....	147
5.1 Background	148
5.1.1 Nanocrystalline Materials - Heterogeneous Disorder.....	148
5.1.2 Diffraction	148
5.1.3 Spectroscopy	149
5.1.4 Zirconia.....	152
5.2 Methodology of Data Analysis and Experimental Procedures	156
5.2.1 Scattering, Structure Factor and Partial Pair Distribution Functions ..	156
5.2.2 Powder Diffraction and Rietveld Analysis	159
5.2.3 EXAFS Spectroscopy and Analysis by Reverse Monte Carlo Modeling.....	161
5.2.4 Experimental Procedures	169
5.3 Crystalline and Amorphous Zirconia	170
5.3.1. Monoclinic Zirconia.....	170
5.3.2 Amorphous Zirconia	175
5.4 Scattering and EXAFS Spectroscopy of monoclinic Zirconia.....	181
5.5 Pure Nanocrystalline Zirconia Powder	187
5.5.1 Structure as a Function of Synthesis Temperature	188
5.5.2 Local Structure in Nanocrystalline Tetragonal Zirconia Powder.....	194
5.6 Nanocrystalline Zirconia Doped with Alumina.....	198
5.6.1 Zirconia Doped with 5 mol% Alumina	199
5.6.2 Zirconia Doped with 30 mol% Alumina	206
5.7 Nanocrystalline Zirconia Doped with Yttria	216
5.7.1 X-Ray Diffraction	216
5.7.2 XAFS Spectroscopy	218
5.8 Summary	225
6 Conclusions and Perspectives.....	227
7 References	233
8 Index	251
