<i>Preface</i>	ix
<i>Acknowledgements</i>	x
<i>Scientific Committee</i>	xi
<i>Opening address by the University Chancellor Stig Hagström</i>	xii
<i>Participants of the International Symposium at the Wenner-Gren Center, Stockholm</i>	xiv

Part I CNS pathways, single unit, neural population and structural correlates of the accommodative system

L. E. Mays and P. D. R. Gamlin: <i>Neuronal circuits for accommodation and vergence in the primate</i>	1
J.W. Gnadt: <i>Neural codes for three-dimensional space</i>	11
K. Ohtsuka and A. Sato: <i>Neuronal connectivity between the accommodative and active fixation systems</i>	21
J. T. Erichsen, W. Hodos and C. Evinger: <i>The pupillary light reflex, accommodation and convergence: Comparative considerations</i>	31
T. Bando, N. Hara, M. Takagi, H. Hasebe and H. Toda: <i>Vergence eye movement and lens accommodation: Cortical processing and neuronal pathway</i>	43
T. Takeda, H. Endo and K. Hashimoto: <i>Research on dynamic accommodation using TDO III (Three Dimensional Optometer III) and MEG (Magnetoencephalography)</i>	51
H. Richter, J. T. Lee and J. V. Pardo: <i>Neuroanatomical correlates of the near response: Voluntary modulation of accommodation in the human visual system</i>	67
J. V. Pardo, S. R. Sponheim, P. Costello, J. T. Lee, Y. Han and H. Richter: <i>Functional neuroanatomy of the human near/far response of the visual system to blur cues: Fixation to point targets at different viewing distances</i>	79

O. Franzén, G. Lennerstrand, J. Pardo and H. Richter: <i>Spatial contrast sensitivity and visual accommodation studied with VEP (Visual Evoked Potential), PET (Positron Emission Tomography) and psychophysical techniques</i>	91
---	----

Part II Autonomic nervous system, microfluctuations and resting state of accommodation

W. N. Charman: <i>Accommodation and the through-focus changes of the retinal image</i>	115
B. Winn: <i>Accommodative microfluctuations: A mechanism for steady-state control of accommodation</i>	129
B. Gilmartin: <i>Pharmacology of accommodative adaptation</i>	141
R. A. Tyrrell, M. A. Pearson and J. F. Thayer: <i>Behavioral links between the oculomotor and cardiovascular systems</i>	151

Part III Developmental/functional aspects of accommodation

L. Hainline: <i>Development of accommodation and vergence in infancy</i>	161
R. Held and J. Gwiazda: <i>The accommodative response to blur in myopic children</i>	171
N. A. McBrien: <i>The role of muscarinic antagonists in the control of eye growth and myopia</i>	183
K. J. Ciuffreda, M. Rosenfield, J. Mordi and Hai-Wen Chen: <i>Accommodation, age and presbyopia</i>	193
P.B. Kruger, S. Mathews, K. R. Aggarwala, L. Stark, S. Bean, J. Lee and S. Cohen: <i>Chromatic stimulus for accommodation to stationary and moving targets</i>	201
T. Yamada, K. Ukai and S. Ishikawa: <i>Error signal detection and dynamics of accommodation</i>	213
L. W. Stark, C. Neveu and V. V. Krishnan: <i>Mode switching in control of accommodation</i>	225
B.C. Jiang: <i>A modified control model for steady-state accommodation</i>	235
L. Marran and C. M. Schor: <i>Binocular accommodation</i>	245

Part IV Health and clinical aspects of accommodation/vergence

J. Ygge: <i>Vertical vergence – normal function and plasticity</i>	257
D. A. Owens, J. T. Andre and R. L. Owens: <i>Predicting accommodative performance in difficult conditions: a behavioral analysis of normal variations of accommodation</i>	273
S. E. Morse, J. C. Kotulak and J. C. Rabin: <i>The influence of oculomotor function on the optical correction for night myopia</i>	285
H. Ying and G. Lennerstrand: <i>Effects of neck muscles proprioception on eye position and vergence movements</i>	293
I. Lie, R. Watten and K. I. Fostervold: <i>Accommodation/vergence/fixation disparity and synergism of head, neck and shoulders</i>	303
K. Ukai, H. Oyamada and S. Ishikawa: <i>Changes in accommodation and vergence following 2 hours movie viewing through bi-ocular head-mounted display</i>	313
S. Ishikawa, K. Tsuchiya, N. Otsuka, T. Namba and K. Ukai: <i>Development of myopia due to environmental problems. A possible interaction of anti-cholinesterase compounds examined by accommodative adaptation</i>	327

Epilogue

B. Piccoli: <i>Nearwork and visual well-being: A possible contribution of neuroscience</i>	341
