Preface to the Second Edition	vii
Preface to the First Edition	ix
List of Symbols	xvii
CHAPTER 1	
Overview and Basic Concepts	1
1.1. An Introductory Note	1
*1.2. Transformation Theory of Mechanics	7
*1.2a. Canonical Transformations	7
*1.2b. Motion in Phase Space	12
*1.2c. Action-Angle Variables	21
1.3. Integrable Systems	24
*1.3a. One Degree of Freedom	25
1.3b. Linear Differential Equations	29
1.3c. More than One Degree of Freedom	32
1.3d. Noncanonical Variables and Reduction	44
*1.4. Near-Integrable Systems	48
*1.4a. Two Degrees of Freedom	48
*1.4b. More than Two Degrees of Freedom	60
1.5. Dissipative Systems	62
1.5a. Strange Attractors	63
1.5b. The Lorenz System	65
CHAPTER 2	
Canonical Perturbation Theory	70
2.1. Introduction	70
2.1a. Power Series	73
2.1b. Asymptotic Series and Small Denominators	75
2.1c. The Effect of Resonances	77
*2.2. Classical Perturbation Theory	78
*2.2a. One Degree of Freedom	78
*2.2b. Two or More Degrees of Freedom	83
	xi

2.3. Adiabatic Invariance	93
*2.3a. Introduction and Basic Concepts	93
*2.3b. Canonical Adiabatic Theory	96
*2.3c. Slowly Varying Harmonic Oscillator	100
2.3d. Noncanonical Methods	102
2.4. Secular Perturbation Theory	109
*2.4a. Removal of Resonances	110
*2.4b. Higher-Order Resonances	117
*2.4c. Resonant Wave-Particle Interaction	122
2.4d. Global Removal of Resonances	128
2.5. Lie Transformation Methods	133
2.5a. General Theory	135
2.5b. Deprit Perturbation Series	136
2.5c. Adiabatic Invariants	141
2.6. Superconvergent Methods	149
2.6a. Kolmogorov's Technique	152
2.6b. Singly Periodic Orbits	154
 CHAPTER 3	
Mappings and Linear Stability	162
*3.1. Hamiltonian Systems as Canonical Mappings	164
*3.1a. Integrable Systems	164
*3.1b. Near-Integrable Systems	167
*3.1c. Hamiltonian Forms and Mappings	169
*3.2. Generic Behavior of Canonical Mappings	174
*3.2a. Irrational Winding Numbers and KAM Stability	174
*3.2b. Rational Winding Numbers and Their Structure	183
*3.2c. Complete Description of a Nonlinear Mapping	188
*3.2d. Numerical Examples	191
3.3. Linearized Motion	195
*3.3a. Eigenvalues and Eigenvectors of a Matrix	196
*3.3b. Two-Dimensional Mappings	200
3.3c. Linear Stability in Higher Dimensions	208
3.3d. General Stability Concepts	210
*3.4. Mapping Models	215
*3.4a. Physical Problems and Models	216
*3.4b. Numerical Results	220
*3.4c. Fixed Points and Linear Stability	223
*3.4d. Bifurcation Phenomena	226
*3.4e. Hamiltonian Formulation	229
*3.5. The Separatrix Motion	231
*3.5a. Driven One-Dimensional Pendulum	231
*3.5b. The Separatrix Mapping	236
3.6. Mappings from Perturbed Linear Oscillators	237
3.6a. Tiling of the Phase Space	238
3.6b. Phase Space Structure	241

CHAPTER 4

Transition to Global Stochasticity	245
*4.1. Introduction	245
*4.1a. Qualitative Description of Criteria	247
*4.1b. The Standard Mapping	250
*4.2. Resonance Overlap	258
*4.2a. Rationale for Criteria	258
*4.2b. Calculation of Overlap Criteria	259
4.3. Growth of Second-Order Islands	264
4.3a. Elliptic Fixed Points	265
4.3b. The Separatrix	268
*4.4. Stability of High-Order Fixed Points	271
*4.4a. The Basic Elements of Greene's Method	271
*4.4b. Numerical Evaluation	276
4.5. Renormalization for Two Resonances	281
4.6. Nonexistence of Invariant Curves	289
*4.7. Summary and Conclusions	291

CHAPTER 5

Stochastic Motion and Diffusion	293
5.1. Introduction	293
5.2. Definitions and Basic Concepts	294
*5.2a. Ergodicity	294
*5.2b. Liapunov Characteristic Exponents	296
5.2c. Concepts of Stochasticity	302
5.2d. Randomness and Numerical Errors	309
5.3. Determination of Liapunov Exponents and KS Entropy	312
5.3a. Analytical Estimates	314
*5.3b. Numerical Methods	315
*5.4. Diffusion in Action Space	320
*5.4a. The Fokker-Planck Equation	321
*5.4b. Transport Coefficients	324
*5.4c. Steady-State and Transient Solutions	326
5.5. The Effects of Correlations	328
5.5a. Higher-Order Transport Corrections	328
5.5b. Diffusion near Critical K	339
5.5c. Long-Time Correlations and Averaging	342
5.5d. Quasiaccelerator Modes	345
5.6. The Effect of Extrinsic Stochastic Forces	349
5.6a. Introduction	349
5.6b. Diffusion in the Presence of Resonances	353
5.6c. Diffusion on Two Space and Time Scales	357
5.7. Slow Separatrix Crossings	363

CHAPTER 6

Three or More Degrees of Freedom	373
*6.1. Resonance in Multidimensional Oscillations	373
*6.1a. Geometric Relations	374
*6.1b. Examples of Arnold Diffusion	380
6.2. Diffusion Rates Along Resonances	386
*6.2a. Stochastic Pump Diffusion Calculation	387
6.2b. Coupling Resonance Diffusion	393
6.2c. Many Resonance Diffusion	397
6.2d. Modulational Diffusion	399
6.3. Extrinsic Diffusion	406
6.3a. Resonance Streaming	406
6.3b. Diffusion of a Parameter	413
6.4. Diffusion in Toroidal Magnetic Fields	418
6.4a. Magnetic Islands	418
6.4b. Drift Surfaces and Diffusion in Static Fields	425
6.4c. Time-Varying Fields	428
6.4d. The Self-Consistent Problem	436
6.5. Many Degrees of Freedom	437
6.5a. Strongly Nonlinear Coupled Systems	440
6.5b. The Fermi–Pasta–Ulam Model and the Korteweg–de Vries Equation	443
6.5c. Discretized Sine–Gordon Equation	450

CHAPTER 7

Bifurcation Phenomena and Transition to Chaos in Dissipative Systems	457
7.1. Simple and Strange Attractors	457
7.1a. Basic Properties	458
7.1b. Simple Attractors and Their Bifurcations	461
7.1c. Examples of Strange Attractors	468
7.1d. Geometric Properties of Strange Attractors	474
7.2. One-Dimensional Noninvertible Maps	478
7.2a. Basic Properties	478
7.2b. Periodic Behavior	482
7.2c. Chaotic Motion	497
7.3. Bifurcation Phenomena in Two-Dimensional Maps	508
7.3a. Dissipative Maps	509
7.3b. Area-Preserving Maps	512
7.3c. Transition Between Hamiltonian and Dissipative Chaos	519
7.4. Circle Maps	525
7.4a. Basic Formalism	526
7.4b. Critical Behavior and Universality	529
7.4c. Supercritical Behavior	532
7.4d. Physical Examples	534
7.5. Intermittency	537
7.5a. Intermittency Mechanisms	538
7.5b. Renormalization-Group Analysis	542

7.5c. Power Spectra and Experimental Results	545
7.6. Crises and Basin Boundaries	548
7.6a. Crises	549
7.6b. Fractal Basin Boundaries	557
7.7. Determination of Homoclinic Intersection	560
 CHAPTER 8	
Chaotic Motion in Dissipative Systems	570
8.1. Transient Chaos	570
8.1a. Weak Dissipation	571
8.1b. Transient Chaos Near a Crisis	579
8.2. Invariant Distributions on Strange Attractors	580
8.2a. Reduction to a One-Dimensional Map	581
8.2b. Direct Iteration of an Initial Distribution	583
8.3. Multifractals and Their Properties	588
8.3a. Generalized Dimensions	588
8.3b. Scaling Index Spectrum	592
8.4. Reconstructing Dynamics	597
8.4a. Delay Coordinates and Embedding Dimension	598
8.4b. Statistical Quantities	602
8.4c. Short-Time Prediction	604
8.5. Spatio-Temporal Dynamics	613
8.5a. Maps on a Lattice	613
8.5b. Self-Organized Criticality	620
8.6. The Fluid Limit	628
8.6a. Fourier Mode Expansions	630
8.6b. The Transition to Turbulence	634
8.6c. Hamiltonian Chaos in Fluids	638
 APPENDIX A	
Applications	644
A.1. Planetary Motion	644
A.2. Accelerators and Beams	646
A.3. Charged Particle Confinement	648
A.4. Charged Particle Heating	650
A.5. Chemical Dynamics	651
A.6. Quantum Systems	653
 Bibliography	655
Author Index	671
Subject Index	679
