Preface — V

Acknowledgements — VII

1 Brief overview of body parts and functions — 1

- 1.1 Introduction — 1
- 1.2 Overview — 2
 - 1.2.1 Cell — 2
 - 1.2.2 Circulation — 3
 - 1.2.3 Heart — 4
 - 1.2.4 Kidneys — 5
 - 1.2.5 Respiratory system — 5
 - 1.2.6 Digestive system — 7
 - 1.2.7 Sensory organs — 8
 - 1.2.8 Nervous system — 9
 - 1.2.9 Locomotor system — 10
 - 1.2.10 Skin — 11
 - 1.2.11 Reproductive system — 11
- 1.3 Summary — 12
 - Suggestion for home experiments — 15
 - Exercises — 15
 - References — 15
 - Further reading — 16
 - Literature of general interest — 16
 - Useful websites — 17

2 Body mechanics and muscles — 18

- 2.1 Basic mechanical terms — 18
 - 2.1.1 Body density — 19
 - 2.1.2 Symmetry planes — 21
 - 2.1.3 Center of gravity — 22
- 2.2 Body mechanics — 23
 - 2.2.1 Mechanical models — 23
 - 2.2.2 Levers — 26
 - 2.2.3 Mechanical stability — 28
 - 2.2.4 Femur — 29
 - 2.2.5 Degrees of freedom — 30
 - 2.2.6 Biomechanics of walking — 32
- 2.3 Skeletal muscles — 33
 - 2.3.1 Structure of skeletal muscles — 33

2.3.2	Hierarchical organization — 35
2.3.3	Muscle contraction — 36
2.3.4	Muscle tension — 39
2.3.5	Muscle activation — 41
2.3.6	Coordination and feedback — 44
2.4	Summary — 44
	Suggestions for home experiments — 46
	Exercises — 46
	References — 47
	Further reading — 48
3	Elastomechanics: beams, bones, and fractures — 49
3.1	Introduction — 49
3.2	Elastic deformation — 49
3.2.1	Strain and stress — 49
3.2.2	Hooke's law — 50
3.2.3	Shear deformation — 52
3.3	Elastic properties of beams — 53
3.4	Plastic deformation and fracture — 55
3.5	Viscoelastic materials — 57
3.6	Structure of bones — 60
3.6.1	Hierarchical structure of bones — 60
3.6.2	Cellular structure of bones — 63
3.7	Elastic and plastic properties of bones — 65
3.7.1	Macroscopic level — 66
3.7.2	Microscopic level — 69
3.8	Summary — 71
	Suggestions for home experiments — 73
	Exercises — 74
	References — 74
	Further reading — 75
	Useful website — 75
4	Energy household of the body — 76
4.1	The body as a thermodynamic machine — 76
4.2	Metabolism — 77
4.3	Caloric oxygen equivalent — 79
4.4	Respiratory exchange ratio — 81
4.5	Basal metabolic rate — 82
4.6	Oxygen uptake — 83
4.7	Efficiency of physical work — 86
4.8	Metabolic heat production — 86

4.9	Heat losses of the body — 88
4.9.1	Heat conduction — 88
4.9.2	Heat radiation — 90
4.9.3	Convection — 91
4.9.4	Sweating and shivering — 92
4.9.5	Equilibrium condition — 93
4.10	Summary — 94
	Suggestions for home experiments — 96
	Exercises — 96
	References — 97
	Further reading — 97
5	Resting potential and action potential — 99
5.1	Introduction — 99
5.2	Cell membrane and ion channels — 100
5.3	Resting potential — 102
5.4	Action potential — 106
5.5	Electrochemical properties of cells — 108
5.5.1	Membrane capacitance — 108
5.5.2	Transmembrane ion exchange — 109
5.5.3	Transmembrane resistance — 110
5.5.4	Depolarization time constant — 110
5.5.5	Electrochemical potential — 111
5.5.6	Hodgkin–Huxley model — 112
5.6	Single channel conductance — 114
5.7	ATP-powered Na^+ – K^+ pump — 118
5.8	Summary — 120
	Suggestions for home experiments — 122
	Exercises — 122
	References — 123
	Further reading — 124
6	Signal transmission in neurons — 125
6.1	Introduction — 125
6.2	Overview on signal transmission — 126
6.2.1	Components of neurons — 126
6.2.2	Afferent and efferent neurons — 128
6.2.3	Unipolar and multipolar neurons — 129
6.3	Sensory receptor potential — 130
6.4	Signal transduction — 133
6.5	Saltatory polarization current — 135
6.6	Electrochemical properties of axons — 137

6.6.1	Transmembrane capacitance —	137
6.6.2	Resistance and time constant —	138
6.6.3	Decay length of action potential —	139
6.6.4	Propagation velocity of action potentials —	142
6.6.5	Experimental test of propagation velocity —	143
6.7	Communication across axons —	143
6.8	Neuromuscular junction – triggering muscle contraction —	146
6.9	Electric and magnetic signals from the body —	149
6.9.1	Electromyography (EMG) —	149
6.9.2	Electroencephalography (EEG) —	151
6.9.3	Magnetoencephalography (MEG) —	153
6.10	Summary —	154
	Suggestions for home experiments —	155
	Exercises —	156
	References —	156
	Further reading —	157
7	Electrophysical aspects of the heart —	158
7.1	Introduction —	158
7.2	Cardiac action potential —	158
7.2.1	Temporal evolution —	158
7.2.2	Spatial evolution —	160
7.3	Electric polarization of the heart —	162
7.3.1	Transmembrane potential —	162
7.3.2	Dipole looping —	164
7.3.3	Isopotential lines —	165
7.4	Einthoven triangle —	166
7.4.1	Coordinate system —	166
7.4.2	Heart vector —	168
7.5	Electrocardiogram —	170
7.5.1	Einthoven leads —	170
7.5.2	Goldberger leads —	172
7.5.3	Wilson leads —	174
7.6	Electrocardiography —	176
7.6.1	Procedures —	176
7.6.2	New developments —	177
7.7	Magnetocardiography —	178
7.8	Artificial pacemaker —	179
7.9	Summary —	181
	Suggestions of home experiments —	183

Exercises —	183
References —	183
Further reading —	184

8	The physical aspects of the circulatory system —	185
8.1	Introduction —	186
8.2	Two circuits —	187
8.3	The heart as a pump —	188
8.3.1	Four phases —	188
8.3.2	Stroke volume —	190
8.3.3	Energy, power, and efficiency —	192
8.4	Hemostatics of the systemic circuit —	195
8.4.1	Hemostatic pressures —	195
8.4.2	Elastic properties of blood vessels —	197
8.5	Hemodynamics of the systemic circuit —	200
8.5.1	Basic equations and assumptions —	200
8.5.2	Pulsatile flow —	202
8.5.3	Perfusion and flow resistance —	204
8.5.4	Total peripheral flow resistance —	205
8.5.5	Turbulent flow and Windkessel function —	206
8.5.6	Mathematically modeling —	207
8.5.7	Flow velocity and pulse wave velocity —	209
8.5.8	Methods for determining PWV —	212
8.6	Physical properties of blood —	214
8.6.1	Composition of blood —	214
8.6.2	Viscosity of blood —	216
8.6.3	Osmotic pressure —	219
8.7	Blood as an oxygen carrier —	221
8.7.1	Structure of hemoglobin —	222
8.7.2	Saturation curve —	223
8.7.3	Ferritin —	226
8.7.4	Light absorbance —	228
8.8	Cardiopulmonary bypass intervention —	231
8.8.1	Cardiopulmonary bypass —	231
8.8.2	Oxygenator —	233
8.9	Summary —	235
	Suggestions for home experiments —	237
	Exercises —	237
	References —	239
	Further reading —	240

9	Physical aspects of the respiratory system — 241
9.1	Introduction — 241
9.2	Organs of the respiratory system (overview) — 242
9.3	Gas exchange — 244
9.3.1	Partial pressures of the atmosphere — 245
9.3.2	Alveolar pressures — 246
9.3.3	Solubility of gases in water — 247
9.3.4	Solubility of oxygen in blood — 248
9.3.5	Carbon dioxide transport in blood — 249
9.3.6	Gas exchange in the alveoli — 250
9.3.7	Respiratory coefficient and exchange rate — 253
9.4	Tidal volume and vital capacity — 254
9.4.1	Inspiratory and expiratory air volumes — 254
9.4.2	Inspirational oxygen flow and cardiac output — 257
9.5	Pulmonary volume and pressure changes — 258
9.6	Volume work, compliance, and surface tension — 261
9.6.1	Volume work — 261
9.6.2	Compliance — 262
9.6.3	Surface tension — 265
9.7	Airway resistance — 268
9.7.1	Total airway resistance — 268
9.7.2	Turbulent flow — 269
9.7.3	Time constant — 270
9.8	Lung ventilators and oxygen generators — 271
9.8.1	Invasive and noninvasive ventilators — 272
9.8.2	Oxygen generators — 275
9.9	Summary — 279
	Suggestions for home experiments — 281
	Exercises — 281
	References — 282
	Further reading — 283
10	Physical aspects of the urinary system — 284
10.1	Introduction — 284
10.2	Global properties of kidneys — 285
10.3	Structure of kidneys — 287
10.4	Filtration — 288
10.5	Reabsorption — 292
10.6	Renal clearance — 295
10.6.1	Renal clearance fundamentals — 295
10.6.2	Case studies of renal clearance — 298
10.6.3	Creatinine clearance — 301

10.6.4	Urinary excretion —	302
10.7	Artificial filtering: Hemodialysis —	304
10.8	Bladder, urethra, and urination —	307
10.8.1	Structure and function —	307
10.8.2	Neural control —	308
10.8.3	Urostatics and urodynamics —	309
10.9	Summary —	312
	Suggestion for home experiments —	313
	Exercises —	314
	References —	314
	Further Reading —	315
11	Physical aspects of vision —	316
11.1	Introduction —	316
11.2	Anatomical aspects of the eye —	317
11.3	The dioptric eye —	319
11.3.1	The refractive power of the eye —	319
11.3.2	Accommodation —	323
11.3.3	Resolving power —	324
11.3.4	Visual acuity —	326
11.3.5	Lens aberrations —	327
11.3.6	Intraocular pressure —	331
11.3.7	The visual field —	332
11.4	Photoreception —	334
11.4.1	Structure of the retina —	334
11.4.2	Sensitivity and adaptation —	339
11.5	Phototransduction —	342
11.5.1	Visual pigment rhodopsin —	342
11.5.2	Photoisomerization —	344
11.5.3	Three cycles to control receptor potential —	345
11.5.4	Phototransduction: from photoreceptors to ganglion cells —	348
11.6	Retinal signal processing —	350
11.6.1	On-off bipolar cells —	350
11.6.2	Receptive field —	355
11.6.3	Lateral inhibition —	357
11.7	Optic pathway —	359
11.7.1	The optic nerve —	359
11.7.2	Lateral geniculate nucleus and primary visual cortex —	360
11.7.3	Binocular vision —	362
11.8	Color perception —	363
11.8.1	Tricolor and four-color systems —	363
11.8.2	Additive and subtractive color mixture —	367

11.9	Summary — 368
	Suggestions for home experiments — 370
	Exercises — 370
	References — 372
	Further reading — 374
12	Sound, sound perception, and balance — 375
12.1	Introduction — 375
12.2	Sound waves — 376
12.2.1	Acoustic impedance — 376
12.2.2	Crossing borders — 379
12.2.3	Sound intensity and loudness — 382
12.3	Outer and middle ear — 386
12.3.1	Outer ear — 386
12.4	Sound detection in the inner ear — 390
12.4.1	Structure of the cochlea — 390
12.4.2	Elastic properties of the cochlea — 393
12.4.3	Organ of Corti — 394
12.4.4	Inner and outer hair cells — 396
12.4.5	Mechanoelectric transduction — 398
12.4.6	Frequency coding — 401
12.4.7	Selectivity, sensitivity, latency, and adaptation — 403
12.4.8	Pathway to the auditory cortex — 405
12.4.9	Sound localization — 407
12.5	From sound generation to hearing loss — 409
12.5.1	Tone, sound, and noise — 409
12.5.2	Hearing loss — 411
12.5.3	Hearing devices — 412
12.5.4	The making of sound — 416
12.6	Organ of equilibrium — 418
12.7	Summary — 421
	Suggestions for home experiments — 424
	Exercises — 425
	References — 425
	Further reading — 427
13	Prosthetics — 428
13.1	Introduction — 428
13.2	Exoprostheses — 428
13.2.1	Lower limb prostheses — 429
13.2.2	Upper limb prostheses — 432
13.3	Hip replacement — 435

- 13.3.1 Anatomical basics — 435
- 13.3.2 Replacement procedures — 437
- 13.3.3 Material considerations — 437
- 13.3.4 Alternative approaches — 442
- 13.4 Knee replacement — 443
- 13.5 Cardiovascular stents — 445
- 13.6 Retinal implants — 448
- 13.6.1 Epiretinal microelectrode array — 449
- 13.6.2 Subretinal micro-photodiode array — 450
- 13.7 Summary — 452
- Suggestions for home experiments — 453
- Exercises — 454
- References — 454
- Useful website — 456

Appendix

- 14 Answers to questions — 459
- 15 Solutions to exercises — 473
- 16 List of acronyms (used in all three volumes) — 497
- 17 Selection of fundamental physical constants, conversions, and relationships — 500
- 18 List of scientists named in this volume — 501
- 19 Glossary — 503
- 20 Index of terms — 506
