

Table of contents

SUMMARY	I
ZUSAMMENFASSUNG	III
LIST OF FIGURES.....	VIII
LIST OF TABLES	X
LIST OF ABBREVIATIONS.....	XI
1 INTRODUCTION	1
1.1 Structure and molecular characteristics of the APOE protein.....	1
1.1.1 Protein structure and expression.....	1
1.1.1.1 Structural differences between the APOE isoforms.....	1
1.1.1.2 APOE expression in the periphery and in the brain.....	2
1.1.2 Functions of APOE	3
1.1.2.1 Lipid metabolism.....	3
1.1.2.2 APOE in disease pathology and immune function	4
1.1.2.3 APOE – Interaction with nutritional factors and energy metabolism	5
1.1.2.4 APOE as a transcriptional regulator.....	7
1.2 Cellular localization of APOE	8
1.2.1 APOE and its potential role in the mitochondrion	10
1.2.1.1 Mitochondrial localization of APOE	10
1.2.1.2 Effects of APOE on mitochondrial function and dynamics.....	10
1.2.2 Role of APOE in mitochondria-associated ER membranes.....	16
1.2.2.1 Proteome of mitochondria-associated ER membranes and function of mitochondria-ER contacts..	16
1.2.2.2 APOE in mitochondria-associated ER membranes	18
1.3 Protein–protein interactions	22
1.3.1 Characteristics of protein–protein interactions.....	22
1.3.2 APOE protein–protein interactions.....	23
1.4 Genetic and epigenetic aspects of APOE	30
1.4.1 The APOE gene and its different genotypes	30
1.4.2 Epigenetic regulation of APOE.....	30
1.4.2.1 DNA methylation.....	30
1.4.2.2 Methylation landscape in the human APOE gene	31
1.4.2.3 Methyl-binding domain proteins	34
1.5 Aims of the study	36
2 MATERIAL AND METHODS	37
2.1 Chemicals, kits and buffers.....	37
2.2 Tissues and cells studied.....	45
2.2.1 Culture of human hepatoma cells.....	45

2.2.1.1 Plasmid construction and transformation	45
2.2.1.2 Transient transfection	46
2.2.1.3 Further treatments in APOE-transfected cells	46
2.2.2 Mouse studies	46
2.3 DNA and RNA isolation	47
2.3.1 DNA isolation	47
2.3.2 RNA isolation	48
2.4 Polymerase chain reaction	48
2.4.1 Quantitative reverse transcriptase PCR	48
2.4.2 DNA gel electrophoresis	49
2.5 Chromatin immunoprecipitation	49
2.6 Methylation analysis	50
2.7 Western blotting	51
2.7.1 Sample preparation	51
2.7.2 Immunoblotting	51
2.8 Co-immunoprecipitation	52
2.8.1 Co-immunoprecipitation proteomic analysis	53
2.8.2 Co-immunoprecipitation Western blot analysis	53
2.9 BCKD enzyme activity assay	53
2.10 Quantification of plasma amino acid concentrations	55
2.11 Measurement of hepatic ATP levels	56
2.12 Isolation of mitochondria-associated ER membranes and mitochondria ...	56
2.12.1 Isolation of mitochondria-associated ER membranes and mitochondria from Huh7 cells	56
2.12.2 Isolation of crude mitochondria from C75BL/6 mice	58
2.13 Immunostaining	58
2.13.1 Mitochondrial and protein staining	58
2.13.2 Proximity ligation assay	59
2.14 Statistical analysis	62
3 RESULTS	63
3.1 APOE interacts with mitochondrial proteins	63
3.1.1 APOE co-immunoprecipitation studies identified a large number of proteins potentially associated with APOE	63
3.1.2 APOE protein-protein interactions in Huh7 cells	66
3.1.2.1 APOE co-immunoprecipitation Western blot in APOE-transfected Huh7 cells	66
3.1.2.2 Proximity ligation assay in APOE-transfected Huh7 cells	67
3.1.2.3 Effect of APOE on BCKDHA phosphorylation in HepG2 cells	69

3.2 Biological relevance of APOE protein–protein interactions in vivo in liver of APOE TR mice	71
3.2.1 APOE co-immunoprecipitation Western blot in the liver of dietary restricted or <i>ad libitum</i> fed APOE TR mice	71
3.2.2 Hepatic BCKD complex activity is increased in <i>ad libitum</i> fed APOE4 mice	73
3.2.3 Plasma branched-chain amino acid level	76
3.2.4 mTOR pathway	77
3.2.5 Dietary restriction leads to lower ATP levels and does not affect AMPK phosphorylation	77
3.3 APOE is present in mitochondria-associated ER membranes	80
3.3.1 APOE accumulates in mitochondria-associated ER membrane fractions from Huh7 cells	80
3.3.2 APOE accumulates <i>in vivo</i> in crude mitochondrial fractions in the liver of C57BL/6 mice	82
3.3.3 Composition mitochondria-associated ER membranes in liver of APOE TR mice is not affected by APOE isoform	82
3.3.4 The APOE isoform does not affect mitochondria-ER contacts in Huh7 cells	84
3.4 APOE alleles are differentially methylated and MECP2 binds to APOE DNA	86
3.4.1 The APOE allelic variants are differentially methylated at the SNP sites	86
3.4.2 MECP2 is associated with APOE chromatin fragments	88
4 DISCUSSION	90
4.1 Importance of the interaction of APOE with mitochondrial proteins	90
4.1.1 The role of the BCKDHA–APOE interaction in energy metabolism	90
4.1.2 Significance of the interaction of APOE with VDAC1 and ATP5B in mitochondrial metabolism	94
4.2 Potential functions of APOE in mitochondria-associated ER membranes and mitochondria	98
4.3 Relevance of DNA methylation and MECP2 binding in the APOE CpG island	103
5 CONCLUSION	107
