Preface ix

1	Lithium Metal Batteries	1
1.1	History	1
1.2	Types	2
1.2.1	Lithium–Oxygen Batteries	2
1.2.1.1	Working Mechanism of Li–O ₂ Batteries	2
1.2.1.2	Cathode Design of Li–O ₂ Batteries	4
1.2.1.3	Anode Protection of Li–O ₂ Batteries	8
1.2.2	Lithium–Sulfur Batteries	11
1.2.2.1	Conductive Matrixes for S Cathode	12
1.2.2.2	Modifying Separators of Li–S Batteries	15
1.2.2.3	Electrolyte Design for Li–S Batteries	17
1.2.2.4	Anode Protection for Li–S Batteries	18
1.2.3	Lithium–Selenium or –Tellurium Batteries	22
1.2.3.1	Lithium–Selenium Batteries	22
1.2.3.2	Lithium–Tellurium Batteries	29
1.2.4	Lithium–Iodine/Bromine Batteries	31
1.2.4.1	Lithium–Iodine Batteries	31
1.2.4.2	Lithium–Bromine Battery	36
1.2.5	TMO Batteries	37
1.3	Introductive Electrolytes	41
1.4	Prospects	44
	References	45
 2	 Electrode–Electrolyte Interphase	 55
2.1	Introduction	55
2.2	Solid Electrolyte Interphase	55
2.2.1	Concept and Roles	55
2.2.2	Types and Modification Strategies	56
2.3	Cathode Electrolyte Interphase	66

2.3.1	Concept and Roles	66
2.3.2	Types and Modification Strategies	66
	References	75
3	Safe Electrolytes	79
3.1	Introduction	79
3.2	Flame-Retardant Mechanism	80
3.3	Flame-Retardant Electrolytes	80
3.4	Nonflammable Electrolytes	85
3.5	Prospects	93
	References	95
4	High-Voltage Electrolytes	99
4.1	Introduction	99
4.2	The General Implications of High-Voltage Electrochemical Operation	101
4.2.1	Electrochemical Stability and Voltage Window for Electrolytes	101
4.2.2	Parasitic Electrolyte Oxidation and Formation of CEI	102
4.2.3	Metal Ion Diffusion, Surface Structural Reconstruction, and Mechanical Fracture of Cathode Materials	106
4.2.4	Instability of Other Cell Components at High Voltage	109
4.3	The Electrolyte Engineering for Various High-Voltage Cathodes	111
4.3.1	Nickel-Containing Layered Oxides	111
4.3.2	LiCoO ₂	116
4.3.3	Layered Li-Rich Cathodes	120
4.3.4	Other Cathode Materials	121
4.4	Conclusions	127
	References	127
5	Extreme Temperature Electrolytes	133
5.1	Low-Temperature Electrolytes	133
5.1.1	The Limitations of Battery Performance at Low Temperature	133
5.1.2	The Improvement of Electrolytes	137
5.2	High-Temperature Electrolytes	143
5.2.1	The Limitations of Battery Performance at High Temperature	144
5.2.2	The Improvement of Electrolytes	148
5.3	Prospective	151
	References	152
6	High-Concentration Electrolytes	157
6.1	High-Concentration Electrolytes	157
6.1.1	Concept, Design Strategies	157
6.1.2	Developments	158
6.2	Local High-concentration Electrolytes	168
6.2.1	Concept, Design Strategies	169

6.2.2	Developments	169
6.3	Prospects	178
	References	178
7	Theoretical Basis for Electrolyte and Electrode Study	183
7.1	Redox Potential	183
7.1.1	Theoretical Basis	183
7.1.2	Solvents and Salts	185
7.1.3	Redox Potential of the Complex	186
7.2	Solvation Structure	187
7.2.1	Basic Theory	187
7.2.2	Influencing Factors and Implicit Solvent Model	188
7.2.3	Solvation Analysis	189
7.2.4	De-Solvation	190
7.3	Lithium Diffusion	192
7.3.1	Lithium Diffusion in SEI	192
7.3.2	Lithium Diffusion in Electrode Material	194
7.3.2.1	Calculation of Electrode Materials	194
7.3.2.2	Equilibrium Voltage	194
7.3.2.3	Ionic Mobility	195
7.4	Conclusion	195
	References	196
8	Outlook	199
	Index	203
