

1	What Are Complexes?	1
1.1	History	3
1.1.1	Synthesis of Cobalt Ammine Complexes	6
1.1.2	Complexes According to Werner: An Ingenious Impertinence	7
1.2	Bonding	9
1.3	Questions	11
2	Structure and Nomenclature	13
2.1	IUPAC Nomenclature of Coordination Compounds	13
2.1.1	Establishment of the Formulae of Coordination Compounds	13
2.1.2	Names of Coordination Compounds	14
2.2	Nomenclature of Organometallic Compounds	17
2.2.1	Ligand Names for Organometallic Compounds	18
2.3	Information on the Structure	20
2.3.1	The μ Convention	20
2.3.2	The η Convention	22
2.3.3	The κ Convention	23
2.4	Structure of Complexes	24
2.4.1	Ligands and Their Denticity	24
2.4.2	Coordination Numbers and Coordination Polyhedra	28
2.5	Isomerism in Coordination Compounds	31
2.5.1	Stereoisomerism	32
2.5.2	Enantiomers	33
2.6	Questions	34
3	What Are Organometallic Compounds?	35
3.1	History	36
3.2	The 18-Electron Rule	38

3.2.1	Counting Electrons	40
3.3	Important Reactions in Organometallic Chemistry	42
3.3.1	Coordination and Release of Ligands	42
3.3.2	Oxidative Addition and Reductive Elimination	43
3.3.3	Insertion of Olefins and β -H Elimination	43
3.3.4	Oxidative Coupling and Reductive Cleavage	45
3.3.5	α -H Elimination and Carbene Insertion	45
3.4	Questions	46
4	Bond Theories	47
4.1	Electron Configuration and Term Symbols	47
4.1.1	Quantum Numbers	47
4.1.2	Term Symbols	51
4.2	The Valence-Bond (VB) Theory	54
4.3	The Ligand Field Theory	56
4.3.1	Octahedral Ligand Field	57
4.3.2	Crystal Field Stabilization Energy and the Spectrochemical Series	60
4.3.3	High-Spin and Low-Spin	62
4.3.4	Non-Octahedral Ligand Fields	63
4.4	The Molecular Orbital (MO) Theory	65
4.4.1	σ and π Interactions Between Ligand and Central Atom	66
4.4.2	MO Scheme of a σ Complex	69
4.4.3	MO Scheme of a π Complex	71
4.5	Questions	71
5	Color of Coordination Compounds	73
5.1	Why Are Complexes Coloured?	73
5.2	Selection Rules for Electronic Transitions	76
5.3	Charge Transfer (CT) Transitions	78
5.4	d-d Transitions and the Determination of Δ_o	80
5.4.1	Tanabe-Sugano Diagrams	83
5.4.2	<i>trans</i> -[CoCl ₂ (en) ₂]Cl and <i>cis</i> -[CoCl ₂ (en) ₂]Cl	85
5.5	Questions	86
6	Stability of Coordination Compounds	87
6.1	What Is a Stable Complex?	87
6.1.1	The HSAB Concept	90
6.2	Thermodynamic Stability and Inertness of Complexes	93
6.3	The Chelate Effect	95
6.3.1	Chelation Therapy	98
6.3.2	Radiotherapy and MRI	100

6.4	The <i>Trans</i> Effect	102
6.4.1	Interpretation of the <i>Trans</i> Effect	102
6.4.2	Cisplatin and the <i>Trans</i> Effect	103
6.5	Questions	105
7	Redox Reactions of Coordination Compounds	107
7.1	Blue Copper Proteins	108
7.1.1	The Jahn-Teller Effect	108
7.2	Redox Reactions in Coordination Compounds	110
7.2.1	The Outer Sphere Mechanism	111
7.2.2	Inner Sphere Mechanism	115
7.3	Non-Innocent Ligands Using the Example of NO	117
7.3.1	Complexes with Redox-Active Ligands	117
7.4	Questions	120
8	Supramolecular Coordination Chemistry	121
8.1	Molecular Recognition	122
8.1.1	The Template Effect	124
8.2	Helicates	127
8.3	MOFs - <i>Metal-Organic</i> Frameworks	130
8.3.1	Coordination Polymer or MOF?	130
8.3.2	The Structure of MOFs	131
8.3.3	Advantages and Potential Applications	134
8.4	Questions	138
9	Metal-Metal Bond	139
9.1	Nomenclature for Polynuclear Complexes/Metal-Metal Bonds	140
9.2	Metal-Metal Single Bond	140
9.2.1	The EAN Rule	140
9.2.2	MO Theory	141
9.3	Multiple Metal-Metal Bonds	142
9.3.1	Higher, Stronger, Shorter: Metal-Metal Quintuple Bond	145
9.4	Cluster Complexes	147
9.4.1	The Isolobal Analogy	147
9.4.2	The Wade Rules for Boran Clusters	149
9.4.3	The Wade-Mingos Rules	151
9.5	Questions	153
10	Magnetism	155
10.1	Units	156
10.2	Magnetic Properties of Matter	157
10.2.1	Diamagnetism	159
10.2.2	Paramagnetism	160

10.3	The Magnetic Moment	161
10.3.1	Origin of the Magnetic Moment	161
10.3.2	Spin-Orbit and j - j Coupling	162
10.4	Temperature Dependence of the Magnetic Moment	167
10.5	Cooperative Magnetism	171
10.5.1	Exchange Interactions	172
10.5.2	Magnetism of Metals	173
10.5.3	Orthogonal Orbitals	177
10.5.4	Microstructure of Ferromagnets	185
10.6	Spin Crossover	186
10.6.1	Theoretical Considerations	188
10.6.2	Pressure Dependence	191
10.6.3	Switching with Light: The LIESST Effect	192
10.6.4	Cooperative Interactions and Hysteresis	195
10.7	Questions	197
11	Luminescence of Metal Complexes	199
11.1	Basics	199
11.2	Fluorescence Using the Example of a Zinc(II) Complex	203
11.2.1	Prerequisites for Fluorescence	205
11.3	Phosphorescence of Diamagnetic Complexes	206
11.3.1	d^6 $[M(\text{bipy})_3]^{2+}$ Complexes	206
11.3.2	Copper(I) Complexes as Example of $3d^{10}$	209
11.4	Phosphorescence of Metal-Centered Transitions	211
11.5	Luminescence by Aggregation of Platinum(II) Complexes	212
11.6	Questions	214
12	Bioinorganic Chemistry	215
12.1	Biologically Relevant Iron Complexes	216
12.1.1	Model Compounds	217
12.2	Oxygen Transport Using the Example of Hemoglobin	219
12.2.1	Oxygen Complexes	221
12.2.2	Bonding Situation in Hemoglobin	222
12.2.3	Model Compounds for Hemoglobin and Myoglobin	225
12.3	Cobalamins: Stable Organometallic Compounds	228
12.3.1	Bioavailability of Elements	230
12.3.2	Structure	231
12.3.3	Reactivity	232
12.4	Questions	237
13	Catalysis	239
13.1	Catalyst	239
13.2	Preparation of Polyethylene (PE)	240

13.2.1	Ziegler's Build-Up and Displacement Reaction	241
13.2.2	The Nickel Effect	243
13.2.3	Polymerisation of Ethylene by the Low Pressure Process	245
13.2.4	Chain Termination Reactions	248
13.3	Polypropylene	248
13.3.1	Regioselectivity	248
13.3.2	Stereoselectivity	250
13.4	Photocatalysis	253
13.4.1	Basics	253
13.4.2	Photosynthesis	257
13.4.3	Photocatalytic Water Splitting	259
13.5	Questions	261
