

Contents

Preface vii

1	Enhanced Carbon-Based Materials and Their Applications	1
	<i>Poh Choon Ooi, Mengying Xie, and Chang Fu Dee</i>	
1.1	Overview	1
1.2	Glance of Carbon-Based Materials	1
1.3	Applications	4
1.4	Outline of This Book	5
	References	5
2	Carbon-Based Nanomaterials: Synthesis and Characterizations	9
	<i>Yazid Yaakob and Shahira L. Kamis</i>	
2.1	Introduction	9
2.1.1	Carbon	10
2.1.2	Allotropes of Carbon	10
2.2	Synthesis of Carbon-Based Nanostructures	13
2.2.1	Chemical Vapor Deposition Technique	14
2.2.1.1	Thermal Chemical Vapor Deposition	17
2.2.1.2	Plasma-Enhanced Chemical Vapor Deposition	18
2.2.2	Ion Irradiation Technique	20
2.3	Characterization	22
2.3.1	Raman Spectroscopic Characterization of Carbon Nanostructure Materials	22
2.3.2	Electron Microscopy	23
2.3.2.1	Scanning Electron Microscopy	24
2.3.2.2	Transmission Electron Microscopy	25
2.3.2.3	<i>In Situ</i> Transmission Electron Microscopy	26
2.4	Summary	30
	References	31

3	Functional Carbon-Based Nanomaterials and Sensor Applications	37
	<i>Muhammad A. S. M. Haniff and Chang Fu Dee</i>	
3.1	Introduction to Low-Dimensional Carbon-Based Nanomaterials	37
3.2	Modification of Low-Dimensional Carbon-Based Nanomaterials	41
3.3	Plasma-Based Synthesis of Heteroatom-Doped Graphene	47
3.3.1	<i>In Situ</i> Plasma-Assisted Growth and Doping	47
3.3.2	Post-Growth Plasma Treatment	50
3.3.3	Properties of Heteroatom-Doped Graphene	54
3.4	Doping Modulation in Graphene for Optoelectronic Applications	55
3.5	Imperfections in Graphene for Strain–Pressure-Sensing Applications	57
3.6	Structural Defect in Graphene for Gas-Sensing Applications	61
	References	64
4	Fabrication Techniques of Resistive Switching Carbon-Based Memories	77
	<i>Poh Choon Ooi and M. F. Mohd Razip Wee</i>	
4.1	Introduction – Emerging Carbon-Based Memory Technologies	77
4.2	Memristor-Based Memory	78
4.3	Substrate Options	79
4.4	Effect of Electrode Materials	80
4.5	Fabrication Methods of Metal/Insulator/Metal Structure	80
4.5.1	Spin Coating	81
4.5.2	Spray Coating	84
4.5.3	Dip Coating	88
4.5.4	Inkjet Printing	89
4.5.5	Plasma Polymerization (PP) Deposition	93
4.6	Conclusion	97
	References	97
5	Carbonous-Based Optoelectronic Devices	101
	<i>Nazia Nasr, Kashif Shahzad, Ishaq Ahmad, Chang Fu Dee, Badariah Bais, and Tingkai Zhao</i>	
5.1	Introduction	101
5.2	Graphene-Based Optoelectronics	103
5.3	Carbonous Materials in Photovoltaics	110
5.4	Carbonous Materials in Dye-Sensitized Solar Cells	111
5.5	Carbonous Materials in Perovskite Solar Cells (PSCs)	114
	References	117
6	Thermoelectric Energy Harvesters and Applications	127
	<i>Ravi A. Kishore and Kerry Rippy</i>	
6.1	Introduction	127
6.2	Thermoelectric Effect and Properties	130

6.2.1	Seebeck Effect	130
6.2.2	Peltier Effect	131
6.2.3	Thomson Effect	132
6.2.3.1	Figure-of-Merit and Power Factor	132
6.3	Thermoelectric Power and Efficiency	134
6.3.1	Simplified One-Dimensional Decoupled Model	134
6.3.2	Three-Dimensional Coupled Multiphysics Model	137
6.4	Thermoelectric Materials	137
6.4.1	Inorganic Thermoelectric Materials	137
6.4.2	Organic Thermoelectric Materials	138
6.4.3	Hybrid Organic–Inorganic Thermoelectric Materials	144
6.5	Application of Organic Thermoelectric Generators	146
6.6	Summary/Future Perspective	149
	References	150

7 Carbon-Enhanced Piezoelectric Materials and Applications 155

Mengying Xie, Chengcheng Tian, and Poh Choon Ooi

7.1	Introduction	155
7.2	Carbon-Enhanced Piezoelectric Materials	157
7.2.1	Inorganic Piezoelectric Materials	157
7.2.2	Organic Piezoelectric Materials	162
7.2.2.1	Carbon Nanotubes	164
7.2.2.2	Graphene and Graphene-Based Materials	167
7.2.2.3	Quantum Dots	168
7.3	Fabrication Methods	169
7.4	Applications	173
7.4.1	Energy Harvesters	173
7.4.2	Biomechanical Sensor	173
7.4.3	Other Applications	175
7.5	Conclusion	176
	Acknowledgment	176
	References	176

8 Actuators Based On the Carbon-Enhanced Materials 185

Mauro Giorcelli and Mattia Bartoli

8.1	Introduction	185
8.2	Actuation on the Molecular Scale	186
8.3	Carbon Nanomaterials	186
8.3.1	Graphene and Related Materials	186
8.3.2	Carbon Nanotubes	188
8.3.3	Fullerenes	190
8.4	Carbon-Based Actuation	191
8.4.1	Carbon Nanotube-Based Actuators	191
8.4.2	Graphene and Graphene Oxide Actuators	194

8.4.3	Fullerene-Based Actuators	198
8.5	Challenges and Prospectives of Actuators Based on Carbon Nanostructures	198
	References	199
9	Display Based on Carbon-Enhanced Materials	209
	<i>Feng Lin, Hong Zhong, and Zhiming Wang</i>	
9.1	Introduction	209
9.2	Display Based on CDs	210
9.2.1	Synthesis of CDs	211
9.2.2	Optical Properties of CDs in Display	211
9.2.3	CDs in LEDs Display Applications	213
9.2.3.1	Photoluminescent LEDs	213
9.2.3.2	Electroluminescent LEDs	216
9.3	Display Based on Carbon Nanotubes	218
9.3.1	CNTs Emission Material in Display	218
9.3.2	CNTs as Alignment and Polarized Material in LCDs	220
9.3.3	CNT-TFT in LCD and OLED	222
9.3.4	Transparent Electrode and Touch Panel in the Display	224
9.4	Display Based on Graphene and Graphene Oxide	226
9.4.1	Graphene and Graphene Oxide as Liquid-Crystal Materials	226
9.4.2	Graphene Transparent Electrode in the Display	228
9.5	Summary and Outlook	230
	References	231
10	Enhanced Carbon-Based Materials and Their Applications	243
	<i>Poh Choon Ooi, Mengying Xie, and Chang Fu Dee</i>	
	References	244
	Index	246
