- About the Author 12
- Introduction 13
- Chapter 1 Alexa History and Devices 14
 - 1.1 Alexa voice service and AWS Lambda 15
 - 1.2 Pricing 15
 - 1.3 Alexa skills 15
 - 1.4 Supported programming languages 16
 - 1.5 Terminology – Invocation, Utterances, Intents and Slots 16
 - 1.5.1 Alexa Wake word 16
 - 1.5.2 Invocation 16
 - 1.5.3 Utterances 16
 - 1.5.4 Intents and requests 17
 - 1.5.5 Slots 17
 - 1.5.6 Interaction model 19
 - 1.5.7 Endpoints 19
 - 1.5.8 Regions 19
 - 1.6 Skill Sessions 19
 - 1.7 Session attributes 19
 - 1.8 Request and response JSON 20
 - 1.9 Blueprint skills 21
 - 1.10 Summary 22
 - 1.11 References: 22
- Chapter 2 Creating your Amazon Account 23
 - 2.1 Introduction 23
 - 2.2 Create your Amazon account 23
 - 2.3 Your skills 26
 - 2.4 Hosting 26
 - 2.5 Summary 27
- Chapter 3 Creating an Alexa Skill 28
 - 3.1 Introduction 28
 - 3.2 Your first skill 28

3.2.1 The interaction model	29
3.2.2 Choose a method	29
3.2.3 The Invocation Name	32
3.2.4 The Intents	33
3.2.5 The code	34
3.3 Testing your skill	38
3.4 Skill I/O	39
3.4.1 Skill request	40
3.4.2 Skill response	42
3.4.3 Speech Synthesis Markup Language (SSML)	43
3.5 Code editing	44
3.5.1 Edit the HelloWorldIntentHandler code	44
3.5.2 Add some debug code	44
3.6 Test your code	46
3.7 Utility code	46
3.8 Debugging	49
3.9 Node.js differences	50
3.10 Node.js debugging	51
Chapter 4 Slots and Dialogs, Saving Session Data	52
4.1 Introduction	52
4.2 Slots in action	52
4.3 Slot skill	52
4.3.1 Invocation Name	52
4.4 Skill flow	53
4.5 Add the intent to our skill	54
4.6 Evaluate your model	57
4.6.1 The JSON editor	59
4.7 Accessing the slot	60
4.8 The code	61
4.8.1 Test your skill	64
4.9 Session attributes - saving slot values	65
4.9.1 Remember their name	65
4.10 Dialog delegation	67
4.11 The Birthday code	72
4.12 Handling Yes and No intents	75
4.13 Multiple Yes / No sources	79

4.14 AMAZON.SearchQuery	80
4.15 ASK SDK Utilities	81
4.16 Intent error logging	82
4.17 Language understanding NLU and Automatic speech recognition ASR	82
4.18 Summary	82
Chapter 5 S3 Storage and DynamoDB Database	83
5.1 Introduction	83
5.2 Local storage	83
5.3 Persistent attributes, DynamoDB and S3	84
5.3.1 Code example	85
5.3.2 DynamoDB database storage	89
5.4 Request and response interceptors	90
5.5 DynamoDB	94
5.6 S3 storage	95
5.7 Summary	98
Chapter 6 Certification and Publishing	99
6.1 Introduction	99
6.2 Adding further languages	99
6.3 Distribution	100
6.4 Availability and Beta Testing	102
6.5 Beta Tester	103
6.6 Validation	103
6.7 Submission	104
6.8 Post Publication	104
6.9 Analytics	105
6.10 Summary	106
6.11 References	106
Chapter 7 Creating Skills with Lambda and ASK CLI	107
7.1 Introduction	107
7.1.1 AWS Lambda skill	107
7.2 ASK CLI	114
7.3 Visual Studio code	115
7.4 Local debugging	120
7.4.1 Add Alexa debugger configuration	121
7.4.2 Test your Alexa skill in VS code	123

7.5 Summary	124
7.6 References	124
Chapter 8 Alexa Presentation Language – APL	125
8.1 Introduction	125
8.2 APLA	126
8.2.1 APLA components	127
8.3 Datasources	129
8.4 APLA datasource example	129
8.5 Adding an APLA reprompt	133
8.6 Summary	135
8.7 References	135
Chapter 9 APL Visual Multimodal Responses	136
9.1 Introduction	136
9.2 Creating an APL Visual Response	136
9.3 Visual Components	140
9.4. APL component example	140
9.5 Using the Authoring Tool	142
9.6 Integrating APL and code	146
9.6.1 Check for screen support	148
9.7 APL Commands	150
9.7.1 Standard Commands	150
9.7.2 Media Commands	150
9.7.3 User-defined commands	150
9.7.4 Execute Commands directive	150
9.8 Responsive components and Alexa Layouts	151
9.9 Converting Text to speech – using Transformers	151
9.9.1 Transformer APL design	152
9.9.2 Operation	154
9.9.3 Using the ExecuteDirective command	155
9.10 Summary	157
9.11 References	157
Chapter 10 Alexa In-skill Purchasing (ISP)	158
10.1 Introduction	158
10.2 Create your ISP skill	159

10.3 Accessing your ISP code	161
10.4 Retrieve in-skill products, get their information and purchase.	164
10.5 Produce detail and purchase	167
10.6 Purchase	169
10.6.1 Failed Purchase	174
10.6.2 Refunds	174
10.7 References	178
Chapter 11 Progressive Response - Accessing the Internet	179
11.1 Introduction	179
11.2 Steps to Send a Progressive Response	179
11.3 Progressive response example.	179
11.3.1 Code response.	182
11.4 asyncio, async and await - awaiting a web response	183
11.5 References	183
Chapter 12 Creating a Raspberry Pi IoT Thing	184
12.1 Introduction	184
12.2. Create a Raspberry Pi IoT	184
12.2.1 a) Create our 'Thing' and its certificates	184
12.2.1 b) Thing's endpoint	187
12.2.1 c) Transfer the certificates to your Pi	188
12.2.2 Create and run the Python code.	188
12.2.3 Send messages to your Pi	189
12.2.4 Create an Alexa-Hosted Skill	191
12.2.5 Test the skill	193
12.3 Add intents to the Alexa skill.	194
12.4 Control the robot.	195
12.5 Add intent handlers to the skill code	196
12.6 Modify your code	198
12.6.1 Modify your Pi code - LED	198
12.6.2 Modify your Pi code - explorerhat.	199
12.7 Test your robot or LED	200
12.8 Summary	200
Chapter 13 Smart Home Devices	201
13.1 Introduction	201

13.2 Alexa Interfaces	201
13.3 Login with Amazon (LWA)	201
13.3.1 Create a security profile	202
13.4 Create your Smart Home Skill	203
13.5 Create a Lambda function	203
13.6 Lambda skill code	204
13.7 Test your Lambda function	205
13.8 Link the function to the skill	207
13.9 Configure account linking	207
13.10 Enable and Link the skill	209
13.11 Clean up	212
13.12 Troubleshooting	212
13.13 Summary	212
13.14 References	213
Chapter 14 Controlling a smart home raspberry Pi with SQS.	214
14.1 Introduction	214
14.2 Create an SQS Queue.	214
14.3 Raspberry Pi SQS code	216
14.4 Create a Smart Home skill	218
14.5 Create the function	218
14.6 Create a security profile	219
14.7 Configure the smart home skill	219
14.8 Add the function code.	219
14.9 Test the function	222
14.10 Discover your device	222
14.11 Test from an Alexa device	223
14.12 Clean up	223
14.13 Summary	223
14.14 References	224
Chapter 15 IoT, Pi and Node-RED	225
15.1 Introduction	225
15.2 Prerequisites	225
15.3 Installation	226
15.4 Running node-RED.	226
15.5 Node-RED user interface.	227

15.6 First flow design - Hello world	228
15.7 Hardware I/O	230
15.7.1 Add an input	233
15.8 Using the Sense Hat.	235
15.9 Node-RED dashboard	237
15.10 Sense Hat output.	241
15.11 IoT - Receiving MQTT messages.	242
15.12 Create a new IoT thing for MQTT communication.	242
15.12.1 Subscribe to a topic	244
15.13 Node-RED IoT Application	244
15.14 Receiving MQTT messages	247
15.15 Summary	249
Chapter 16 Proactive Events – Sending Raspberry Pi Alexa Notifications	250
16.1 Introduction	250
16.2 The Lambda function	250
16.3 Send a notification.	256
16.4 Code to get the access token	257
16.5 Send the notification	259
16.6 Summary	261
16.7 References:.	261
Chapter 17 Raspberry Pi as a Stand-alone Alexa Device	262
17.1 Introduction	262
17.2 Raspberry Pi setup.	262
17.3 Procedure	263
17.3.1 Register your AVS device with Amazon	263
17.3.2 Download and install the AVS SDK	267
17.3.3 Run and authorize the sample app	269
17.4 Use the sample app	271
17.5 Summary	271
17.6 References	271
Chapter 18 Conclusion	272
18.1 Conclusion	272
Index.	273
