

Contents

Part I Plenary Lectures

The Expanding Role of Applications in the Development and Validation of CFD at NASA	3
David M. Schuster	

Thermodynamically Consistent Systems of Hyperbolic Equations	31
S.K. Godunov	

Part II Keynote Lectures

A Brief History of Shock-Fitting	37
Manuel D. Salas	

Understanding Aerodynamics Using Computers	55
Mohamed M. Hafez	

Part III High-Order Methods

A Unifying Discontinuous CPR Formulation for the Navier–Stokes Equations on Mixed Grids	59
Z.J. Wang, Haiyang Gao, and Takanori Haga	

Assessment of the Spectral Volume Method on Inviscid and Viscous Flows	67
Oussama Chikhaoui, Jérémie Gressier, and Gilles Grondin	

Runge–Kutta Discontinuous Galerkin Method for Multi–phase Compressible Flows	73
Vincent Perrier and Erwin Franquet	

Energy Stable WENO Schemes of Arbitrary Order	81
Nail K. Yamaleev and M.H. Carpenter	

Part IV Two-Phase Flow

A Hybrid Method for Two-Phase Flow Simulations	91
Kateryna Dorogan, Jean-Marc H��rard, and Jean-Pierre Minier	

HLLC-Type Riemann Solver for the Baer–Nunziato Equations of Compressible Two-Phase Flow	99
Svetlana A. Tokareva and Eleuterio F. Toro	

Parallel Direct Simulation Monte Carlo of Two-Phase Gas-Droplet Laser Plume Expansion from the Bottom of a Cylindrical Cavity into an Ambient Gas	105
Alexey N. Volkov and Gerard M. O’Connor	

Study of Dispersed Phase Model for the Simulation of a Bubble Column .	113
F. Sporleder, Carlos A. Dorao, and H.A. Jakobsen	

Application of Invariant Turbulence Modeling of the Density Gradient Correlation in the Phase Change Model for Steam Generators	121
Yasuo Obikane and Shigeru Ikeo	

Part V Algorithms

Reformulated Osher-Type Riemann Solver	131
Eleuterio F. Toro and Michael Dumbser	

Entropy Traces in Lagrangian and Eulerian Calculations	137
Philip L. Roe and Daniel W. Zaide	

Automatic Time Step Determination for Enhancing Robustness of Implicit Computational Algorithms	145
Chenzhou Lian, Guoping Xia, and Charles L. Merkle	

Part VI Boeing–Russia Cooperation

Fifteen Years of Boeing–Russia Collaboration in CFD and Turbulence Modeling/Simulation	155
Sergey V. Kravchenko, Philippe R. Spalart, and Mikhail Kh. Strelets	

LES-Based Numerical System for Noise Prediction in Complex Jets	163
Mikhail L. Shur, Andrey V. Garbaruk, Sergey V. Kravchenko, Philippe R. Spalart, and Mikhail Kh. Strelets	

Part VII Discontinuous Galerkin Methods

Local Time-Stepping for Explicit Discontinuous Galerkin Schemes	171
Gregor Gassner, Michael Dumbser, Florian Hindenlang, and Claus-Dieter Munz	

Multi-dimensional Limiting Process for Discontinuous Galerkin Methods on Unstructured Grids	179
Jin Seok Park and Chongam Kim	

Runge Kutta Discontinuous Galerkin to Solve Reactive Flows	185
Germain Billet and Juliette Ryan	

Comparison of the High-Order Compact Difference and Discontinuous Galerkin Methods in Computations of the Incompressible Flow	191
Artur Tyliczszak, Maciej Marek, and Andrzej Boguslawski	

On the Boundary Treatment for the Compressible Navier–Stokes Equations Using High-Order Discontinuous Galerkin Methods	197
Andreas Richter and Jörg Stiller	

Analytical and Numerical Investigation of the Influence of Artificial Viscosity in Discontinuous Galerkin Methods on an Adjoint-Based Error Estimator	203
Jochen Schütz, Georg May, and Sebastian Noelle	

Part VIII Vortex Dynamics

Analysis of a Swept Wind Turbine Blade Using a Hybrid Navier–Stokes/Vortex-Panel Model	213
Kensuke Suzuki, Sven Schmitz, and Jean-Jacques Chattot	

Using Feature Detection and Richardson Extrapolation to Guide Adaptive Mesh Refinement for Vortex-Dominated Flows	219
Sean J. Kamkar, Antony Jameson, Andrew M. Wissink, and Venkateswaran Sankaran	

Triple Decomposition Method for Vortex Identification in Two-Dimensional and Three-Dimensional Flows	225
V. Kolář, P. Moses, and J. Šístek	

Part IX Design Optimization

Multi-point Optimization of Wind Turbine Blades Using Helicoidal Vortex Model	235
Marcel Wijnen and Jean-Jacques Chattot	

Performance Evaluation of the Numerical Flux Jacobians in Flow Solution and Aerodynamic Design Optimization	241
Alper Ezertas and Sinan Eyi	

Design Optimization in Non-equilibrium Reacting Flows	247
Sinan Eyi, Alper Ezertas, and Mine Yumusak	

Shock Control Bump Design Optimization on Natural Laminar Aerofoil .	253
D.S. Lee, J. Periaux, K. Srinivas, L.F. Gonzalez, N. Qin, and E. Onate	

Uncertainty Analysis Utilizing Gradient and Hessian Information	261
Markus P. Rumpfkeil, Wataru Yamazaki, and Dimitri J. Mavriplis	

Part X Interface Tracking

Augmented Lagrangian/Well-Balanced Finite Volume Method for Compressible Viscoplastic Flows	271
Didier Bresch, Enrique D. Fernandez-Nieto, Ioan Ionescu, and Paul Vigneaux	

Stable Simulation of Shallow-Water Waves by Block Advection	279
Lai-Wai Tan and Vincent H. Chu	

Flood-Waves Simulation by Classical Method of Consistent Transport	287
Tao Wang, Lai-Wai Tan, and Vincent H. Chu	

Part XI Vehicles and Vortices

Numerical Simulation and Control of the 3D Flow Around Ahmed Body .	297
C.-H. Bruneau, E. Creusé, D. Depeyras, P. Gilliéron, and I. Mortazavi	

Aerodynamic Multiobjective Design Exploration of Flapping Wing Using a Navier–Stokes Solver	303
Yuuki Yamazaki, Akira Oyama, Taku Nonomura, Kozo Fujii, and Makoto Yamamoto	

Study into Effects of Vortex Generators on a Supercritical Wing	309
Jingbo Huang, Zhixiang Xiao, and Song Fu	

Part XII Turbulence Modeling

Numerical Simulation of the Turbulent Detached Flow Around a Thick Flat Plate	317
C. Tenaud, Y. Fraigneau, and V. Daru	

Progress in DES for Wall-Modelled LES of Complex Internal Flows	325
Charles Mockett and Frank Thiele	

Enhancement of the Performance of the Partial-Averaged Navier – Stokes Method by Using Scale-Adaptive Mesh Generation	333
B. Basara and Z. Pavlovic	

Sensitizing Second-Moment Closure Model to Turbulent Flow Unsteadiness	341
Robert Maduta and Suad Jakirlić	

Part XIII Turbulent Compressible/Hypersonic Flows

High Order Scheme for Compressible Turbulent Flows	351
Christelle Wervaecke, Héloïse Beaugendre, and Boniface Nkonga	

Receptivity of Hypersonic Flow over Blunt-Noses to Freestream Disturbances Using Spectral Methods	357
Kazem Hejranfar, Mehdi Najafi, and Vahid Esfahanian	

Part XIV Bio-Fluid Mechanics

Flow Structures in Physiological Conduits	365
A.M. Gambaruto and A. Sequeira	

Fluid Mechanics in Aortic Prostheses After a Bentall Procedure	371
M.D. de Tullio, L. Afferrante, M. Napolitano, G. Pascasio, and R. Verzicco	

Optimisation of Stents for Cerebral Aneurysm	377
C.J. Lee, S. Townsend, and K. Srinivas	

Micron Particle Deposition in the Nasal Cavity Using the v^2-f Model	383
Kiao Inthavong, Jiyuan Tu, and Christian Heschl	

Part XV Meshing Technology

Adjoint-Based Adaptive Meshing in a Shape Trade Study for Rocket Ascent	391
Marshall R. Gusman, Jeffrey A. Housman, and Cetin C. Kiris	

Mesh Quality Effects on the Accuracy of Euler and Navier–Stokes Solutions on Unstructured Meshes	401
Aaron Katz and Venkateswaran Sankaran	

Analysis of a RK/Implicit Smoother for Multigrid	409
R.C. Swanson, E. Turkel, and S. Yaniv	

Anisotropic Adaptive Technique for Simulations of Steady Compressible Flows on Unstructured Grids	419
O. Feodoritova, D. Kamenetskii, S.V. Kravchenko, A. Martynov, S. Medvedev, and V. Zhukov	

Part XVI Aeroacoustics

Euler – Navier–Stokes Coupling for Aeroacoustics Problems	427
Michel Borrel, Laurence Halpern, and Juliette Ryan	

Computational Aeroacoustics on a Small Flute Using a Direct Simulation .	435
Yasuo Obikane	

An Iterative Procedure For the Computation of Acoustic Fields Given by Retarded-Potential Integrals	443
Florent Margnat	

Innovative Tool for Realistic Cavity Flow Analysis: Global Stability	449
Fabien Mery and Gregoire Casalis	

Part XVII Large-Scale Computations

Comparison of Parallel Preconditioners for a Newton-Krylov Flow Solver	457
Jason E. Hicken, Michal Osusky, and David W. Zingg	

Large-Scale CFD Data Compression for Building-Cube Method Using Wavelet Transform	465
Ryotaro Sakai, Daisuke Sasaki, and Kazuhiro Nakahashi	

Part XVIII Euler Solvers

A Conservative Coupling Method for Fluid-Structure Interaction in the Compressible Case	473
Laurent Monasse, Virginie Daru, Christian Mariotti, and Serge Piperno	

A Preconditioned Euler Flow Solver for Simulation of Helicopter Rotor Flow in Hover	479
Kazem Hejranfar and Ramin Kamali Moghadam	

A New Type of Gas-Kinetic Upwind Euler/N-S Solvers	485
Lei Tang	

Part XIX High-Order Accuracy

Efficiency Enhancement in High Order Accurate Euler Computation via AWM	495
Hyungmin Kang, Dongho Lee, Dohyung Lee, Dochan Kwak, and John Seo	

On the Construction of High Order Finite Volume Methods	501
Wanai Li, Guodong Lei, and Yu-xin Ren	

Multiblock Computations of Complex Turbomachinery Flows Using Residual-Based Compact Schemes	509
Bertrand Michel, Paola Cinnella, and Alain Lerat	

A Local Resolution Refinement Algorithm Using Gauss-Lobatto Quadrature	515
J.S. Shang and P.G. Huang	

Performance Comparison of High Resolution Schemes	527
Müslüm Arıcı and Hüseyin Şinasi Onur	

Solving the Convective Transport Equation with Several High-Resolution Finite Volume Schemes: Test Computations	535
Alexander I. Khrabry, Evgueni M. Smirnov, and Dmitry K. Zaytsev	

Part XX Free-Surface Flow

Computational Study of Hydrodynamics and Heat Transfer Associated with a Liquid Drop Impacting a Hot Surface	543
Edin Berberović, Ilia V. Roisman, Suad Jakirlić, and Cameron Tropea	

A Second Order JFNK-Based IMEX Method for Single and Multi-Phase Flows	549
Samet Kadioglu, Dana Knoll, Mark Sussman, and Richard Martineau	

Simulation of Two-Phase Flow in Sloshing Tanks	555
Roel Luppès, Arthur Veldman, and Rik Wemmenhove	

High-Precision Reconstruction of Gas-Liquid Interface in PLIC-VOF Framework on Unstructured Mesh	563
Kei Ito, Tomoaki Kunugi, and Hiroyuki Ohshima	

Part XXI Mesh Adaptation

Adjoint-Based Methodology for Anisotropic Grid Adaptation	571
Nail K. Yamaleev, Boris Diskin, and Kedar Pathak	

Transient Adaptive Algorithm Based on Residual Error Estimation	577
N. Ganesh and N. Balakrishnan	

Adaptive and Consistent Properties Reconstruction for Complex Fluids Computation	583
Guoping Xia, Chenzhou Lian, and Charles L. Merkle	

Space-Filling Curve Techniques for Parallel, Multiscale-Based Grid Adaptation: Concepts and Applications	591
Sorana Melian, Kolja Brix, Siegfried Müller, and Gero Schieffer	

Part XXII Immersed Boundary Method

Recent Advances in the Development of an Immersed Boundary Method for Industrial Applications 601

M.D. de Tullio, P. De Palma, M. Napolitano, and G. Pascazio

An Overview of the LS-STAG Immersed Boundary Method for Viscous Incompressible Flows 607

Olivier Botella and Yoann Cheny

A Two-Dimensional Embedded-Boundary Method for Convection Problems with Moving Boundaries 613

Yunus Hassen and Barry Koren

A Second-Order Immersed Boundary Method for the Numerical Simulation of Two-Dimensional Incompressible Viscous Flows Past Obstacles 621

François Bouchon, Thierry Dubois, and Nicolas James

Part XXIII Gas-Kinetic BGK Schemes

A New High-Order Multidimensional Scheme 629

Qibing Li, Kun Xu, and Song Fu

A Direct Boltzmann-BGK Equation Solver for Arbitrary Statistics Using the Conservation Element/Solution Element and Discrete Ordinate Method 637

Bagus Putra Muljadi and Jaw-Yen Yang

Part XXIV Extreme Flows

Space-Time Convergence Analysis of a Dual-Time Stepping Method for Simulating Ignition Overpressure Waves 645

Jeffrey A. Housman, Michael F. Barad, Cetin C. Kiris, and Dochan Kwak

Numerical Solution of Maximum-Entropy-Based Hyperbolic Moment Closures for the Prediction of Viscous Heat-Conducting Gaseous Flows .. 653

James G. McDonald and Clinton P.T. Groth

Supercritical-Fluid Flow Simulations Across Critical Point 661

Satoru Yamamoto, Takashi Furusawa, and Ryo Matsuzawa

Numerical Model for the Analysis of the Thermal-Hydraulic Behaviors in the Calandria Based Reactor	669
Mula Venkata Ramana Reddy, S.D. Ravi, P.S. Kulkarni, and N.K.S. Rajan	

Part XXV Deformable Bodies

Seamless Virtual Boundary Method for Complicated Incompressible Flow Simulation	679
Hidetoshi Nishida	

Modeling, Simulation and Control of Fish-Like Swimming	689
Michel Bergmann and Angelo Iollo	

Multi-Level Quasi-Newton Methods for the Partitioned Simulation of Fluid-Structure Interaction	695
Joris Degroote, Sebastiaan Annerel, and Jan Vierendeels	

Entropic Lattice Boltzmann Simulation for Unsteady Flow Around two Square Cylinders Arranged Side by Side in a Channel	701
Takahiro Yasuda and Nobuyuki Satofuka	

An Eulerian Approach for Fluid and Elastic Structure Interaction Problems	707
Koji Morinishi and Tomohiro Fukui	

Part XXVI DNS/RANS Computations

Dissipation Element Analysis of Inhomogenous Turbulence	717
Philip Schaefer, Markus Gampert, Jens Henrik Goebbert, and Norbert Peters	

A Matrix-Free Viscous Linearization Procedure for Implicit Compressible Flow Solvers	723
Nikhil Vijay Shende and N. Balakrishnan	

DNS of Shock/Boundary Layer Interaction Flow in a Supersonic Compression Ramp	729
Xin-Liang Li, De-Xun Fu, Yan-Wen Ma, and Xian Liang	

An Efficient Generator of Synthetic Turbulence at RANS–LES Interface in Embedded LES of Wall-Bounded and Free Shear Flows	739
Dmitry Adamian and Andrey Travin	

A Numerical Simulation of the Magnetically Driven Flows in a Square Container Using the Delayed Detached Eddy Simulation	745
Karel Fraňa, Vít Honzejek, and Kateřina Horáková	

On the Performance of Optimized Finite Difference Schemes in Large-Eddy Simulation of the Taylor–Green Vortex	753
Dieter Fauconnier and Erik Dick	

Part XXVII Combustion/Supersonic Flow

Wide-Range Single Engine Operated from Subsonic to Hypersonic Conditions: Designed by Computational Fluid Dynamics	763
Ken Naitoh, Kazushi Nakamura, Takehiro Emoto, and Takafumi Shimada	

Numerical Simulations of the Performance of Scramjet Engine Model with Pylon Set Located in the Inlet	769
I.M. Blankson, A.L. Gonor, and V.A. Khaikine	

Scale Adaptive Simulations over a Supersonic Car	779
Guillermo Araya, Ben Evans, Oubay Hassan, and Kenneth Morgan	

Rotating Detonation Engine Injection Velocity Limit and Nozzle Effects on Its Propulsion Performance	789
Jian-Ping Wang and Ye-Tao Shao	

Part XXVIII Mesh Adaptation/Decomposition

Singularities in Lid Driven Cavity Solved by Adjusted Finite Element Method	799
Pavel Burda, Jaroslav Novotný, and Jakub Šístek	

A Parallel Implementation of the BDDC Method for the Stokes Flow	807
Jakub Šístek, Pavel Burda, Jan Mandel, Jaroslav Novotný, and Bedřich Sousedík	

An Adaptive Multiwavelet-Based DG Discretization for Compressible Fluid Flow	813
Francesca Iacono, Georg May, Siegfried Müller, and Roland Schäfer	

Part XXIX Micro- and Nano-Fluidics

Massively Parallel Mesoscopic Simulations of Gas Permeability of Thin Films Composed of Carbon Nanotubes	823
Alexey N. Volkov and Leonid V. Zhigilei	

Predicting Three-Dimensional Inertial Thin Film Flow over Micro-Scale Topography	833
Sergii Veremieiev, Philip H. Gaskell, Yeaw Chu Lee, and Harvey M. Thompson	

Part XXX Level Set Method

A Parallel Adaptive Projection Method for Incompressible Two Phase Flows	841
Davide Zuzio and Jean-Luc Estivalezes	

Hybrid Particle Level-Set Method for Convection-Diffusion Problems in Porous Media	847
H��lo��se Beaugendre, S. Huberson, and I. Mortazavi	

Part XXXI Technical Notes

Numerical Solution of Boundary Control Problems for Boussinesq Model of Heat Convection	857
Gennady Alekseev and Dmitry Tereshko	

Blade Design Effects on the Performance of a Centrifugal Pump Impeller	859
John S. Anagnostopoulos	

The Local Flux Correction Method	863
Bolat M. Baimirov	

Adaptive Meshes to Improve the Linear Stability Analysis of the Flow Past a Circular Cylinder	867
Iago C. Barbeiro, Julio R. Meneghini, and J.A.P. Aranha	

Migration of Species into a Particle Under Different Flow Conditions	869
Alfredo R. Carella and Carlos A. Dorao	

On the Role of Numerical Dissipation in Unsteady Low Mach Number Flow Computations	873
Yann Moguen, Tarik Kousksou, Erik Dick, and Pascal Bruel	
Unsteady Flow Around Two Tandem Cylinders Using Advanced Turbulence Modeling Method	879
Jian Liu, Zhixiang Xiao, and Song Fu	
High Order Versions of the Collocations and Least Squares Method for Navier–Stokes Equations	883
Vadim Isaev and Vasily Shapeev	
Large-Eddy Simulation of the Flow over a Thin Airfoil at Low Reynolds Number	885
Ryoji Kojima, Taku Nonomura, Akira Oyama, and Kozo Fujii	
Adverse Free-Stream Conditions for Transonic Airfoils with Concave Arcs	887
Alexander Kuzmin	
Development of a Conservative Overset Mesh Method on Unstructured Meshes	893
Mun Seung Jung and Oh Joon Kwon	
Symmetrical Vortex Fragmentation as a Vortex Element for Incompressible 3D Flow Simulation	897
I.K. Marchevsky and G.A. Scheglov	
Morphogenic Computational Fluid Dynamics: Brain Shape Similar to the Engine Flow	899
Haruka Kawanobe, Shou Kimura, and Ken Naitoh	
Computational Modeling of the Flow and Noise for 3-D Exhaust Turbulent Jets	903
S.A. Cheprasov, D.A. Lyubimov, A.N. Secundov, K. Ya. Yakubovsky, and S.F. Birch	
Numerical Simulation of Laser Welding of Thin Metallic Plates Taking into Account Convection in the Welding Pool	909
Vasily Shapeev, Vadim Isaev, and Anatoly Cherepanov	
Numerical Simulation of Cavitation Bubble Collapse Near Wall	913
Byeong Rog Shin	

Numerical Analysis of Airflow in Human Vocal Folds Using Finite Element and Finite Volume Method	917
Petr Šidlof, Bernhard Müller, and Jaromír Horáček	

Part XXXII Appendix: Papers Presented in ICCFD5 but Unpublished in “Computational Fluid Dynamics 2008”

Analysis of Free-Shear Flow Noise Through a Decomposition of the Lighthill Source Term	923
Florent Margnat, Véronique Fortuné, Peter Jordan, and Yves Gervais	

Thermal Reaction Wave Simulation Using Micro and Macro Scale Interaction Model	929
Andrey Markov, Igor Filimonov, and Karen Martirosyan	

CFD Study on Flow Field inside B.I.P.C. Steam Boilers	937
F. Panahi Zadeh and M. Farzaneh Gord	

Author Index	941
