Preface ix

1	Bone Microenvironment	1
	<i>Yingying Jing and Xiao Chen</i>	
1.1	Introduction	1
1.1.1	Cell Types	1
1.1.1.1	Genuine Bone Cells	1
1.1.1.2	Chondral-Lineage Cells	3
1.1.1.3	Adipocytes	3
1.1.1.4	Cells of the Hematopoietic Systems	4
1.1.1.5	Cells of the Immune Systems	4
1.1.2	Extracellular Matrix	7
1.1.2.1	Inorganic ECM	7
1.1.2.2	Organic ECM	7
1.2	Bone Microenvironment and Diseases	9
1.2.1	Bone Microenvironment in Osteoporosis	9
1.2.1.1	Bone Marrow Mesenchymal Stem Cells (BMSCs) and Osteoporosis	9
1.2.1.2	Osteoblasts and Osteoporosis	10
1.2.1.3	Osteoclasts and Osteoporosis	11
1.2.1.4	Bone Marrow Adipocytes (BMAs) and Osteoporosis	11
1.2.2	Bone Microenvironment in Osteoarthritis	12
1.2.2.1	Subchondral Bone and Osteoarthritis	12
1.2.2.2	Cartilage and Osteoarthritis	12
1.2.3	Bone Microenvironment in Fracture	13
1.2.3.1	Cells in Bone Microenvironment	14
1.2.3.2	Molecular Components in Bone Microenvironment	15
1.2.4	Bone Microenvironment in Osteosarcoma (OS)	17
1.2.4.1	Mesenchymal Stem Cells (MSCs) and OS Metastasis	17
1.2.4.2	Effect of Hypoxia Environment on OS Metastasis	17
1.2.4.3	Extracellular Vesicles (EVs) in the Tumor Microenvironment	17
1.3	Biomaterials and Bone Microenvironment	18
1.3.1	Biomaterials and Bone Cells	18
1.3.2	Biomaterials and Bone Hematopoietic System	21
1.3.3	Biomaterials and Bone Immune System	23
	References	26

2	Materiobiological Effects Regulate the Bone Microenvironment	43
	<i>Shuangshuang Chen</i>	
2.1	Bioactive Components Influence the Bone Microenvironment	44
2.1.1	Active Radicals	44
2.1.2	Growth Factors	47
2.1.3	Inorganic Ions	53
2.2	Physicochemical Property Influence the Bone Microenvironment	59
2.2.1	Surface Charge	59
2.2.2	Hydrophilic and Hydrophobic Property	60
2.2.3	Biodegradability	61
2.2.4	Mechanical Property	64
2.2.5	Micro-Nano Structure	64
	References	67
3	Design and Application of Biomaterials to Regulate Microenvironment for Bone Regeneration	75
	<i>Xiuhui Wang and Yingying Jiang</i>	
3.1	Natural Biomaterials for Bone Microenvironment Regulation	76
3.1.1	Proteins	77
3.1.1.1	Collagen	77
3.1.1.2	Gelatin	78
3.1.1.3	Silk Fibroin	80
3.1.1.4	Enzymes	81
3.1.2	Polysaccharide	82
3.1.2.1	Alginate	82
3.1.2.2	Chitin	82
3.1.2.3	Hyaluronic Acid (HA)	83
3.1.3	Inorganic Materials	83
3.1.4	Others	84
3.1.4.1	Cells	84
3.1.4.2	Cell Membranes	86
3.1.4.3	Extracellular Vesicles (EVs)	86
3.1.4.4	Platelet-Rich Plasma (PRP)	87
3.2	Synthetic Biomaterials for Bone Microenvironment Regulation	87
3.2.1	Metal-Based Materials	87
3.2.1.1	Immune Response Influenced by Ti-Based Implants	87
3.2.1.2	Aseptic Loosening of Ti-Based Implants	88
3.2.2	Bioactive Ceramics	88
3.2.2.1	Bioactive Ion Regulation	89
3.2.2.2	Surface Topography Regulation	91
3.2.3	Organic Polymers	93
3.2.3.1	Ultra-High-Molecular-Weight Polyethylene (UHMWPE)	93
3.2.3.2	Polylactic Acid (PLA) and its Copolymers	94
3.2.3.3	Delivering Bioactive Factors through Polymers	95
3.2.4	Composite Materials	95
	References	97

4	Fabrication Technologies of Biomaterials	107
	<i>Qin Zhang and Xue Xu</i>	
4.1	Fabrication Technologies of Biomaterials	107
4.1.1	Electrospinning Method	107
4.1.2	Three-Dimensional (3D) Printing Technology	108
4.1.3	Porogen-Based Method	111
4.2	Fabrication Technologies of Hydrogels	114
4.2.1	Physical Crosslinking	114
4.2.1.1	Ionic Interactions	114
4.2.1.2	Hydrophobic Interactions	114
4.2.1.3	Other Interactions	115
4.2.2	Chemical Crosslinked Hydrogels	116
4.2.2.1	Small Molecule Agents	116
4.2.2.2	Photo-Crosslinked Hydrogels	117
4.2.2.3	Enzyme-Induced Hydrogels	119
4.3	Fabrication Technologies of Other Biomaterials	121
	References	125
5	Mechanisms for Biomaterials Reconstruct Microenvironment in Bone Regeneration	129
	<i>Yan Wei and Mengmeng Li</i>	
5.1	Mechanical Support Effect	129
5.1.1	Mechanical Properties of Matrix and Hydrogel	131
5.1.2	Mechanical Properties of the Substrate	131
5.2	Redox Effect	133
5.2.1	Polyphenols	134
5.2.2	Smart Biomaterials	135
5.2.3	Molecular Medicine	135
5.3	Pro-angiogenesis Effect	138
5.3.1	Angiogenic Growth Factors in Pre-clinical/Clinical Trials	139
5.3.1.1	Vascular Endothelial Growth Factor (VEGF)	139
5.3.1.2	Fibroblast Growth Factor-2 (FGF-2)	140
5.3.1.3	Platelet-Derived Growth Factor (PDGF)	140
5.3.1.4	Placental Growth Factor (PlGF)	140
5.3.1.5	Insulin-Like Growth Factor (IGF)	140
5.3.1.6	Sonic Hedgehog (SHH)	141
5.3.1.7	Angiopoietins (Ang)	141
5.3.2	Delivery of Growth Factors	141
5.3.2.1	Physical Entrapment	141
5.3.2.2	Covalent Binding	142
5.3.2.3	Affinity Binding	142
5.3.2.4	Microparticles and Nanoparticles	144
5.4	Inflammatory Immune Effect	144
5.4.1	Physical Properties	146
5.4.2	Chemical Properties	147
5.5	Anti-Aging Effect	149

5.5.1	Mechanical Loading	151
5.5.2	Targeting Osteocyte Senescence with Exercise	151
	References	151
6	Biomaterials Regulating Bone Microenvironment in Clinical Application	157
	<i>Zhen Geng, Xiaoxiang Ren, and Sicheng Wang</i>	
6.1	Introduction	157
6.2	Autogenous Bone Remodeling	158
6.3	Allogeneic Bone Regeneration	161
6.4	Clinical Effect of Biomaterials	165
6.4.1	Bone tissue engineering	168
6.5	Clinical Challenges and Opportunities	169
	References	170
7	Conclusions and Perspectives	175
	<i>Ke Xu, Yan Hu, and Han Liu</i>	
7.1	Bone Microenvironment Under Physiological and Pathological Conditions	175
7.1.1	Microenvironment in Osteoporosis	176
7.1.2	Microenvironment in Osteoarthritis	176
7.1.3	Microenvironment in Fracture Site	176
7.1.4	Microenvironment in Osteosarcoma	177
7.2	Biological Effects Under Modulation of Materials	177
7.2.1	Physiochemical Properties	177
7.2.2	Bioactive Components	178
7.2.3	Micro-Nano Structure	178
7.3	Design and Application of Biomaterials in Bone Regeneration	178
7.3.1	Natural Components for Bone Metabolism	179
7.3.2	Synthetic Biomaterials	179
7.4	Fabrication Technologies	180
7.4.1	For Scaffolds	180
7.4.2	For Hydrogels	180
7.5	Microenvironment Under Biomaterial Regulation	181
7.5.1	Mechanical Support	181
7.5.2	Redox Effect	181
7.5.3	Promoting Vascularization	181
7.5.4	Inflammatory and Senescence Modulation	182
7.6	Biomaterials in Clinical Experience	182
7.6.1	Autogenous and Allogeneic Grafts	182
7.6.2	Biomaterials	182
7.6.3	Challenges and Opportunities	183
