Preface ix
Abbreviations xi

Part I – Immunoassay: Theory, practice, and patient safety 1

1 Immunochemical methods – Basic principles and definitions 3
1.1 Antibody as immunoassay reagent 3
1.2 Antigen as immunoassay reagent 7
1.3 The course of the immunochemical reaction 7
1.4 Immunoassay formats 9
1.5 Labels in immunochemical reactions 14
1.6 Separation of bound and unbound fractions 14
1.7 Other technologies based on the antigen-antibody reaction 15
1.8 Basic theory of immunoassay and patient safety 16

2 Immunoassay standardization 17
2.1 Reference materials for small molecules 17
2.2 Reference materials for proteins 18
2.3 Reference methods 19
2.4 Reference methods for heterogeneous proteins 20
2.5 Traceability 20
2.6 The uncertainty of measurement 21
2.7 Epitope as a solution for better standardization 23
2.8 Harmonization of immunoassays 24
2.9 Immunoassay standardization and the patient's safety 24

3 Immunoassay calibration and calibration curve fitting 27
3.1 Calibration process 27
3.2 Commutability problem 28
3.3 Matrix effect 28
3.4 Calibration and patient safety 29

4 Reference intervals and immunoassay 31
4.1 General problems with reference intervals for analytes measured by immunoassay 31
4.2 Limitation of different approaches to reference intervals 32
4.3 Reference intervals and patient safety 33

5 Laboratory preanalytical and analytical phase of immunoassay 35
5.1 Laboratory preanalytical factors and immunoassay 35
5.2 Blood collection devices 36
5.3 Anticoagulants 37

digitalisiert durch DEUTSCHE NATIONAL BIBLIOTHEK

5.4 Hemolysis, lipemia, hyperbilirubinemia, paraproteinemia, and immunoassay 37
5.5 Analyte stability in fresh and frozen serum samples 38
5.6 Analytical phase in immunoassay measurement 40

6 Human natural antibodies and immunoassay 43
6.1 The human immune system 43
6.2 Chemical structure of immunoglobulins 44
6.3 Antigen-combining site and complementarity-determining regions 45
6.4 Genes for immunoglobulin variable regions 46
6.5 Diversification of immunoglobulins *in vivo* 47
6.6 Natural antibody against exogenous (nonself) and endogenous (self) antigens 48
6.7 Natural antibodies and patient safety 51

7 Immunoassay interference – How to recognize, eliminate, or reduce it 53
7.1 Definition and prevalence of interference in immunoassay 53
7.2 Cross-reactivity versus interference in immunoassay 54
7.3 Analyte specific and nonspecific binding proteins as a source of interference in immunoassay 59
7.4 Autoantibodies as a source of interference 63
7.5 Nonimmune IgG complexes as a source of interference 66
7.6 Interference from heterophilic antibodies 69
7.7 Detection of heterophilic antibodies in the patient's sample 78
7.8 Methods used for removal or inactivation of interfering heterophilic antibodies 89
7.9 High-dose effect (hook effect, prozone effect) 92
7.10 Low-dose hook effect 95
7.11 Interference from heterophilic antibodies and patient safety 96
7.12 Interpretation of immunoassay results is an art 97

8 Immunoassay and patient safety 103
8.1 Fallibility of immunoassays 103
8.2 Know your immunoassay 105
8.3 Basic knowledge on critical points in immunoassay for physicians 110
8.4 Immunoassay in research 113
8.5 Who is responsible for the patient's safety? 113

Part II – Immunochemistry measurements in practice: Examples of problems in some current immunoassays 115

Example 1 Parathyroid hormone (PTH) – Heterogeneity as a major problem in PTH measurement by immunochemistry 117
Example 2 Human chorionic gonadotropin (hCG) – Problems of heterogeneity and lack of standardization 123

Example 3 Troponin measurement by immunoassay – Problem of low assay sensitivity and interference from heterophilic antibodies 129
Example 4 Aldosterone and proteolytic renin activity (PRA) – Are they useful together? 137
Example 5 Thyroglobulin measurement – Autoantibody problem 141
Example 6 Prolactin measurement by immunoassay – Heterogeneity and macroform problems 145
Example 7 Thyroid function tests – Most frequently measured and most difficult to interpret: Reference interval for thyroid-stimulating hormone (TSH) and problems of free thyroid hormone fraction measurement 149
