Preface xv

1	Introduction to Electrochemical Cells	1
	<i>R. Vasant Kumar and Thapanee Sarakonsri</i>	
1.1	What are Batteries?	1
1.2	Quantities Characterizing Batteries	4
1.2.1	Voltage	4
1.2.2	Electrode Kinetics (Polarization and Cell Impedance)	8
1.2.2.1	Electrical Double Layer	8
1.2.2.2	Rate of Reaction	8
1.2.2.3	Electrodes Away from Equilibrium	9
1.2.2.4	The Tafel Equation	9
1.2.2.5	Example: Plotting a Tafel Curve for a Copper Electrode	10
1.2.2.6	Other Limiting Factors	12
1.2.2.7	Tafel Curves for a Battery	13
1.2.3	Capacity	14
1.2.4	Shelf Life	15
1.2.5	Discharge Curve/Cycle Life	15
1.2.6	Energy Density	16
1.2.7	Specific Energy Density	16
1.2.8	Power Density (Wh g^{-1})	17
1.2.9	Service Life/Temperature Dependence	18
1.3	Primary and Secondary Batteries	18
1.4	Conclusions	19
	References	20
2	Primary Batteries	21
	<i>Thapanee Sarakonsri and R. Vasant Kumar</i>	
2.1	Introduction	21
2.2	The Early Batteries	23
2.3	The Zinc/Carbon Cell	25
2.3.1	The Leclanché Cell	25
2.3.2	The Gassner Cell	25

2.3.3	Current Zinc/Carbon Cell	27
2.3.3.1	Electrochemical Reactions	28
2.3.3.2	Components	29
2.3.4	Disadvantages	30
2.4	Alkaline Batteries	30
2.4.1	Electrochemical Reactions	31
2.4.2	Components	33
2.4.3	Disadvantages	34
2.5	Button Batteries	34
2.5.1	Mercury Oxide Battery	34
2.5.1.1	Electrochemical Reactions	35
2.5.2	Zn/Ag ₂ O Battery	36
2.5.2.1	Electrochemical Reactions	37
2.5.3	Metal–Air Batteries	37
2.5.3.1	Zn/Air Battery	38
2.5.3.2	Aluminum/Air Batteries	40
2.6	Li Primary Batteries	41
2.6.1	Lithium/Thionyl Chloride Batteries	42
2.6.2	Lithium/Sulfur Dioxide Cells	43
2.7	Oxyride Batteries	43
2.8	Damage in Primary Batteries	44
2.9	Conclusions	46
	References	46
3	A Review of Materials and Chemistry for Secondary Batteries	49
	<i>R. Vasant Kumar and Thapanee Sarakonsri</i>	
3.1	The Lead–Acid Battery (LAB)	51
3.1.1	Electrochemical Reactions	52
3.1.2	Components	54
3.1.3	New Components	56
3.2	The Nickel–Cadmium Battery	58
3.2.1	Electrochemical Reactions	60
3.3	Nickel–Metal Hydride (Ni–MH) Batteries	61
3.4	Secondary Alkaline Batteries	62
3.4.1	Components	62
3.5	Secondary Lithium Batteries	62
3.5.1	Lithium-Ion Batteries	63
3.5.2	Li–Polymer Batteries	67
3.5.3	Lithium/Air Batteries	68
3.5.4	Evaluation of Li Battery Materials and Chemistry	69
3.6	Battery Market	71
3.7	Recycling and Safety Issues	72
3.7.1	Recycling of Lead–Acid Batteries	73
3.7.2	Details on the Recycling Process of Lead–Acid Batteries	75

3.8	Conclusions	80
	References	80
4	Applications of Lithium Batteries	83
	<i>Haokun Deng and Katerina E. Aifantis</i>	
4.1	Portable Electronic Devices	83
4.2	Hybrid and Electric Vehicles	86
4.3	Aerospace Applications	94
4.4	Medical Applications	97
4.4.1	Heart Pacemakers	97
4.4.2	Neurological Pacemakers	98
4.5	Grid Energy Storage	99
4.6	Conclusions	101
	Acknowledgments	101
	References	102
5	Cathode Materials for Lithium-Ion Batteries	105
	<i>Pu Hu, Lintao Dou, Tao Huang, and Aishui Yu</i>	
5.1	Layered Materials	105
5.1.1	LiCoO ₂	105
5.1.2	Nickel-Rich Materials	107
5.1.3	Excess Manganese Oxide Layered Cathode Materials	113
5.2	Spinel Materials	116
5.3	Polyanion (Phosphate, Silicates) Framework Cathode Materials	119
5.3.1	LiMPO ₄ Olivine Crystal Structure and Intercalation Mechanism	120
5.3.2	LiMSiO ₄ Orthosilicate Crystal Structure and Intercalation Mechanism	120
5.3.3	Factors to Improve Electrochemical Performance of LMxO ₄	121
5.4	Conclusions	123
	References	123
6	Next-Generation Anodes for Secondary Li-Ion Batteries	127
	<i>Katerina E. Aifantis, Utkarsh Ahuja, Yanhong Wang, and Hong Li</i>	
6.1	Introduction	127
6.2	Mechanical Instabilities During Electrochemical Cycling	130
6.3	Nanostructured Anodes	133
6.4	Sn-Based Materials	133
6.4.1	Sn-Based Conversion Reaction Materials	134
6.4.2	Sn-Based Alloys	136
6.4.3	Sn-C Nanocomposites	140
6.4.4	Sn-Based Nanofiber/Nanowire Anodes	143
6.5	Si-Based Materials	145
6.5.1	Si-Films Anodes	147
6.5.2	Si-Nanowire Anodes	153
6.5.3	Si Microparticle Based Porous Electrodes	155
6.5.4	Si/C Nanocomposites and other Si Nanoconfigurations	155

6.5.5	Si/Polymer Nanocomposites	159
6.5.6	Binders	162
6.5.7	Si-SiO ₂ -C Composites	163
6.6	Other Anode Materials	165
6.6.1	MXene Electrodes	166
6.6.2	Sb-Based Anodes	167
6.6.3	Al-Based Anodes	169
6.6.4	Bi-Based Anodes	170
6.6.5	LiTiO-Based Anodes	172
6.6.6	Metal Oxide-Based Anodes	172
6.7	Solid-State Batteries	173
6.8	Conclusions	173
	Acknowledgments	174
	References	174

7 Electrolytes for Lithium Batteries: The Quest for Improving Lithium Battery Performance and Safety 187

Claudio Capiglia

7.1	Introduction	187
7.2	Nonaqueous Electrolytes	188
7.2.1	The Solid-Electrolyte Interface (SEI)	189
7.2.2	Current Collector Corrosion	190
7.2.3	Solvents for Nonaqueous Electrolytes	191
7.2.4	Salts for Nonaqueous Electrolytes	193
7.2.4.1	Lithium Perchlorate (LiClO ₄)	194
7.2.4.2	Lithium Tetrafluoroborate (LiBF ₄)	194
7.2.4.3	Lithium Hexafluoroarsenate (LiAsF ₆)	194
7.2.4.4	Lithium Hexafluorophosphate (LiPF ₆)	195
7.2.4.5	Lithium Trifluoromethanesulfonate (Li(CF ₃ SO ₃))	195
7.2.4.6	Lithium Bis(trifluoromethanesulfonyl)imide (Li[N(CF ₃ SO ₂) ₂] or LiTFSI):	195
7.2.4.7	Lithium Bis(perfluoroethylsulfonyl)imide (Li[NC(C ₂ F ₅ SO ₂) ₂] or LiBETI)	196
7.2.4.8	Lithium Tris(trifluoromethanesulfonyl)methide (Li[C(CF ₃ SO ₂) ₃] or LiTFSM)	196
7.2.4.9	Lithium Tris(perfluoroethyl)trifluorophosphate (Li[PF ₃ (CF ₃ CF ₂) ₃] or LiFAP)	197
7.2.4.10	Lithium Fluoroalkylborate (Li[BF ₃ (CCF ₃ CF ₂)] or LiFAB)	197
7.2.4.11	Lithium Nonafluorobutylsulfonyltrifluoromethylsulfonylimide (Li[N(C ₄ F ₉ SO ₂)(CF ₃ SO ₂) ₃] or LiFBMSI): LiFBMSI:	198
7.2.4.12	Lithium B(oxalato)borate (Li[B(C ₂ O ₄) ₂] or LiBOB)	198
7.2.5	Additives for Nonaqueous Electrolytes	198
7.2.5.1	Reductive Additives	199
7.2.5.2	Polymerizable Additives for Graphite-based Anode	199
7.2.5.3	Reaction Additives for Graphite-based Anode	199

7.2.5.4	Absorption Additives for Graphite-based Anode	202
7.2.5.5	Surface Modifier Additives for Graphite-based Anode	202
7.2.5.6	Protective Additives for Cathode	202
7.2.5.7	LiPF ₆ Additives to Stabilize Salt Decomposition	203
7.2.5.8	Shuttle Additives	203
7.2.5.9	Shutdown Additives	203
7.2.5.10	Fire-Retardant Additives	203
7.2.5.11	Additives to Reduce Lithium Plating	204
7.2.5.12	Additives to Increase the Transport Number	204
7.2.5.13	Additives for Hindering Aluminum Current Collector Corrosion	204
7.2.5.14	Additives to Improve the Wetting of Separator	204
7.3	Gel Polymer Electrolytes	205
7.3.1	Gel Polymer Electrolyte Based on Copolymer PVDF-HFP	206
7.3.2	Gel Polymer Electrolyte with Ionic Liquid	209
7.4	Solid-State Batteries	210
7.4.1	First-Generation Solid-State Batteries	210
7.4.2	Second-Generation Solid-State Batteries	210
7.5	Solid-Polymer Electrolytes	212
7.5.1	The Advantage and the Query for the New Polymeric Materials for Polymer Electrolytes	214
7.5.2	Polymer Composite Electrolytes	217
7.6	Solid Electrolytes	219
7.6.1	Solid-State Electrolyte Issues	220
7.6.2	NASICON-Type Lithium Electrolytes	221
7.6.2.1	NASICON-Type Lithium Electrolytes for Lithium-Air Batteries	221
7.6.2.2	NASICON-Type Lithium Electrolytes for Lithium Aqueous Batteries	222
7.6.3	Glass Electrolytes	222
7.6.4	Glass-Ceramics Electrolyte	223
7.6.5	LGPS Family	224
7.7	Solid-State Battery Companies	225
7.8	Conclusions	226
	Acknowledgment	227
